## 6. DISASSEMBLY PROCESS

# **AIRSTAGE™ V-III**

Variable Refrigerant Flow System

## **1. TEST RUN**

# 1. TEST RUN

## 1-1 EXECUTION PROCEDURE AND EXECUTION PRECAUTIONS

### Before execution

| Execution zone decision           | Execution procedure and precautions  | Reason   |
|-----------------------------------|--|--|
| Confirmation of refrigerant used  | ① Check the characteristics of the refrigerant used and grasp the special features of the refrigerant. If refrigerant must be charged, always charge the refrigerant specified for the product.<br>R410A 4.2 MPa | • Use of a refrigerant other than the specified refrigerant will invite equipment trouble. |
| Preparation of execution drawings | ② Confirm the product design pressure.   |  |
| Confirmation of installation site | ① Use new refrigerant piping of the thickness specified by the D&T manual.   | • Secure the necessary pressure resistance.  |
| Preparations before execution     | ② Since R410A dedicated tools are necessary, prepare them in advance.<br>③ Absolutely avoid use of existing piping. If use of existing piping is unavoidable, the piping must be cleaned.                        |  |

### Execution

|  |  |   |
|--|--|---|
| Sleeve and insert work   | Always use a level and keep the indoor unit level.<br>If the equipment is tilted toward the drain port, install it so that the tilt is within 10mm. Excessive tilt will cause water leakage.   | • Prevention of water leakage   |
| Indoor unit installation   | When performing piping work, observe the following items so that the inside of the piping is clean and air tight.  | • Foreign matter, water, etc. in the piping will cause faulty cooling and compressor trouble.   |
| Refrigerant piping work  | ① Use pipe that is not dirty inside.<br>② When the pipe is left standing, protect it.<br>③ Finish flaring exactly.   | • Refrigerant leakage will cause low performance and abnormal stopping.   |
| Drain piping work  | ④ Confirm the width across flats dimension and shape of flare nuts.<br>⑤ Always blow nitrogen while brazing.<br>⑥ Perform flushing before connecting the equipment.  |   |
| Duct work  | ① Always make the downward slope of the drain pipe 1/100 or greater and make the horizontal length within 20m.   | • Prevention of water leakage   |
| Heat insulation work   | ② Use hard polyvinylchloride pipe as the drain pipe.<br>③ Support the drain pipe between 1.5 to 2.0m.<br>④ Use pipe of 1 rank up (VP30 or greater) as central piping.  |   |
| Electrical work  | Select the size of the heat insulating material according to the ambient temperature and relative humidity of the refrigerant.<br>Use a heat insulating material having a heat conductivity of 0.043W/(m·k) or less.   | • Prevention of water leakage   |
| Foundation work for products   |  |   |
| Products installation work<br><small>*Refer to warning or caution in the attached installation manual of each products</small> | When making flare connections always use a torque wrench and tighten the flare nut positively to the specified torque.   | • Refrigerant leakage will cause low performance and abnormal stopping.   |
| Refrigerant piping connection work   | Pressurize the product with nitrogen gas up to the design pressure and conduct a 24Hr air tightness test.  | • Refrigerant leakage will cause low performance and abnormal stopping.   |
| Air tightness test   | ① Install a vacuum pump with reverse flow check mechanism or a reverse flow check adaptor to a conventional vacuum pump and use.<br>② Pump down sufficiently.<br>Approximately 1 hour or longer after -0.10MPa reached.<br>Allow to stand for approximately 1 hour after stopping the vacuum pump and confirm that the needle does not return. | • Mixing in of vacuum pump oil by reverse flow will cause equipment trouble.<br>• Prevents degradation of the oil by completely removing water and air. |
| Vacuum drying  | ③ Air purging using refrigerant is strictly prohibited.  | *recommend the vacuuming mode   |

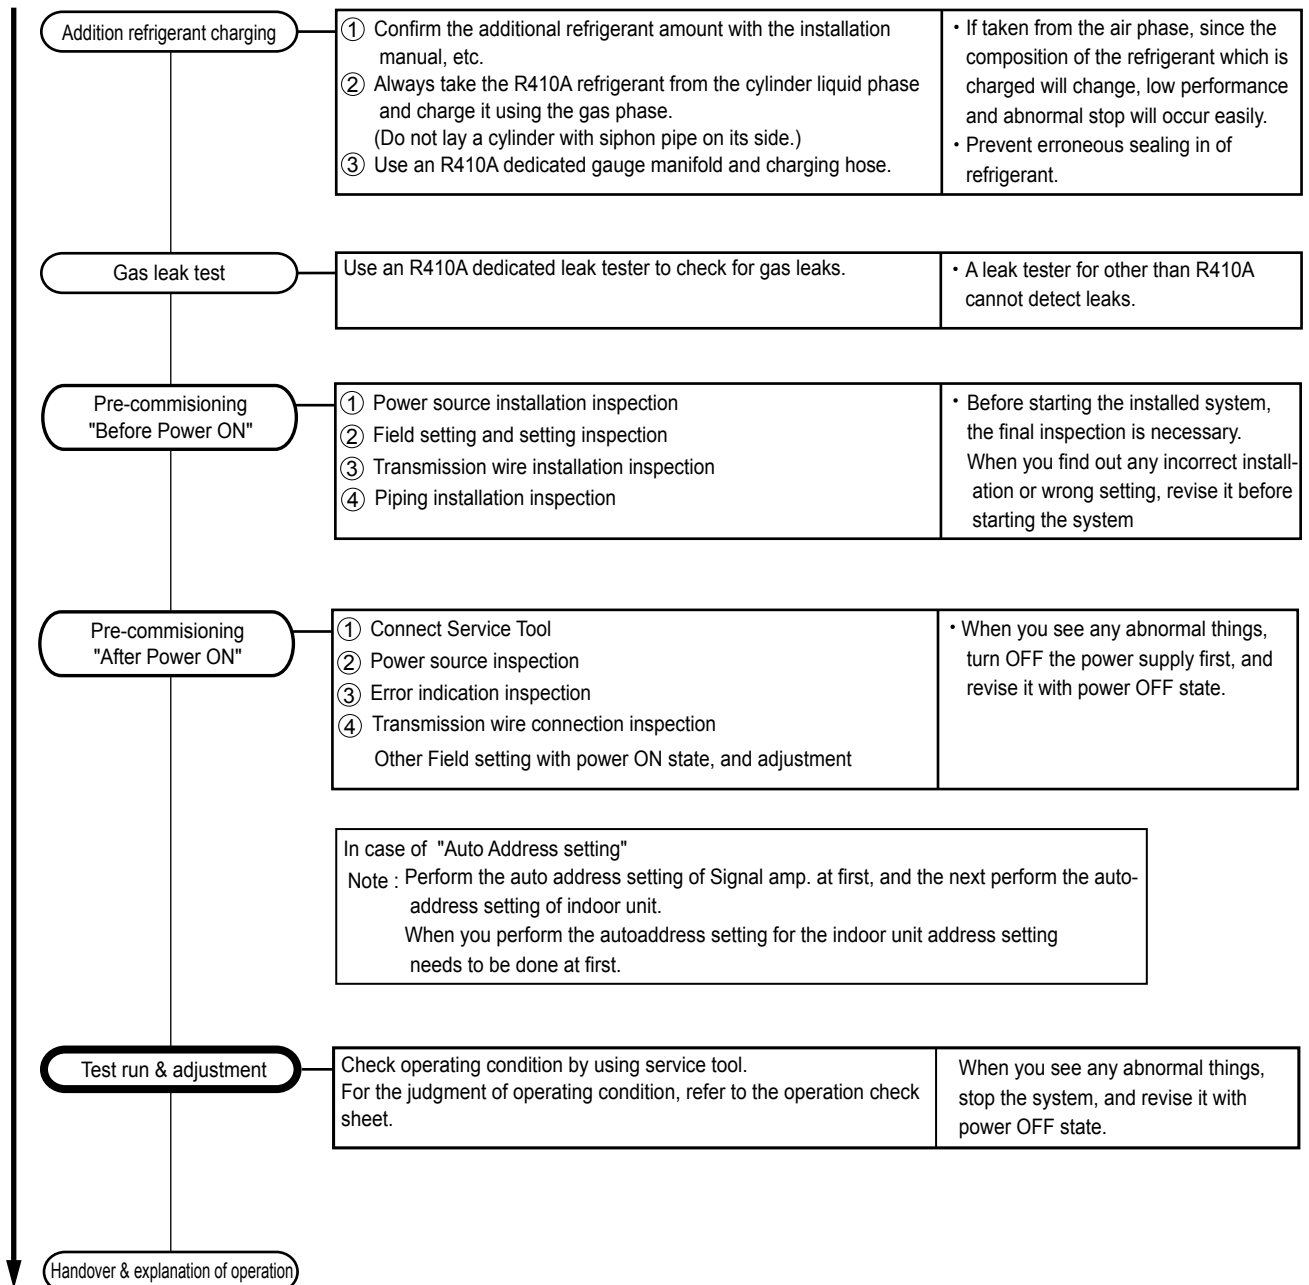

#### \* Vacuuming mode

This function is used for vacuuming the indoor unit and the connection piping.  
Note: For starting Vacuuming mode, the refrigerant address setting has to be finished.

When the [vacuuming mode] is set, <Push switch setting, F3:21> EEV of connected all indoor units opens.  
So, the vacuuming indoor unit and piping becomes easier.

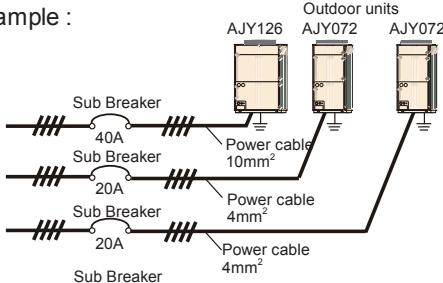

When the vacuuming ends, please turn off the power supply for all of the indoor units, and outdoor unit, [vacuuming mode] is released.

