

Chiller

AQL/AQH 40 to 75

Air Cooled Water Chillers
Cooling Only and Heat Pump
Engineering Data Manual

40.0 to 75.8 kW

39.9 to 77.2 kW

Outstanding Strength Points

- R410A Refrigerant.
- New simpler refrigerant circuit layout.
- Efficiency class B and C.
- Low sound level for BLN unit, very low sound level for ELN unit.
- Great accessibility to internal components for service operations.
- New display on external panel allows the complete control of the unit.
- More assembling quality.
- Construction easier.
- Operating limit of the unit stored in the flash memory of the control logic.
- Wide operating limits.
- High temperature operating limits.
- Less noisy compared to the unit with R407C.
- Less number of screws and piece of sheet metal.
- Component standardization (symmetric sheet metal, only 2 kinds of screws ...).
- New gauge kit can be fitted directly inside the units and not outside. This gauge kit is cheaper than R407C one and it is common for the whole range.
- Fan speed control for low ambient operation in cooling mode down to -18 °C.
- Units are suitable for low water temperature applications with leaving water temperature of -8 °C (min).
- ModBus interface.
- Phase sequence monitor supplied as standard.
- User-friendly microprocessor control.
- ILTC (Intelligent Liquid Temperature Control) controller that allows to reduce the need of an external water tank.
- Leaving water temperature control logic now available.
- For safety during service operations, special valves dedicated to R410A are available on the refrigerant system. These valves, of 5/16" flare SAE type, are mounted on the liquid line inside and on the lateral panel of the unit. This facilitates the access to the high and low side of the refrigerant circuit in order to do pressure measurement.
- Double water set point.
- Rubber pad supplied as standard.
- Water filter and flow switch supplied as standard.
- Optional plug and play hydraulic kit for last minute configuration equipped with 1 or 2 pump(s). Pumps can be supplied with or without buffer tank.
- Optional electric heaters fitted inside buffer tank to ensure extra heating.
- Double automatic air vent (only for unit with pumps).
- Victaulic connection and Victaulic valves that allow fast connection.
- Double 3/8" valve on water pipes for pressure measurement and water charge/discharge.
- New anti-vibration kit, easier to be installed (same spring for every corner).
- Special Inverter Fan (SIF) version suitable for a widening of operating conditions, like ducted installation where high static pressure is needed or high ambient air temperature installation. Fan speed will be regulated by condensing pressure.
- Smaller footprint. The units are 100 mm thinner in order to simplify the transport operation.
- Extra low noise version now available.
- Desuperheater now available as option.
- Smart hook in the electrical panel that keeps in position the closing panel while the operator is working on the electrical box.
- Refrigerant circuit completely enclosed in a separated box in order to reduce the noise, not only of the compressors but also of the whole circuit.

Specifications

General

The new air cooled water chillers have been designed and optimized to operate with **R410A** refrigerant fluid. They are available in **cooling only (AQL)** and **heat pump (AQH)** versions.

Each version consists of **6 sizes (40, 45, 50, 60, 65 & 75)** and covers a nominal cooling capacity range from **40.0 to 75.8 kW** and a nominal heating capacity range from **39.9 to 77.2 kW**.

All units are equipped **two scroll compressors fitted in tandem** for adapting to partial system loads.

The general operation status of the machine is continuously under the control of an **ILTC microprocessor based controller**.

The AQL and AQH units can operate **without water tank**, thanks to the ILTC microprocessor that implements an **auto-adaptive control logic** ensuring a total protection of the compressors at different load or water volume conditions. The minimum water volume requested is **2.5 l/kW**.

However, an **on board water tank with one or two pumps** can be supplied as option. Pumps (1 or 2) can also be supplied without water tank.

A **fan speed controller** can be supplied loose as field-installed accessory to authorize the unit to operate in cooling mode at low ambient temperature.

Both AQL and AQH units can be supplied in **3 versions** :

- **Base Low Noise (BLN)** : This version is equipped with delta connected fan motors.
- **Extra Low Noise (ELN)** : This version is equipped with star connected fan motors which allow the unit to operate with a very low rpm. Compressor sound proof jackets are also supplied as standard on this version.
- **Special Inverter Fan (SIF)** : This version is equipped with inverter fan that allows the unit to be used as ducted or high ambient temperature unit thanks to the high static pressure and the high air flow provided by inverter fan.

In addition, all the units can be delivered with an **optional desuperheater** which allows to recover the 20% of the heat rejection.

Cabinet and structure

The cabinet and structure are made of heavy gauge galvanized steel. **All galvanized steel components are individually painted** by a special painting process before the assembly of the unit. This painting system performs a homogeneous protection to the corrosion.

The painting is a polyester powder based type, coloured in **RAL 9001**.

The units are suitable for outdoor installation, directly on the building roof or at the ground level.

Specifications (continued)

Compressors

Each unit is equipped with **two scroll** compressors fitted on a rail and assembled together to form **tandem** compressors. The compressors are then mounted on rubber pads in order to eliminate noise and vibration transmissions.