## Execution

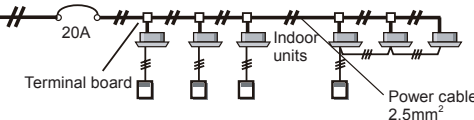

## 1-2 Check Items Before Power ON

### 1-2-1 Power source Inspection sheet

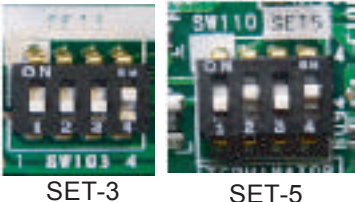

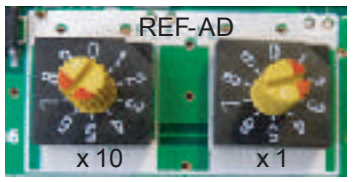

| Check Item  | Check contents                          | Judgement  | Present Status   |
|---|---|--|--|
| Ref. circuit name: _____  |   |  |  |
| Power Source  | Outdoor Unit                            | Power supply   | 3 $\phi$ / 4W / (342 - 456V) / 50Hz<br><input type="checkbox"/> Yes / <input type="checkbox"/> No        |

## 1-2-4 Transmission wire installation inspection sheet 2/3

| Check Item  | Check contents | Judgement                      | Present Status  |   |
|---|----------------|--------------------------------|---|---|
| Number of ref. circuit connected in the network system: _____, Ref. addresses: _____(00 ~ 99) |                |                                |   |   |
| VRF Network System  | Network wiring | Total transmission line length | Wiring length ≤ 3600m<br>(Value taken from Network Design Drawing)<br>(m) |   |
|   |                | Network wiring layout          | Do not make a loop configuration  | <input type="checkbox"/> Looped / <input type="checkbox"/> Not looped |
|   |                | No. of network segment (*1)    | No. of network segment ≤ 41   |   |

(\*1) Create one Network Segment based on the following conditions,

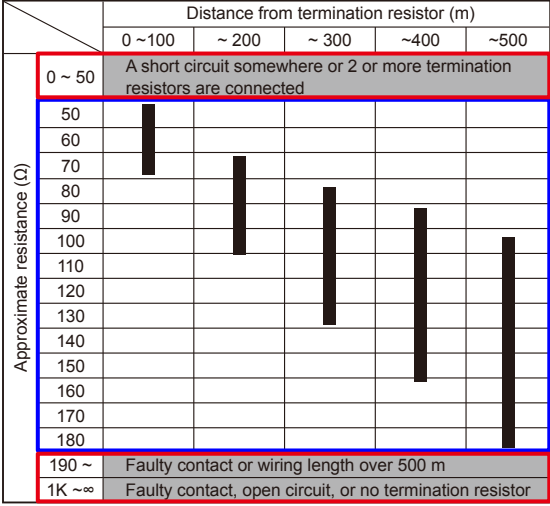

Condition -1: if the transmission line length ≤ 500m

Condition -2: if a total number of connected units ≤ 64 connected units (\*2)

(\*2) connected units mean a total of ( Indoor Units + Master Outdoor Units + TPC Units + System Controller Units  
+ Network Converter for LonWorks Unit + Central RC Units + Network Converter Units  
+ BACnet Gateway Unit + Signal Amplifier Units + Service Tool Unit + Web Monitoring Tool Unit)

| Outdoor Unit  | 3-way valves opening | 3-way valve of each OU at<br>- Discharge pipe side<br>- Suction pipe side<br>- Liquid pipe side | Master OU ( all 3-way valve must be full open ) | <input type="checkbox"/> Yes / <input type="checkbox"/> No |                |
|   |                      |   | Slave1 OU ( all 3-way valve must be full open ) | <input type="checkbox"/> Yes / <input type="checkbox"/> No |                |
|   |                      |   | Slave2 OU ( all 3-way valve must be full open ) | <input type="checkbox"/> Yes / <input type="checkbox"/> No |                |

## 1-3 Check Items After Power ON

### Overview of system operation check procedure

**Step-1:** Connect Service Tool PC to the VRF V-III system.

Do scanning of refrigerant system which should be commissioned.

**Step-2:** Compare the number of installed units (OU and IU) with the System List data obtained from the Service Tool.

**Step-3:** Operate all Indoor Units under Test Mode Cooling (Select Test mode either cool or heat based on ambient temperature.).

Step-3-1: During operation, check the IU thermistor value

Step-3-2: After 1-hour operation, check the Refrigerant System

**Step-4:** After 1-hour Test run operation (excluding special operation),

Step-4-1: Switching the operation mode of IU from cool to heat.

- Check the IU thermistor value

Step-4-2: When all IUs run under heating, continue operation minimum 15min. And check the Refrigerant system

## 1-4 Test Run Operation

### 1-4-1 Test Run From Outdoor unit PC Board

All the indoor units connected to the outdoor unit can be test-operated by push button setting. (Only for master unit)

#### ● SWITCH POSITION

#### ● TEST RUN SETTING

For a detailed description of push button operation, refer to the [D&T manual Chapter 6. SYSTEM DESIGN]

##### < Monitoring condition >

(1) Press the MODE / EXIT button ( SW107 ) once.

##### < Mode select condition >

##### < Fuction select condition >

##### < Pursuance completion >

(6) Press the ENTER button ( SW109 ) or Time out ( 5 seconds)

##### < Return to mode select condition >

(7) Press the MODE / EXIT button

##### < Return to monitoring condition >

example,  
Normal indicate : [ Cooling mode ]

## 1-4-2 Test Run From Remote Controller

### 1. Standard wired remote controller

Stop the indoor unit. Push the  button and  button simultaneously for more than two seconds. The air conditioner will start to conduct a test run and "a i" will display on the remote controller display.

However, the  ,  setting button does not have function, but all other buttons, displays, and protection functions will operate.

- Perform the test operation for 60 minutes.
- To stop test run, push the START / STOP button of the standard wired remote controller.
- For the operation method, refer to the operating manual and perform operation check.
- Check that there are no abnormal sounds or vibration sounds during test run operation.

### 2. Standard wireless remote controller

- Short two metal contacts under the battery compartment lid, while the air conditioner is running.
- To stop test run operation, push  button of the wireless remote controller.

When the air conditioner is being test run, the OPERATION and TIMER lamps of indoor unit flash slowly at the same time.

### 3. Simple remote controller

Stop the indoor and outdoor units. Push the remote controller  button and  button simultaneously for more than three seconds. The air conditioner will start to conduct a test run and "a i" will display on the temperature display.

However the   setting button does not have function but all other buttons, displays and protection functions will operate.

- To stop test running press the  button of the simple remote controller.
- For the operation method refer to the operating manual and perform operation check.
- Check that there are no abnormal sounds or vibration sounds during test run operation.

## 4. Touch panel controller

- (1) Select the objective you want to test run.  
Select the objective icon or list at the monitor screen. (Multiple selections is possible)  
Select all the devices registered as objectives by pressing "Select All" on the monitor screen.
- (2) After objective selection at (1), switch to the <Setting screen> by pressing "Operation".
- (3) Switch to the <Detail setting screen > by pressing "Optional setting" on the setting screen,
- (4) Press "Start" button and OK on the details setting screen.

Test run continues for 60 minutes.

To interrupt test run, select the device being the test run and excute an operation stop.

At the monitor screen, test run can cancel by selecting objective device and press OFF.

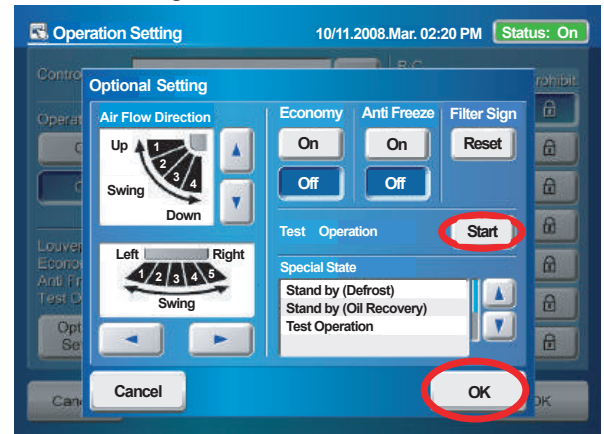

UTY - DTG \*

<Setting screen>

<Detail Setting screen>

## 5. Central remote controller

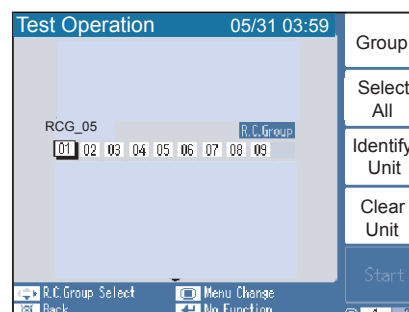

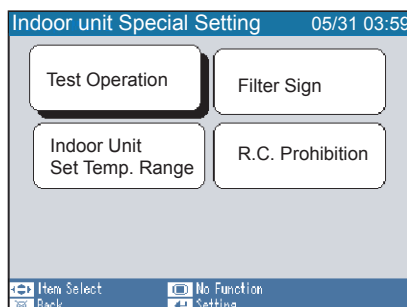

- (1) Press " " button.
- (2) Press "Set up Menu" and input password.
- (3) Select "Indoor unit special setting" by presing or button.
- (4) Select "Test operation by presing" or button
- (5) Press the "Select ALL button" or "Identify unit" button  
[ Select All ]: All of R.C.Group (Indoor units)  
[ Identify Unit ] : Specific R.C.Group (Indoor unit)

- (6) Press the " Start " button

The test run continues for 60 minutes.

To interrupt test run before it is complet, return to the "Monitor Mode Screen",  
and press ON/ OFF.

UTY-DCG \*

## 6. 2-wire type wired remote controller

- (1) Press "Menu" on the monitor screen. the < Main Menu screen > is displayed.
- (2) Press "Next Page" and press "Maintenance"
- (3) Press "Next Page" and press "Test Run". the <Test run screen > is displayed.
- (4) Press "OK"

The test run continues for 60 minutes.

To interrupt test run before it is complet, return to the "Monitor Mode Screen", and press ON/ OFF.

# 1-5 TEST RUN CONTROL

## 1. When the test run signal is transmitted from standard wired, wireless remote controller, simple remote controller, transmitted network, and outdoor unit.

- (1) The test run operation starts and the electric expansion valve is controlled to a maximum flow, regardless of the temperature condition.
- (2) Frost prevention operation has priority over item(1).
- (3) Whether state of the indoor unit operates or stops, All units in the same refrigerant circuit will start to conduct a test run in accordance with the operation mode set by push switch of outdoor unit ( see 1 - 2 - 3 ).
- (4) After 60 minutes passes, the test run stops.
- (5) Test running initialization is shown below.