The compressor motors have a direct start-up. Each motor is cooled by the refrigerant gas and is equipped with an overload protection.

A soft start system can be supplied as optional, whereas a **phase sequence monitor** is supplied as standard.

Evaporator

The evaporator is a stainless steel plate heat exchanger insulated with closed cell synthetic foam. It is protected by a **35 W anti-freeze electric heater** to ensure a good protection against freezing at low ambient temperature (-10 °C min.) when the unit is switched off.

Maximum working pressure is 10 bar at water side and 45 bar at refrigerant side.

Condenser

The condenser is a finned coil constructed with seamless copper tubes mechanically expanded into aluminium fins. According to the unit version, tubes and fins have different design.

The condenser coil of cooling only version (AQL units) is composed of **internally smooth tubes with louvered fins** to improve the heat transfer. That of heat pump version (AQH units) consists of **internally grooved tubes with corrugated fins** to allow the water flowing during de-icing cycles.

The air cooled condenser is supplied with a protective grille as standard.

Condenser fans and motors

Each unit has one axial fan, of fixed speed type with diameter of 800 mm. According to the version, the fan is cabled in order to have **high speed** (700 to 900 rpm) for BLN version and **low speed** (530 to 680 rpm) to reduce the sound level for ELN version.

The fan motor has IP54 grade and is equipped with a thermal overload protection.

A pressure actuated fan speed controller can be supplied as field-installed accessory or factory-fitted option. It allows the unit to operate in cooling mode at ambient temperature down to -18 °C because it regulates the fan speed in order to maintain constant the condensing temperature.

On the SIF version, the fan is controlled by a 0-10 V DC signal that regulates the speed from 0 to 1110 rpm. This special fan allows the unit to be used in two applications :

- **High ambient temperature** : The fan provides high air flow at maximum speed in order to keep a low condensing temperature while operating at high air temperature.
- **Ducted installation** : The fan provides high static pressure in order to allow the unit to be ducted.

The SIF fan can also be evolved in order to avoid the use of a fan speed controller.

All types of fans are fitted with a protective grille on top.

Refrigerant circuit

All units have one refrigerant circuit consisting of scroll tandem compressors, plate heat exchanger, thermostatic expansion valve, 4-way reverse cycle valve (heat pump version only), condenser coil, as well as safety and control devices, such as : high pressure switch, high/low pressure transducers and PED safety valve.

Inspection on refrigerant via a sight glass can be done during service operations, by removing a panel from the side, without disturbing the unit operating conditions.

A gauge kit can be supplied as a common accessory for all sizes to be installed inside the unit in order to read the high and low pressure values.

All refrigerant components are shown in the functional diagrams illustrated in the next pages, section "Refrigerant flow diagrams".

Hydraulic circuit

Thanks to the design flexibility on the hydraulic circuit, all the units can be configured in several ways :

- **BASIC** unit : Unit is **without pump and tank**. The hydraulic circuit contains the following components : water filter, flow switch, 3/8" in/out water valves, water safety valve, automatic air vent, hydrometer and Victaulic connections (allowing quick connections in order to update the circuit with buffer tank and pumps). All water piping is covered with **19 mm thick insulation**.
- **1P : 1-Pump** unit having same equipment as BASIC one + **a pump** with available static pressure of 150 kPa. Two air vents are supplied for this configuration.
- **1PT : 1-Pump + Tank** unit having same equipment as 1P one + **a buffer tank** to be installed inside the unit. The tank is covered with 10 mm thick polyethylene insulation and is fitted with a **200 W antifreeze heater**.
- **2P : 2-Pump** unit having same equipment as BASIC one + **2 pumps** with available static pressure of 150 kPa. Each pump can be isolated and replaced with the help of two Victaulic valves. A non-return valve is provided to protect each pump from pumping water in the discharge pipe of the other pump. Two air vents are also supplied for this configuration.
- **2PT : 2-Pump + Tank** unit having same equipment as 2P one + **a buffer tank** to be installed inside the unit. The tank is covered with 10 mm thick polyethylene insulation and is fitted with a **200 W antifreeze heater**.

In pump equipped unit, the head of the pump is insulated with a **19 mm thick insulation** to avoid condensation on it.

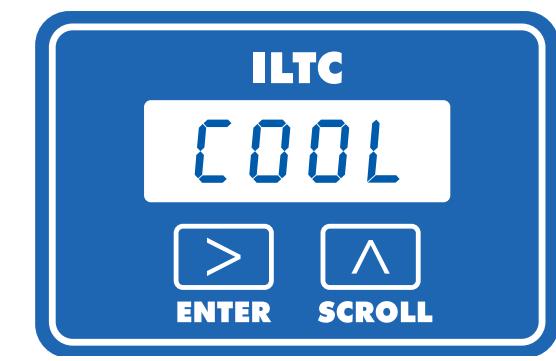

Water connections are 2" male gas threaded type.