\* The temperature controlling on the test run operates regardless of setting temperature.

| Operating Mode               | EXCEPT FOR THE DUCT MODEL |            | DUCT TYPE |         |
|------------------------------|---------------------------|------------|-----------|---------|

\*1 : If one of compressor fails, backup operation will be performed by the remaining compressors.( For starting the system SET4-2 switching is required)

\*2 : If one of compressor fails, all units will be abnormal stop.

\*3 : When electricity meter No. is set to "000" and "201 to 299", the pulses input to CN135 become ineffective.  
Available setting number is "001" to "200"

\*4 : When the electricity meter pulse setting is set to "0000", the pulses input to CN135 become ineffective.  
Available setting number is "0001" to "9999"

\*1: Auto restart is an emergency function such as for power failure etc.

Do not start and stop the indoor unit by this function in normal operation.

Be sure to operate by the control unit, converter or external input device.

\*2: Fan Setting when cooling thermostat OFF, Connection of the wired remote controller (2-wire type or 3-wire type) and switching its thermistor are necessary.

\*1: Auto restart is an emergency function such as for power failure etc.

Do not start and stop the indoor unit by this function in normal operation.

Be sure to operate by the control unit, converter or external input device.

\*2: Select control conditions of external output.

"Mode 00" is output when heating thermostat is ON, "Mode 01" is output in heating operation, "Mode 02" is output in heating operation and in fan operation.

## 2-3 COMPRESSOR OPERATION

### 2-3-1 Operation / Stop Condition

When cooling requirement capacity or heating requirement capacity from either of the indoor units in the same refrigerant circuit is input, the compressor operates.

When all the indoor units in no "cooling requirement capacity" or "heating requirement capacity", the compressor is stopped.

But in the following case, the compressor operates in accordance with operation of each mode.

- During 3 minute restart prevention operation
- Icing protection
- Failure (Refer to chapter 4, TROUBLE SHOOTING )
- Oil recovery
- Under expansion valve initialization
- At protective operation
- Emergency stop
- Defrost operation
- Peak cut stop operation

## 2-3-2 Compressor speed control

### (1) Speed range and controlling

- On operation range: 20 - 115 rps\*
- Changing interval: 60 sec.
- When the multi connection outdoor unit has the same type of compressor, all of compressors rotational speed are controlled with the same speed at the normal operating condition.
- All of the outdoor unit compressors must start at the start-up process.
- The Normal start process (Except the condition of Cold start)  
The first target speed is decided by indoor unit capacity demand.  
The upper limit speed at starting is made 60 rps and is raised in 30 rps to 90 rps after 60 seconds.  
(The upper speed limit depends on the operating high pressure value)

- The lower limit speed at start-up changes depending on the outdoor temperature

- Cold Start start process

Condition: Outdoor temperature below 21 °C and the system stopped for more than 1 hour]

Control HP\*: Change the rps so that high pressure does not reach to protection condition

## 2-3-3 Capacity Control

### (1) Capacity of compressor operation

The inverter compressor is able to control the amount of required refrigerant circulation in details.

By combining the operation of inverter compressors, the amount of required refrigerant circulation according to cooling and heating load can be supplied from compressor efficiently.

Ex) Combination of 65cc compressor / Heating (Heating main)

### (2) Target low-pressure and high-pressure control

#### <Cooling>

In order to make the evaporation pressure of the indoor unit at the proper pressure on a variety of operations, capacity of the compressor will be controlled by low-pressure sensor.

#### <Heating>

In order to make the condensation pressure of the indoor unit at the proper pressure on a variety of operations, capacity of the compressor will be controlled by high-pressure sensor.

## 2-3-4 Compressor Sequence Operation

Make starting sequence and start and stop of the compressors in accordance with the below sequence.

Starting sequence condition

Example)

Starting sequence ① : Compressor started first, compressor stopped last

Starting sequence ② : Compressor started 2nd, compressor stopped 2nd from the end

Starting sequence ③ : Compressor started 3rd, compressor stopped 3rd from the end

Rotate the stating sequence under the following conditions:

- (1) Defrosting
- (2) Oil recovery
- (3) When cooling discharge temperature is high
- (4) After stopping from Heating operation

## 2-4 FAN CONTROL

### 2-4-1 Cooling Operation

The outdoor fan speed at start up is 300 rpm

| Fan step | Fan speed (rpm)              |                              |                              |                              |                              |                              |

<< Ex. Cooling operation >>

The fan speed is controlled to keep high pressure saturation temperature within the target range as follows  
The high-pressure is monitoring at a set time interval and the fan speed is changed by the following conditions.

(Conditions which raise the fan speed)

High-pressure saturation > upper limit of target high-pressure saturation or heat sink temperature  $\geq 80^{\circ}\text{C}$

(Conditions which lower the fan speed)

High-pressure saturation < low limit of target high-pressure saturation range and heat sink temperature  $\leq 75^{\circ}\text{C}$

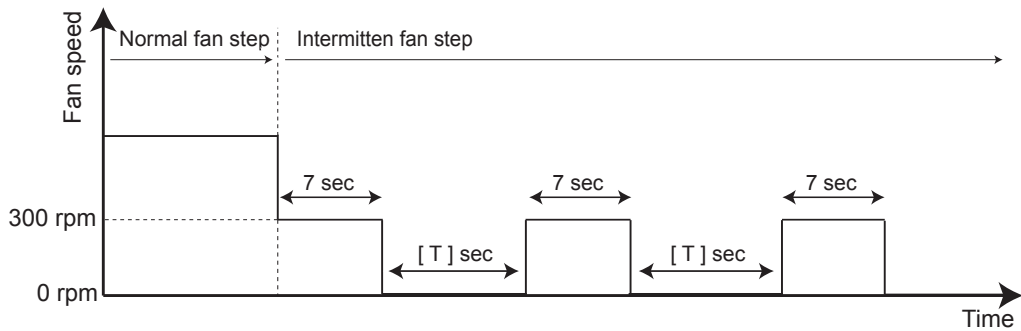

High-pressure saturation temp.

### Intermittent fan mode

When switched from normal fan step to intermittent fan step, always start from 300rpm/7sec.  
When there was a change during intermittent step 1-6, switching is performed at the time the current speed duration time reaches time-up.

| Fan step | Fan mode       | Fan speed 0 rpm<br>duration time T ( sec ) | Fan speed 300 rpm<br>duration time ( sec ) |
|----------|----------------|--|--|
| 6        | intermittent 6 | 40   | 7  |
| 5        | intermittent 5 | 33   |  |
| 4        | intermittent 4 | 26   |  |
| 3        | intermittent 3 | 19   |  |
| 2        | intermittent 2 | 12   |  |
| 1        | intermittent 1 | 6  |  |

## 2-4-2 Heating Operation

### (1) Heating Operation

The fan speed during all heating is constant with **Fan step 16\*** regardless of the outdoor air temperature.

| Fan step | Fan speed (rpm) |               |               |
|----------|-----------------|---------------|---------------|
|          | AJ* 072/ 090L   | AJ* 108/ 126L | AJ* 144/ 162L |
| 16*      | 880             | 920           | 970           |
| 15       | 860             | 870           | 870           |
| 14       | 810             | 820           | 820           |
| 13       | 720             | 720           | 720           |
| 12       | 620             | 620           | 620           |
| 11       | 500             | 500           | 500           |

## 2-5 EXPANSION VALVE CONTROL

The EEV controls the flow of refrigerant

|       | Operation mode | Contrl and detection  | Control range   |         |
|-------|----------------|---|-----------------|---------|
|       |                |   | operation range | stop    |
| EEV 1 | Cooling        | _____   | 480 pulses      | 0 pulse |
| EEV 2 | Heating        | - SH control (TH7,TH8 - LPS )<br>"Target SH: 4 °C "<br>- Protection (TH1) (LPS) | 11 - 480 pulses | 0 pulse |
| EEV 3 | Cooling        | - SH control (TH6, - LPS )<br>"Target SH: 4 °C "<br>- Protection (TH1)          | 0- 500 pulses   | 0 pulse |
|       | Heating        |   |                 |         |

Initialization conditions: - When power turned On. - When operation stopped.

## 2-6 SPECIAL OPERATION

### 2-6-1 Oil Recovery Operation

#### (1) Purpose of the operation

The amount of refrigerant lubricant oil which has been transported to the indoor units and the connection pipe with the refrigerant will become large as the operation time of compressor increases. It is necessary to recover the oil back into the outdoor unit for a certain time interval in order to prevent compressors from damaging due to lack of lubrication oil.

#### ① Cooling oil recovery operation

##### < Start condition >

Compressor accumulated operation time since last cooling oil recovery operation exceeds 3 hours  
(first time : 1hour)

##### < End condition >

30 seconds have elapsed since the start and "suction temperature - low pressure saturation temperature  $\leq 5\text{deg}$ " at all outdoor units or 6 minutes have elapsed since the start.

##### < Operation >

COMPRESSOR: Performed by all INV compressors operating up until now

INV speed varies depending on the operation state.

EEV Opening (Indoor/Outdoor unit): Controlled pulse (as normal operation mode).

FAN speed (Indoor/Outdoor unit) : Controlled fan speed (as normal operation mode).

#### ② Heating oil recovery operation

##### < Start condition >

Compressor accumulated operation time since the last heating oil recovery exceeds 8 hours  
(first time : 1hour)

##### < End condition >

After 4 minutes have elapsed

##### < Operation >

COMPRESSOR: Performed by all INV compressors operating up until now

INV speed varies depending on the operation state.

EEV Opening (Indoor/Outdoor unit) : Controlled pulse (as normal operation mode)

FAN speed (Indoor/Outdoor unit) : Controlled fan speed (as normal operation mode)

#### Others

During the oil recovery operation,  appears on the display of wired and central remote controller, and  appears on the simple remote controller.

The operation indicators (LED) of the indoor units flash slowly.

### 2-6-2 Pre-heat Operation

This pre-heat operation protects the start up failure by preventing the refrigerant from soaking into the oil in compressor.

2 pcs of belt heater installed on the compressor

The crankcase heaters are controlled by the outdoor temperature

##### < Control condition >

Crankcase heater ON: 30 minutes elapsed since installed compressors stopped  
(However, ON when power turned on)

OFF: Installed compressors operation

## 2-6-3 Defrost Operation Control

### < Defrosting start condition >

Accumulated heating operation time is 40 minutes or longer

(Accumulated heating operation time is reset at the end of cooling operation or defrosting operation.)