Control panel

The units are fitted with an external control panel that displays the operating parameters and alarms. This control panel is **accessible from outside** without removing any parts because it is placed on an external panel. A Plexiglas cover protects the control from external agent.

The AQL/AQH chillers are equipped with a microprocessor based control with ILTC logic that implements an intelligent control on either **entering water temperature** or **leaving water temperature**.

ILTC user interface

Specifications (continued)

The main features of this control system are :

- User-friendly : with only 3 buttons and a tree logic, it is possible to control the unit easily,
- Reliable : all indications on the display are visible in every weather conditions,
- Test procedure,
- Alarm visualization with a logging of the last 10 alarms,
- Remote ON/OFF switching,
- Compressor and pump working hour counter,
- Pressure transducers to control discharge and suction temperatures,
- Maximum discharge temperature control,
- Part load operating mode,
- Remote Cooling /Heating mode switching,
- Compatibility with BMS (RS485 ModBus protocol),
- Compressor operating limits stored in a flash memory.

Control and safety devices

Each unit is complete with the following safety and control devices :

Safety :

- Fan motor overload protection,
- Compressor motor overload protection,
- Flow switch,
- High pressure switch,
- High and low pressure transducers,
- Evaporator antifreeze electric heater,
- Crankcase oil electric heater,
- 45 bar refrigerant safety valve,
- 3 bar water safety valve.

Control :

- Entering water temperature sensor,
- Leaving water temperature sensor,
- Coil temperature sensor,
- Discharge temperature sensor,
- Air temperature sensor,
- Suction and discharge pressure transducers.

Conformity with standards

All AQL/AQH units are in compliance with the following standards :

- ✓ Machine Directive : 2006/42/EC
- ✓ Low Voltage Directive : 2006/95/EC
- ✓ Electromagnetic Compatibility Directive : 2004/108/EC
- ✓ Pressure Equipment Directive : 97/23/EC

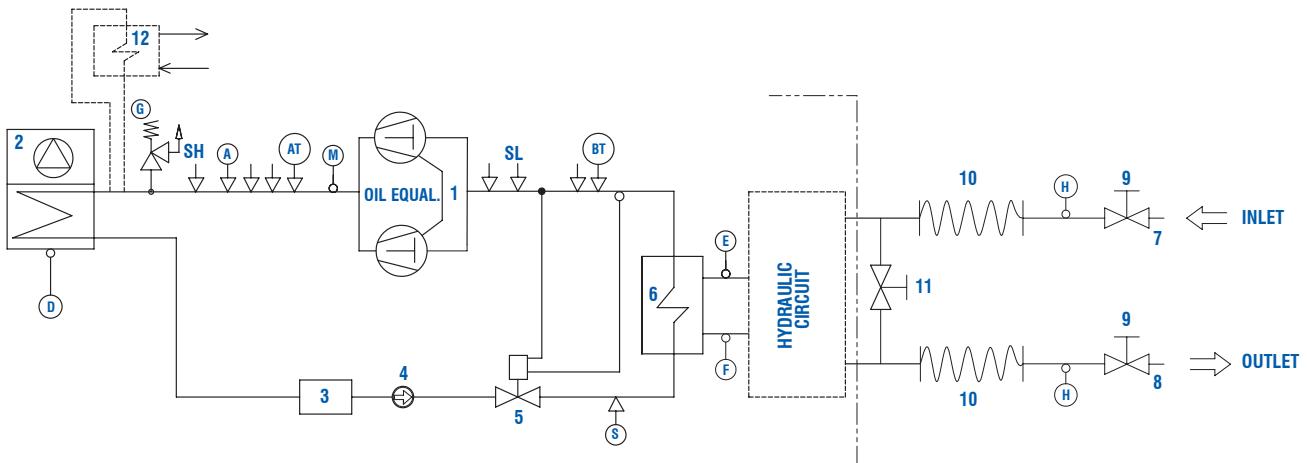

Factory-installed options

- Blue fin coil,
- Coil with "Fin Guard Silver" treatment,
- Coil with black epoxy treatment,
- Desuperheater,
- Soft starter,
- Power supply without neutral kit,
- Automatic circuit breaker,
- Compressor overload protection,
- Hydraulic options (1P, 2P, 1PT, 2PT),
- Electric heaters (12, 24 or 36 kW) inside buffer tank to ensure extra heating,
- Fan speed control kit (this kit is standard on desuperheater version).

Field-installed accessories

- Antivibration kit,
- Fan speed control kit (this kit is standard on desuperheater version),
- Gauge kit,
- Remote On/Off control,
- ModBus protocol kit for BMS,
- Power factor correction capacitors,
- Sequencer for up to 4 chiller installation,
- In/Out valve kit,
- Compressor soundproof jackets (this option is standard on ELN version).

Sound pressure level calculated at a distance of 10 metre. Sound pressure levels refer to ISO standard 3744 with parallelepiped shape.

* Sound data referred to a fan speed of 1110 rpm.

Compressor jacket (standard on ELN) can be ordered as accessory. Compressor jacket impact = -2 dB(A).