And

One of Heat-Ex satisfies condition ① or ② or ③ below

Condition ① : Accumulated operating time is 150 minutes\* or longer:

"Heat exchange liquid temperature (TH9 and TH10)  $\leq$  -2°C"

\*75 minutes: when indoor unit connection capacity  $\leq$  90% at 1 outdoor unit connection.

Condition ② : Accumulated time 10 minutes:

"Heat exchange liquid temperature (TH9 and TH10)  $\leq$  Defrosting Start Judgment Temperature\*

And

"During heat exchange liquid temperature keeps dropping "

\*Defrosting Start Judgment Temperature(°C) = 0.8 x Outdoor temperature (°C) - 11.6

-However, -27.6°C to -6°C

If the calculated result is lower than -27.6°C, the judgment temperature is defined as -27.6°C

If the calculated result is higher than -6°C, the judgment temperature is defined as -6°C

(Defrosting start judgment temperature are determined by the outdoor temperature.)

Condition ③ : Less than 10 minutes operation at outdoor temperature below 2°C occurred 20 times.

### < Defrosting end condition >

① At all outdoor units, heat exchange liquid temperature  $\geq$  Defrosting End Judgment Temp.\* and 180sec elapsed,  
and all of outdoor unit's Suction temperature - Low pressure saturation temperature  $\leq$  5°C

or

② When 15 minutes have elapsed from the start

\*Defrosting End Judgment Temperature(°C) = 0.39 x outdoor temperature(°C) + 12.7

-However, 5°C to 12°C range

If the calculated result is lower than 5°C, the judgment temperature is defined as 5°C.

If the calculated result is higher than 12°C, the judgment temperature is defined as 12°C

# < Operating state of each part during defrosting operation >

| Actuator     | Preparation process           | On Defrost operation           | Finishing process             |
|--------------|-------------------------------|--------------------------------|-------------------------------|
| Compressor   | All compressor operaiotn Stop | All compressor start           | All compressor operaiotn Stop |
| Heat Ex(4WV) | Change Condensor (OFF)        | Condensor (OFF)                | Keeps the operation mode      |
| FAN          | Stops                         | Stops                          | Stops                         |
| EEV1<br>EEV2 | 0 pls                         | EEV1: 300 pls<br>EEV2: 480 pls | 0 pls                         |
| EEV3         | 0 pls                         | 100 - 500 pls                  | 0 pls                         |
| SV1,SV2      | Open (Balancing)              | Close                          | Open                          |

## [ STEP 1 ]

All compressors operates and it defrosting.

## [ STEP 2 ]

Outdoor units which satisfied the defrosting end judgment temperature are operated at the lowest speed (20rps) for inverter compressor.

## [ STEP 3 ]

When the defrosting of all outdoor units ends, all outdoor unit stop.  
The start rotation execution is done, and restarts.

## 2-6-4 Low noise mode

When the low noise mode setting ON from Push SW or External input or System controller Input, the outdoor unit operates in the low noise mode as follows.

### « Setting and corresponding operations »

| External Input (CN131) on Master O.U. or Low noise mode setting (Push SW) | Capacity priority setting (Push SW) | Low noise level setting (Push SW) | Operation mode          |
|---|-------------------------------------|-----------------------------------|-------------------------|
| ON  | OFF                                 | LEVEL 1                           | LOW NOISE MODE ①        |
|   |                                     | LEVEL 2                           | LOW NOISE MODE ②        |
|   | ON                                  | LEVEL 1                           | * Automatic switching ① |
|   |                                     | LEVEL 2                           | * Automatic switching ② |

### « Low noise mode and operation contents »

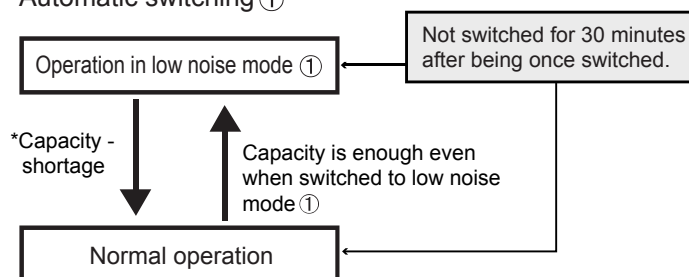

|                  |      |                                 | AJ* 072L | AJ* 090L | AJ* 108L | AJ* 126L | AJ* 144L | AJ* 162L |
|------------------|------|---------------------------------|----------|----------|----------|----------|----------|----------|
| LOW NOISE MODE ① | COOL | Fan upper limit speed           | 620rpm   | 620rpm   | 620rpm   | 620rpm   | 620rpm   | 620rpm   |

|                  |      | Upper limit compressor capacity | 50rps    | 52rps    | 53rps    | 53rps    | 53rps    | 53rps    |

The operating noise is reduced by limiting the rotational speed of compressor and fan motor

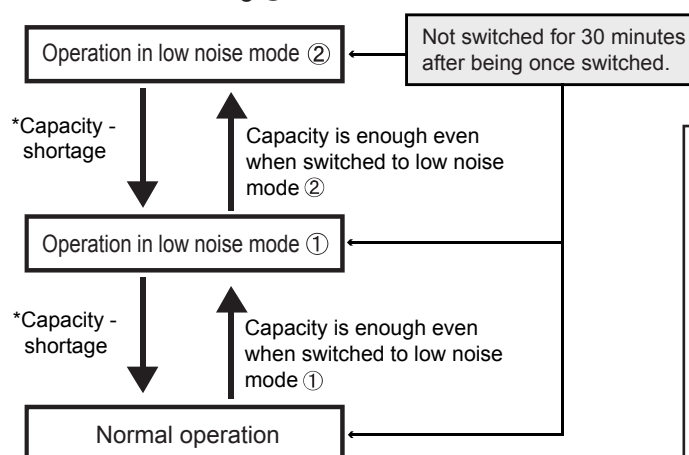

LOW NOISE MODE ① . . . The operating sound lowers from about 3 to 5 dB more than the rated value

LOW NOISE MODE ② . . . The operating sound lowers from about 3 to 5 dB more than the LOW NOISE MODE ①

#### \* Automatic switching ①

#### \* Automatic switching ②

#### \* Capacity shortage condition

- When the compressor capacity is not enough  
(Compressor operates with upper limit capacity for long time.)
- When condensing capacity is not enough in cooling operation  
(When the following condition keeps for 5 minutes,  
All of HEX in use and FAN speed can not increase and High pressure saturation temperature  $\geq 58^{\circ}\text{C}$  (3.57MPa))
- When evaporating capacity is not enough in heating operation  
(When the following condition keeps for 5 minutes,  
All of HEX in use and FAN speed can not increase and low pressure saturation temperature  $\leq 0^{\circ}\text{C}$ )

## 2-6-5 Snow Falling Protection Fan Mode -Default Setting -

The fan rotates compulsorily at the maximum speed when the outdoor temperature becomes 5 °C or less.  
The fan is rotated for 1 minute at the fan step upper limit at the interval set by PUSH SW.  
This mode ends when the outdoor temperature becomes 7 °C or more or operation starts.

When the Snow Falling protection is not necessary, change the Function setting F2 -22 "Invalid"

(Operation contents)

| Interval setting     | PUSH SW setting<br>( F2 - 23 ) | Interval time Int (min) |
|----------------------|--------------------------------|-------------------------|
| setting ④ (standard) | 00                             | 30                      |

## Discharge temperature protection -Summary-

### Protection controlling range in Cooling mode

Note: In cooling mode, there are 4 kind of discharge temp. protections are existing and,  
The protection operation by EEV exists only on the Outdoor unit.  
Target pressure controlling will be cancelled when the temperature is in the range color orange.

### Protection controlling range in Heating mode

Note: In heating mode, there are 5 kind of discharge temp. protections are existing.  
and protection operation by EEV exists IU and O.U  
Target pressure controlling will be cancelled when the temperature is in the range of orange.

## 2-7-2 High pressure protection

| Protective function                       | Detect device               | Cool | Heat | Display | Start condition  | Release condition  | Operation  |

| Outdoot unit EEV coil 1,2,3 abnormal Stop | Outdoor unit Controller PCB EEV drive Circuit | ○    | ○    | Error on OU.<br>7-Seg display<br><br>E9A"X"<br>Coil No, "X"      |   |  | System Stop<br>Error indication<br>"CoiX1 Error"<br>Coil No, "X" |

### 3. INDOOR UNIT OPERATION

# 3. INDOOR UNIT OPERATION

## 3-1 FAN CONTROL

### 3-1-1 Fan Speed Setting

Fan speed setting

Press the FAN CONTROL button to set the fan speed.

### 3-1-2 "AUTO" Position

#### 1. COOLING OPERATION

The fan speed is determined automatically in accordance with the condition " $T_R$ (corrected room temperature) -  $T_s$  (corrected set temperature)" as shown on the right. However, the fan speed zone is determined in the manner as the room temperature increases for the following cases.

- (1) When the  $T_s$  is changed.
- (2) When the operation mode is changed from other mode to "COOL".
- (3) When the fan control is changed from other position to "AUTO".

#### 2. HEAT OPERATION

Same as Cooling operation, fan speed is decided by the difference between the room temperature and the set temperature.

#### 3. DRY OPERATION

The indoor fan always rotates at "Lo" speed.

- (1) The indoor fan starts operation 5 seconds after the electric expansion valve opens. However, when the indoor unit just starts its operation or the operation mode is changed from other to "DRY" and the refrigerant circulation is not stopped, the fan will rotate immediately without a delay time of 5 seconds.
- (2) The indoor fan will stop in 30 seconds when the refrigerant circulation stops.
- (3) The indoor fan will stop immediately when the indoor unit is stopped by pushing the stop button or by a setting of ON timer.
- (4) When the refrigerant circulation is stopped due to a lower room temperature for more than 3 minutes, the fan will rotate 2 minutes at intervals of 3 minutes.
- (5) When the indoor unit just starts its operation or the operation mode is changed from other to "DRY" and the refrigerant circulation is stopped, the fan will rotate for 1 minute and then it will operate according to the statement (4).

## 3-2 MASTER CONTROL

### 3-2-1 Operation Mode Control

Each operation mode is controlled as below.

(1) Stop mode

|                          |   |
|--------------------------|---|
| Indoor fan motor         | : OFF   |
| Electric expansion valve | : Stop pulse                                      |
| Drain pump               | : Turns ON-OFF by the drain pump control function |

(2) Cool, Dry and Heat Mode

|                            | Cool   | Dry   | Heat   |
|----------------------------|--|---|--|
| Indoor fan motor           | Operates according to the AIR FLOW-MODE setting.                                     | See the fan control page.   | Operates according to the AIR FLOW-MODE setting, and besides cold air prevention operation |
| Drain pump                 | Turns ON-OFF by the drain pump control function                                      |   |  |
| Electrical expansion valve | Pulse controlled by the temperature difference calculation and frost prevent fuction | Pulse controlled by the temperature difference calculation and frost prevent function | Pulse controlled by the temperature difference.  |

(3) Priority mode

The purpose of the priority mode is to restrict operation commands (heating, cooling, dry) from the connected indoor units. There are 3 priority modes of Neutral, Cooling Priority, and Heating Priority. The operation modes restricted by each of these modes are as follows:

| Priority mode    | Restricted operation mode |
|------------------|---------------------------|
| Neutral          | No restrictions           |
| Cooling priority | Heating                   |
| Heating priority | Cooling, dry              |

1. Priority mode decision methods

Method 1. (Default value)

The initial priority mode is made Neutral and is shifted to Cooling Priority when cooling and to Heating Priority when heating depending on which operation mode (cooling, heating) was input first. After shifting to Cooling Priority or Heating Priority, the priority mode shifts to Neutral only when there was a Stop input from all the indoor units.

Method 2. (Management by outdoor unit)

Operation mode management is made "Management by outdoor unit" by outdoor unit PUSH-SW (field setting).

The priority mode shifts to Cooling Priority or Heating Priority in accordance with input from the outdoor unit regardless of the current mode.

### Method 3. (Management by indoor unit)

Operation mode management is made "Management by indoor unit" by outdoor unit PUSH-SW (field setting).

Then the master indoor unit is set by wired remote controller.

Thereupon the priority mode shifts to Cooling Priority or Heating Priority in accordance with input from the master indoor unit regardless of the current priority mode.

The priority mode is fixed at either cooling or heating even if the master indoor unit stops

Cooling/heating switching can be performed by the master indoor unit only.

### (4) Opposite operation mode

When the operation mode commanded from an indoor unit (remote controller) and the operation mode allowed by the system (cooling and dry operation for cooling only type and operation mode allowed by priority mode for heat pump type) do not match, it is indicated by blinking of an LED.

Timer lamp: 3 secs ON/1 sec OFF repeated

### 3-2-2 Operation Mode Control for Outdoor air unit

Each operation mode is controlled as below.

#### (1) Stop mode

Outdoor air unit fan motor : OFF  
Electric expansion valve : Stop pulse  
Drain pump : Turns ON-OFF by the drain pump control function  
Solenoid valve : Closed

#### (2) Cool and Heat Mode

Each operation mode is controlled as below.

|                            | Cool   | Heat  | Fan  |
|----------------------------|--|---|--|
| Outdoor air unit fan motor | Operates according to the HIGH MODE setting.   | Operates according to the HIGH MODE setting.                              | Operates according to the HIGH MODE setting. |
| Drain pump                 | Turns ON-OFF by the drain pump control function  |   |  |
| Electrical expansion valve | Pulse controlled by the temperature difference calculation and freeze prevention control | Pulse controlled by the temperature difference.                           | Stop pulse                                   |
| Solenoid valve             | Closed at all times  | Opened at thermostat off and compressor on.<br>Closed at other operation. | Closed at all times                          |

### (3) Priority mode

The purpose of the priority mode is to restrict operation commands (heating, cooling) from the connected outdoor air units. There are 3 priority modes of Neutral, Cooling Priority, and Heating Priority. The operation modes restricted by each of these modes are as follows:

| Priority mode    | Restricted operation mode |
|------------------|---------------------------|
| Neutral          | No restrictions           |
| Cooling priority | Heating                   |
| Heating priority | Cooling                   |

#### 1. Priority mode decision methods

##### Method 1. (Default value)

The initial priority mode is made Neutral and is shifted to Cooling Priority when cooling and to Heating Priority when heating depending on which operation mode (cooling, heating) was input first. After shifting to Cooling Priority or Heating Priority, the priority mode shifts to Neutral only when there was a Stop input from all the indoor units.

##### Method 2. (Management by Outdoor unit)

Operation mode management is made "Management by Outdoor unit" by Outdoor unit PUSH-SW (field setting).

The priority mode shifts to Cooling Priority or Heating Priority in accordance with input from the Outdoor unit regardless of the current mode.

##### Method 3. (Management by indoor unit)

Operation mode management is made "Management by indoor unit" by Outdoor unit PUSH-SW (field setting).

Then the master indoor unit is set by wired remote controller.

Thereupon the priority mode shifts to Cooling Priority or Heating Priority in accordance with input from the master indoor unit regardless of the current priority mode.

The priority mode is fixed at either cooling or heating even if the master indoor unit stops Cooling/Heating switching can be performed by the master indoor unit only.

### (4) Opposite operation mode

When the operation mode commanded from an indoor unit (remote controller) and the operation mode allowed by the system (cooling and dry operation for cooling only type and operation mode allowed by priority mode for heat pump type) do not match, it is indicated by blinking of an LED.

Timer lamp: 3 secs ON/1 sec OFF repeated

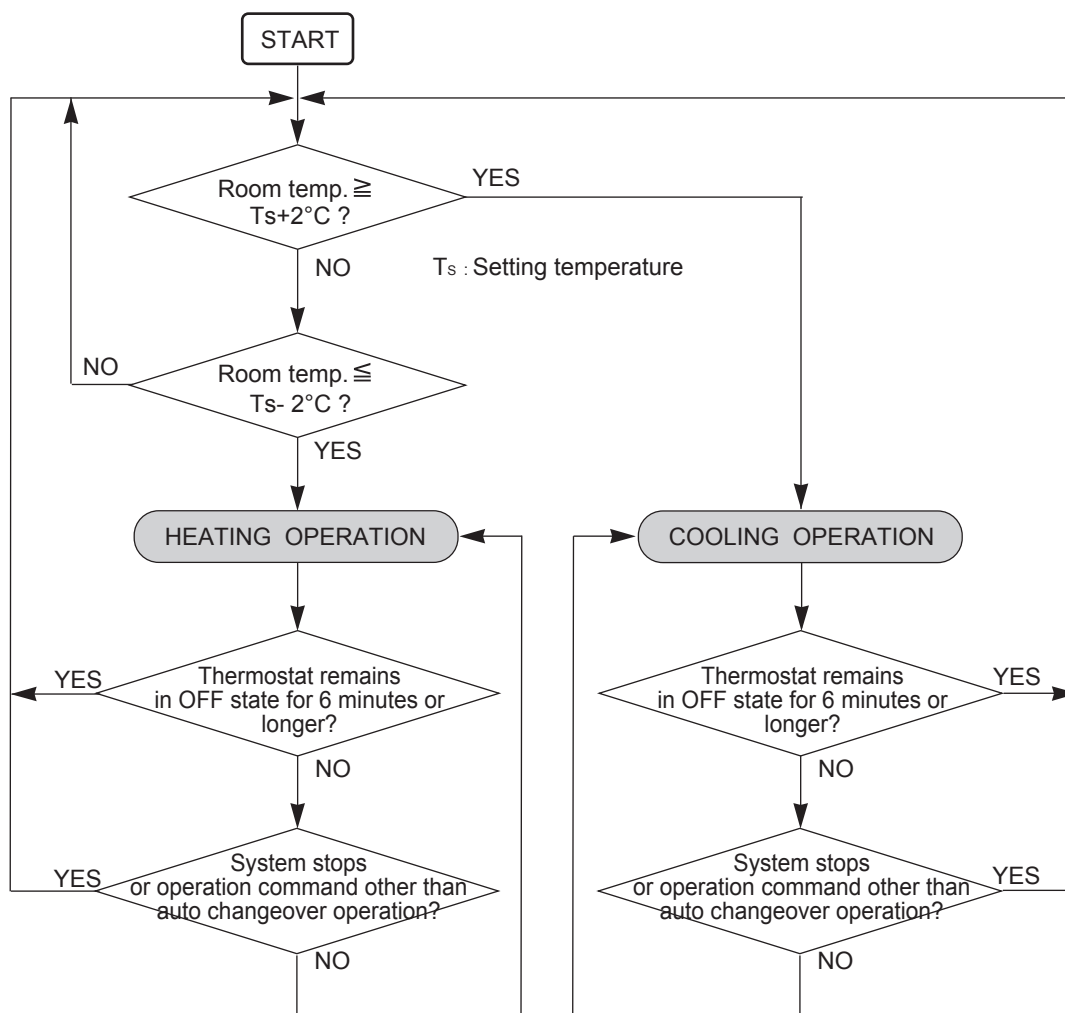

### 3-2-3 Auto Changeover

[Method]

1. Switch operation mode management to "Management by indoor unit" by outdoor unit DIP-SW.
2. Set the master indoor unit by wired remote controller.
3. Judge cooling/ heating by the difference between the master indoor unit's setting temperature and the room temperature.

#### ■ AUTO CHANGEOVER operation

Operation flow chart

### 3-2-4 Auto Changeover Heating / Cooling Operation for Outdoor air unit

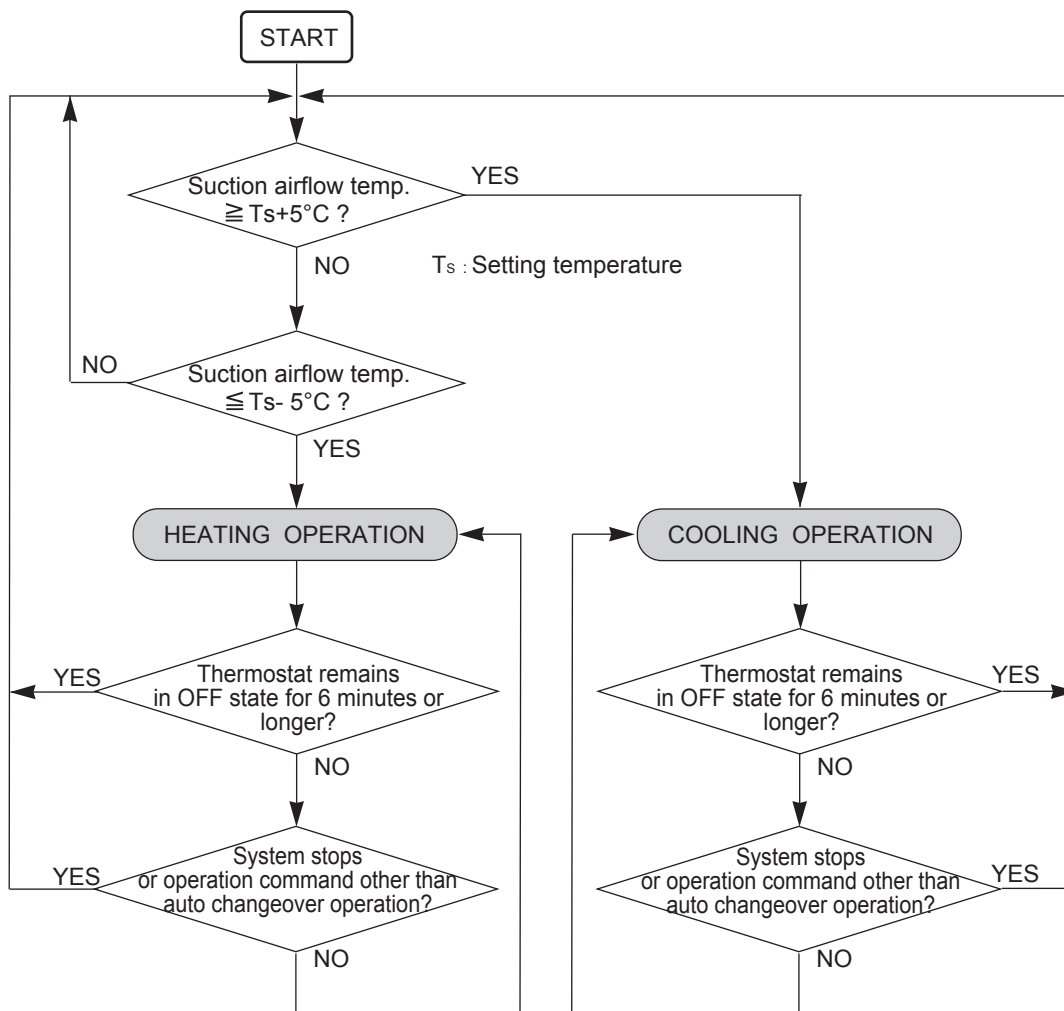

Function is available when an outdoor air unit set as the administrative indoor unit  
(Management Outdoor air unit).  
Refer to the setting Method

#### Setting Method

1. Switch operation mode management to "Management by outdoor air unit" by Outdoor unit PUSH-SW.
2. Set the master outdoor air unit by wired remote controller.
3. Judge cooling/heating by the difference between the master outdoor air unit's setting temperature and the suction airflow temperature

#### ■ AUTO CHANGEOVER operation

Operation flow chart

### 3-2-5 "COOL" Position

When using the cooling mode, set the temperature to a value lower than the current room temperature, otherwise the indoor unit will not start the cooling operation and only the fan will rotate.

An example for COOLING TEMPERATURE CONTROL time chart (Manual setting)

### 3-2-6 "HEAT" Position

- (1) When using the heating mode, set the temperature to a value higher than the current room temperature, otherwise the indoor unit will not start the heating operation.
- (2) After the start of heating operation, the fan of indoor unit will not rotate until the heater exchange is warmed up to blow out warm air.
- (3) During defrosting, the OPERATION indicator lamp flashes 6 sec. ON and 2 sec. OFF, and repeat. The heating operation will be temporarily interrupted.

An example for HEATING TEMPERATURE CONTROL time chart (Manual setting)

### 3-2-7 "COOL" Position for Outdoor air unit

When using the cooling mode, set the temperature to a value lower than the discharge airflow temperature, otherwise the outdoor air unit will not start the cooling operation and only the fan will rotate.

An example for COOLING TEMPERATURE CONTROL time chart (Manual setting)

### 3-2-8 "HEAT" Position for Outdoor air unit

- (1) When using the heating mode, set the temperature to a value higher than the discharge airflow temperature, otherwise the outdoor air unit will not start the heating operation.
- (2) During defrosting, the OPERATION indicator lamp flashes 6 sec. ON and 2 sec. OFF, and repeat. The heating operation will be temporarily interrupted.

An example for HEATING TEMPERATURE CONTROL time chart (Manual setting)

## 3-3 LOUVER CONTROL

### (1) ADJUSTING THE DIRECTION OF AIR CIRCULATION

Instructions relating to heating (\*) are applicable only to heat pump type outdoor unit.

Begin air conditioner operation before performing this procedure.

#### Vertical Air Direction Adjustment

This instructions are applicable to "LARGE CEILING TYPE", "UNIVERSAL FLOOR/CEILING TYPE", "CASSETTE TYPE", "WALL MOUNTED TYPE" and "COMPACT WALL MOUNTED TYPE".

**Example :** When set to vertical air direction.

**Press the VERTICAL AIR FLOW DIRECTION SET button.**

- Press the VERTICAL AIRFLOW DIRECTION button.  
The temperature display will change to the vertical airflow direction setting display.
- Press the VERTICAL AIRFLOW DIRECTION button to change the vertical louvre position.  
The position number will appear on the display.

Cooling & Dry : ①, ②, ③, ④

Heating : ①, ②, ③, ④

#### ■ LARGE CEILING TYPE

#### ■ UNIVERSAL FLOOR/CEILING TYPE

#### ■ CASSETTE TYPE

#### ■ COMPACT WALL MOUNTED TYPE

#### ■ WALL MOUNTED TYPE

Adjustable Position (All Mode) ①, ②, ③, ④, ⑤  
Position ② setting is available by only wireless remote controller

- Use the air direction adjustments within the ranges shown above.
- The vertical airflow direction is set automatically as shown, in accordance with the type of operation selected.  
During Cooling mode : Horizontal flow ①  
During Heating mode : Downward flow ④ (Large Wall mounted type: ⑤ )
- During AUTO mode operation, for the first minute after beginning operation, airflow will be horizontal ①, the air direction cannot be adjusted during this period.

## Horizontal Air Direction Adjustment

This instructions are applicable to "LARGE CEILING TYPE", "UNIVERSAL FLOOR/CEILING TYPE" and "WALL MOUNTED TYPE".

**Press the HORIZONTAL AIR FLOW DIRECTION SET button.**

- Press the HORIZONTAL AIRFLOW DIRECTION button. The temperature display will change to the horizontal airflow direction setting display.
- Press the HORIZONTAL AIRFLOW DIRECTION button to change the horizontal louvre position. The position number will appear on the display.

Cooling & Dry : ① , ② , ③ , ④ , ⑤

Heating : ① , ② , ③ , ④ , ⑤

**Example :** When set to horizontal air direction.

### ■ LARGE CEILING TYPE

### ■ WALL MOUNTED TYPE

### ■ UNIVERSAL FLOOR/CEILING TYPE

## (2) SWING OPERATION

Instructions are applicable to "LARGE CEILING TYPE", "UNIVERSAL FLOOR / CEILING TYPE", "CASSETTE TYPE", "WALL MOUNTED TYPE" and "COMPACT WALL MOUNTED TYPE".

Begin air conditioner operation before performing this procedure.

### To select Vertical airflow SWING Operation

This instructions are applicable to "LARGE CEILING TYPE", "UNIVERSAL FLOOR/CEILING TYPE", "CASSETTE TYPE", "WALL MOUNTED TYPE" and "COMPACT WALL MOUNTED TYPE".

**Press the VERTICAL SWING button for more than two seconds.**

The remote controller's Vertical Swing Display will light up.  
In this mode, the UP/DOWN air direction flaps will swing automatically to direct the air flow both up and down.

**Example :** When set to vertical swing.

### To Stop Vertical airflow SWING Operation

**Press the VERTICAL SWING button for more than two seconds once and again.**

The remote controller's Vertical Swing Display will go out.  
Airflow direction will return to the setting before swing was begun.

Instructions are applicable to "LARGE CEILING TYPE",  
 "UNIVERSAL FLOOR / CEILING TYPE", "CASSETTE TYPE",  
 "WALL MOUNTED TYPE", and "COMPACT WALL MOUNTED TYPE".

### About Vertical Airflow SWING Operation

- The SWING operation may stop temporarily when the air conditioner's fan is not operating, or when operating at very low speeds.
- The swing operation is not available depending on the model. Please refer to the operating manual for the indoor unit.

Air swing range

| Air flow direction set | Range of swing  |
|------------------------|---|
| ①                      | ① to ④<br>(All range)<br><br>*Large Wall Mounted type<br>① to ⑤ |
| ②                      |   |
| ③                      |   |
| ④                      |   |

### To select Horizontal Airflow SWING Operation

This instructions are applicable to "LARGE CEILING TYPE",  
 "UNIVERSAL FLOOR / CEILING TYPE", "WALL MOUNTED TYPE"  
 and "CEILING WALL TYPE".

**Press the HORIZONTAL SWING button for more than two seconds.**

The remote controller's Horizontal Swing Display will light up.  
 In this mode, the RIGHT/LEFT air direction louvers will swing  
 automatically to direct the airflow both right and left.

**Example :** When set to horizontal swing.

### To stop Horizontal airflow SWING Operation

**Press the HORIZONTAL SWING button for more than two seconds  
 once and again.**

The remote controller's Horizontal Swing Display will go out.  
 Airflow direction will return to the setting before swing was begun.

### About Horizontal Airflow Swing Operation

- Left and right swing range can be changed in 3 steps by field setting.
- The SWING operation may stop temporarily when the air conditioner's fan is not operating, or when operating at very low speeds.
- The swing operation is not available depending on the model. Please refer to the operating manual for the indoor unit.

Left and right swing range (◆ ... Factory setting)

| Range of swing       | Function Number | Setting Value |
|----------------------|-----------------|---------------|
| ◆ ① to ⑤ (All range) | 24              | 00            |
| ① to ③               |                 | 01            |
| ③ to ⑤               |                 | 02            |

## 3-4-1 ELECTRONIC EXPANSION VALVE CONTROL

### 1. Initialization

- When the power is turned ON.
- When it has passed the limited time since the last initialization.

### 2. Operation Control

- When indoor unit stopping

| Outdoor unit Condition | EEV Condition |
|------------------------|---------------|
| OFF                    | Fully closed  |
| Cooling                | Fully closed  |
| Heating                | Slightly open |

- When starting up  
(Cooling) Move to the cooling control base pulse in steps.  
(Heating) Move to the heating control base pulse in steps.
- Automatic operatic control  
Automatic PI control is performed based on the indoor unit heat exchanger outlet temp and inlet temp.
- Room temperature control  
The room temperature is controlled so that it reaches to the set-up temperature based on the difference between the room temperature and the set-up temperature, and the change of indoor unit temperature. if the room temperature becomes 0.5°C lower than the set-up temperature, EEV is fully closed.

### 3. Special Control

- Oil recovery operation : Controlled pulse.
- Test run operation : Controlled pulse.
- Icing protection control : Fully closed.
- Pump down operation : Fully open.
- Defrost operation : Controlled pulse

## 3-4-2 ELECTRONIC EXPANSION VALVE CONTROL for Outdoor air unit

### 1. Initialization

- When the power is turned ON.
- When it has passed the limited time since the last initialization.

### 2. Operation Control

- When indoor unit stopping by Thermo-OFF condition.

| Outdoor unit Condition | EEV Condition |
|------------------------|---------------|
| OFF                    | Fully closed  |
| Cooling                | Fully closed  |
| Heating                | Fully closed  |

- When starting up  
(Cooling) Move to the cooling control base pulse in steps.  
(Heating) Move to the heating control base pulse in steps.
- Automatic operatic control  
Automatic PI control is performed based on the indoor unit heat exchanger outlet temp and inlet temp.
- Discharge airflow temperature control  
The discharge airflow temperature is controlled so that it reaches to the set-up temperature based on the difference between the discharge airflow temperature and the set-up temperature.  
Cooling operation: 1) If the discharge airflow temperature becomes 5°C lower than the set-up temperature, EEV is fully closed.  
2) If the suction airflow temperature becomes 0.5°C lower than the set-up temperature, EEV is fully closed.  
Heating operation: 1) If the discharge airflow temperature becomes 5°C higher than the set-up temperature for 5 minutes or more, EEV is fully closed.  
2) If the suction airflow temperature becomes 0.5°C higher than the set-up temperature, EEV is fully closed.

### 3. Special Control

- Oil recovery operation : Controlled pulse(Maximum 1400 puls)
- Test run operation : Controlled pulse.
- Freeze prevention control : Fully closed.
- Vacuuming operation : Fully open.
- Defrost operation : Controlled pulse(Maximum 1400 puls)

### 3-5-1 DRAIN PUMP OPERATION

- (1) When cooling and refrigerant circulation starts, the drain pump starts simultaneously.
- (2) The drain pump operates continuously for 3 minutes after the refrigerant circulation stopped.
- (3) When the refrigerant circulation is stopped by a start of indoor heat exchanger frost prevention operation, the drain pump will turn off in 1 hour after the end of indoor heat exchanger frost prevention operation.
- (4) When the water level in the drain pan rises up and then the float switch functions:
  - ① Microcomputer stops the refrigerant circulation and indoor fan motor operation.
  - ② Drain pump operates continuously for 3 minutes after the float switch is turned off.  
(Almost condensing water may be drained)
- (5) When the float switch turns ON continuously for 3 minutes, 'FAILURE INDICATION' operates.
- (6) When the float switch turns OFF within 3 minutes, the unit starts cooling operation.

### 3-5-2 DRAIN PUMP OPERATION for Outdoor air unit

- (1) When cooling and refrigerant circulation starts, the drain pump starts simultaneously.
- (2) The drain pump operates continuously for 3 minutes after the refrigerant circulation stopped.
- (3) When the refrigerant circulation is stopped by a start of indoor heat exchanger frost prevention operation, the drain pump will turn off in 1 hour after the end of indoor heat exchanger frost prevention operation.
- (4) When the water level in the drain pan rises up and then the float switch functions:
  - ① Microcomputer stops the refrigerant circulation and indoor fan motor operation.
  - ② Drain pump operates continuously for 3 minutes after the float switch is turned off.  
(Almost condensing water may be drained)
- (5) When the float switch turns ON continuously for 3 minutes, 'FAILURE INDICATION' operates.
- (6) When the float switch turns OFF within 3 minutes, the unit starts cooling operation.

## 3-6 FUNCTION

### 3-6-1 Auto Restart

The air conditioner restarts with the previous setting operation.

### 3-6-2 Icing Protection Control

The icing of the indoor heat exchanger is prevented during the cooling and dry mode operation.

(1) Starting Condition

- Compressor is operation more than 3 minutes.  
When "Heat exchanger inlet temperature  $\leq T_A$ " continues \*4 minutes or more.
- Compressor is operation more than 3 minutes.  
When "Heat exchanger outlet temperature  $\leq T_A$ " continues 4 minutes or more.

(2) Operation

EEV is closed.  
Fan is at the setting amount.

(3) Completing Condition

Heat exchanger inlet and middle temperature  $\geq T_B$   
After more than 5 minutes

\* Drain pump turns off at 60 minutes past the completion of the icing protection operation.

| $T_A$ | $T_B$ |
|-------|-------|
| 1°C   | 7°C   |

### 3-6-3 Oil Recovery Operation

[Oil recovery operation] : It periodically returns the residual refrigerant ion oil in the indoor unit and the connection piping back to the outdoor unit , and prevents the compressor oil level from decreasing.

Indoor unit LED : Operation LED

Indoor fan : Same operation before oil recovery operation.

Indoor EEV : Control pulse

\* During the above operation, a refrigerant noise may be from the indoor unit.

### 3-6-4 Outdoor temperature protected operation for Outdoor air unit

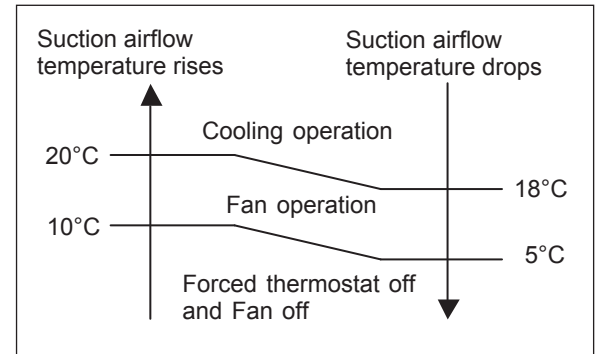

#### 1. COOL OPERATION

The contents of operation is controlled as following based on the suction airflow temperature.

- a) Operation mode management is made  
"Management by indoor unit", and  
outdoor air unit is master indoor unit.

- b) Cases Other than (a)

#### 2. HEAT OPERATION

The contents of operation is controlled as following based on the suction airflow temperature.

#### 3. FAN OPERATION

The contents of operation is controlled as following based on the suction airflow temperature.

- a) Operation mode management is made  
"Management by indoor unit", and  
outdoor air unit is master indoor unit.

- b) Cases Other than (a)

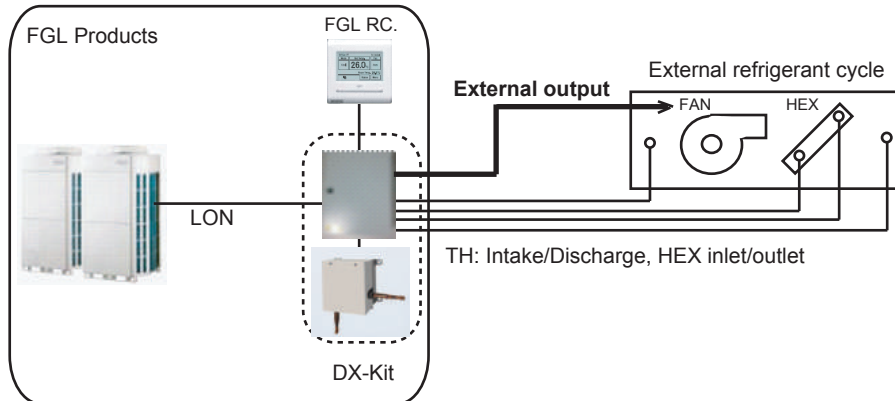

## 3-7 DX-KIT

### 3-7-1 SYSTEM CONFIGURATION

#### 1. FGL remote/controller connection

The DX kit is controlled by a VRF operation device and use the external output of the DX kit to perform the AHU operation indirectly.  
Control devices can be unified with FGL devices.

| Interface       | Contents                                |
|-----------------|---|
| External input  | Fan ON/OFF                              |
| External output | Thermostat ON/OFF<br>FAN abnormal input |

#### 2. External controller connection

Air conditioning control (thermostat-control) can be designed on-site.  
(Air conditioning control by DX is also possible.)  
Control equipment suited to the application can be connected.

| Interface       | Contents   | Remarks   |
|-----------------|--|---|
| External input  | Operation ON / OFF                                 |   |
|                 | Operation mode Cool / Heat                         | Typical indoor unit is required for mode changing.  |
|                 | Set temperature or capacity request (Analog input) | Temperature setting :<br>When thermo-control is performed by DX kit.<br>Capacityrequest :<br>When the thermo-control is performed by external controller. |
|                 | Error  | Information on error occurred at external controller  |
| External output | Operation ON/OFF                                   |   |
|                 | Error  | Information on error occurred at VRF system   |
|                 | Special operation (defrost)                        | The Fan operation can be stopped with the communication signal of special operation   |

## 3-7-2 FUNDAMENTAL FUNCTIONS

### 1. FGL remote/controller connection

|  |  |  |
|--|--|--|
| Air conditioning control system (SET3-3) | Intake temperature control   | Discharge temperature control  |
| Set temperature objective                | Intake temperature (Room temperature)<br>Cooling: 18 to 30°C<br>Heating: 10 to 30°C  | Discharge temperature<br>Cooling: 14 to 25°C<br>Heating: 17 to 28°C  |
| Thermostat OFF conditions                | Cooling<br>Intake temperature < Setting temperature -0.5°C<br><br>Heating<br>Intake temperature > Setting temperature +0.5°C | Cooling<br>Discharge temperature < Setting temperature -5.0°C<br>Heating<br>Discharge temperature > Setting temperature +5.0°C for 5 minutes |
| Operation (ON/OFF/Mode/ Set temperature) | FGL controller   |  |
| Fan control                              | Fan control commands are output from the DX kit external output terminal   |  |

### 2. External controller connection

|  |   |   |
|--|---|---|
| Air conditioning control system (SET3-3)   | Intake temperature control  | Outlet temperature control  |
| Analog input system (SET3-2)               | Set temperature input / Capacity input Selection  | Set temperature input / Capacity input Selection  |
| Temperature setting                        | Temperature Setting range   | Intake temperature (Room temperature)<br>Cooling: 18 to 30°C<br>Heating: 10 to 30°C   |
|  | Thermostat OFF conditions   | Discharge temperature<br>Cooling: 14 to 25°C<br>Heating: 17 to 28°C<br><br>Cooling<br>Discharge temperature < Setting temperature -5.0°C<br>Heating<br>Discharge temperature > Setting temperature +5.0°C for 5 minutes |
| Capacity input                             | Capacity input range  | 0%, 5% to 100%  |
|  | Thermostat OFF conditions   | Controlled by external controller and EEV closed by making the capacity input 0% in cooling mode. EEV slightly opened when the Compressor operating in heating mode.  |
| Operation (ON/OFF/Mode/ Set temperature)   | Controlled by external controller, input to DX Kit external input terminal<br>*Operation from FGL controller is disabled.<br>(Only monitoring is possible)  |   |
| When error generated at external equipment | When fanmotor locked or another error was generated at the external equipment, the refrigerant cycle is stopped by inputting an error signal to the DX Kit external input terminal. (EEV is Closed) |   |
| Fan control                                | Control is performed by external equipment, but when you want to stop the fan during defrosting, use the defrost signal that is output from the DX Kit external output terminal.                    |   |

### 3-7-3 FUNDAMENTAL FUNCTIONS

#### Cooling operation

When using the cooling mode, set the temperature to a value lower than the target controlling temperature, otherwise the External refrigeration cycle equipment will not start the cooling operation.

##### An example for COOLING TEMPERATURE CONTROL time chart

TR: Target controlling temperature (Air intake temperature or Air discharge temperature)

$T_s$ : Corrected Setting temperature

Air intake temp controlling

$T_s + 0.5^\circ\text{C}$ : The threshold temperature of start of refrigerant flow

$T_s - 0.5^\circ\text{C}$ : The threshold temperature of stop of refrigerant flow

Air discharge temp controlling

$T_s + 0.5^\circ\text{C}$ : The threshold temperature of stop of refrigerant flow

$T_s - 0.5^\circ\text{C}$ : The threshold temperature of stop of refrigerant flow

#### Heating operation

- (1) When using the heating mode, set the temperature to a value higher than the current room temperature, otherwise the indoor unit will not start the heating operation.
- (2) After the start of heating operation, the fan of indoor unit will not rotate until the heater exchange is warmed up to blow out warm air.
- (3) During defrosting, the OPERATION indicator lamp flashes 6sec. ON and 2sec. OFF, and repeat. The heating operation will be temporarily interrupted.

##### An example for HEATING TEMPERATURE CONTROL time chart

$T_s$ : Corrected Setting temperature

\*: Duration of cold air prevention

TR: Target controlling temperature (Air intake temperature or Air discharge temperature)

Air intake temp controlling

$T_s - 0.5^\circ\text{C}$ : The threshold temperature of start of refrigerant flow

$T_s + 0.5^\circ\text{C}$ : The threshold temperature of stop of refrigerant flow

Air discharge temp controlling

$T_s - 0.5^\circ\text{C}$ : The threshold temperature of stop of refrigerant flow

$T_s + 0.5^\circ\text{C}$ : The threshold temperature of stop of refrigerant flow

\*When the EEV operates with the minimum pulse, and it keeps for 5 minutes.

## 3-7-4 ELECTRONIC EXPANSION VALVE CONTROL for DX-KIT

### 1. Initialization

- When the power is turned ON.
- When it has passed the limited time since the last initialization.

### 2. Operation Control

- When indoor unit stopping by Thermo-OFF condition.

| Outdoor unit Condition | EEV Condition |
|------------------------|---------------|
| OFF                    | Fully closed  |
| Cooling                | Fully closed  |
| Heating                | Fully closed  |

- When starting up  
(Cooling) Move to the cooling control base pulse in steps.  
(Heating) Move to the heating control base pulse in steps.
- Automatic operatic control  
Automatic PI control is performed based on the indoor unit heat exchanger outlet temp and inlet temp.
- Discharge airflow temperature control  
The discharge airflow temperature is controlled so that it reaches to the set-up temperature based on the difference between the discharge airflow temperature and the set-up temperature.  
Cooling operation: 1) If the discharge airflow temperature becomes 5°C lower than the set-up temperature, EEV is fully closed.  
2) If the suction airflow temperature becomes 0.5°C lower than the set-up temperature, EEV is fully closed.  
Heating operation: If the suction airflow temperature becomes 0.5°C higher than the set-up temperature, EEV is fully closed.

### 3. Special Control

- Oil recovery operation : Controlled pulse(Maximum 1400 puls)
- Test run operation : Controlled pulse.
- Freeze prevention control : Fully closed.
- Vacuuming operation : Fully open.
- Defrost operation : Controlled pulse(Maximum 1400 puls)

## 3-7-5 DRAIN PUMP OPERATION for DX-KIT

- (1) When cooling and refrigerant circulation starts, the drain pump starts simultaneously.
- (2) The drain pump operates continuously for 3 minutes after the refrigerant circulation stopped.
- (3) When the refrigent circulation is stopped by a start of indoor heat exchanger frost prevention operation, the drain pump will turn off in 1 hour after the end of indoor heat exchanger frost prevention operation.
- (4) When the water level in the drain pan rises up and then the float switch functions:
  - ① Microcomputer stops the refrigerant circulation and indoor fan motor operation.
  - ② Drain pump operates continuously for 3 minutes after the float switch is turned off.  
(Almost condensing water may be drained)
- (5) When the float switch turns ON continuously for 3 minutes, 'FAILURE INDICATION' operates.
- (6) When the float switch turns OFF within 3 minutes, the unit starts cooling operation.

## 3-7-6 FUNCTION

### Auto Restart

The air conditioner restarts with the previous setting operation.

### Freeze Prevention Control

The icing of the indoor heat exchanger is prevented during the cooling and dry mode operation.

#### (1) Starting Condition

- Compressor is operation more than 3 minutes.  
When "Heat exchanger inlet temperature  $\leq T_A$ " continues \*4 minutes or more.
- Compressor is operation more than 3 minutes.  
When "Heat exchanger outlet temperature  $\leq T_A$ " continues 4 minutes or more.

#### (2) Operation

EEV is closed.  
Fan is at the setting amount.

#### (3) Completing Condition

Heat exchanger inlet and middle temperature  $\geq T_B$   
After more than 5 minutes

\* Drain pump turns off at 60 minutes past the completion of the icing protection operation.

| $T_A$ | $T_B$ |
|-------|-------|
| 1°C   | 7°C   |

### Oil Recovery Operation / Defrost Operation

[Oil recovery operation / Defrost operation] :

It periodically returns the residual refrigerant ion oil in the indoor unit and the connection piping back to the outdoor unit , and prevents the compressor oil level from decreasing.

IR Receiver Unit LED: Operation LED

FAN output : Same operation before oil recovery operation in cooling operation or dry operation.(Heating operation: Stop)

DX-KIT EEV : Control pulse

\* During the above operation, a refrigerant noise might hear from the EEV Kit.

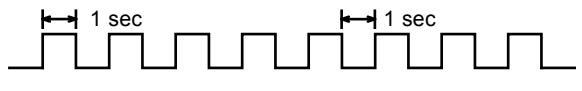

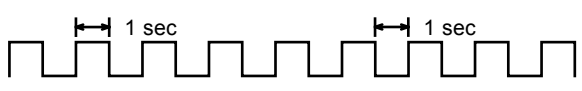

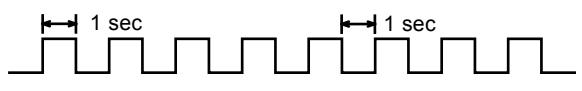

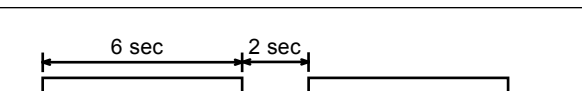

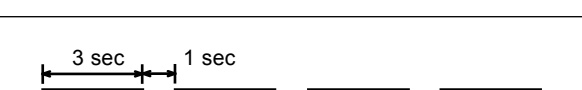

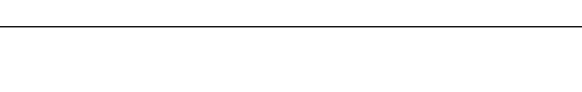

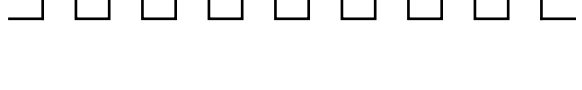

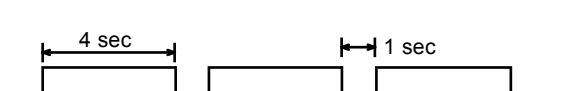

## 4. TROUBLE SHOOTING

## 4. TROUBLESHOOTING

### 4-1 NORMAL OPERATION

#### 4-1-1 Indoor Unit Display

| Indication type         | Indication Lamp | Flashing Pattern   |
|-------------------------|-----------------|--|
| Operation               | Operation LED   | Continuous lighting  |
| Anti Freeze             |                 | Continuous lighting(lowered light)   |
| Timer                   | Timer LED       | Continuous lighting(lowered light)   |
| Filter                  | Filter LED      | Continuous lighting  |
| Power Failure           | Operation LED   | ON <br>OFF   |

## 4-2 ABNORMAL OPERATION

### 4-2-1 Error code Display

An Error code is represented by 3 digit characters.

The first 2 digit means the subsection Error code, and the last 1 digit means the specifics Error code.

Ex.) Indoor unit Network communication Error

**1 4 . 3**

Subsection Error Code

Specifics Error Code

14 : Network communication Error

3 : Indoor unit Network Communication Error

Each Error code section is shown by the following target

| Subsection Error Code target   | Subsection and Specifics Error code target  |
|--|---|
| <ul style="list-style-type: none"><li>- Indoor unit (Operation / Timer / Filter) LED</li><li>- 2 / 3 Wires Remote controller</li><li>- Simple Remote controller</li><li>- Group Remote controller</li><li>- Central Remote controller</li><li>- Touch - Panel Controller</li></ul> | <ul style="list-style-type: none"><li>- Outdoor unit 7 segment Display</li><li>- Service Tool</li></ul> |

When an Error occurs, each devices indicate own abnormal detecting condtion.

In order to confirm the actual error condition, the following procedure are required.

1) Confirm the Specific Error code on the Outdoor unit 7 segment display or the Service tool.

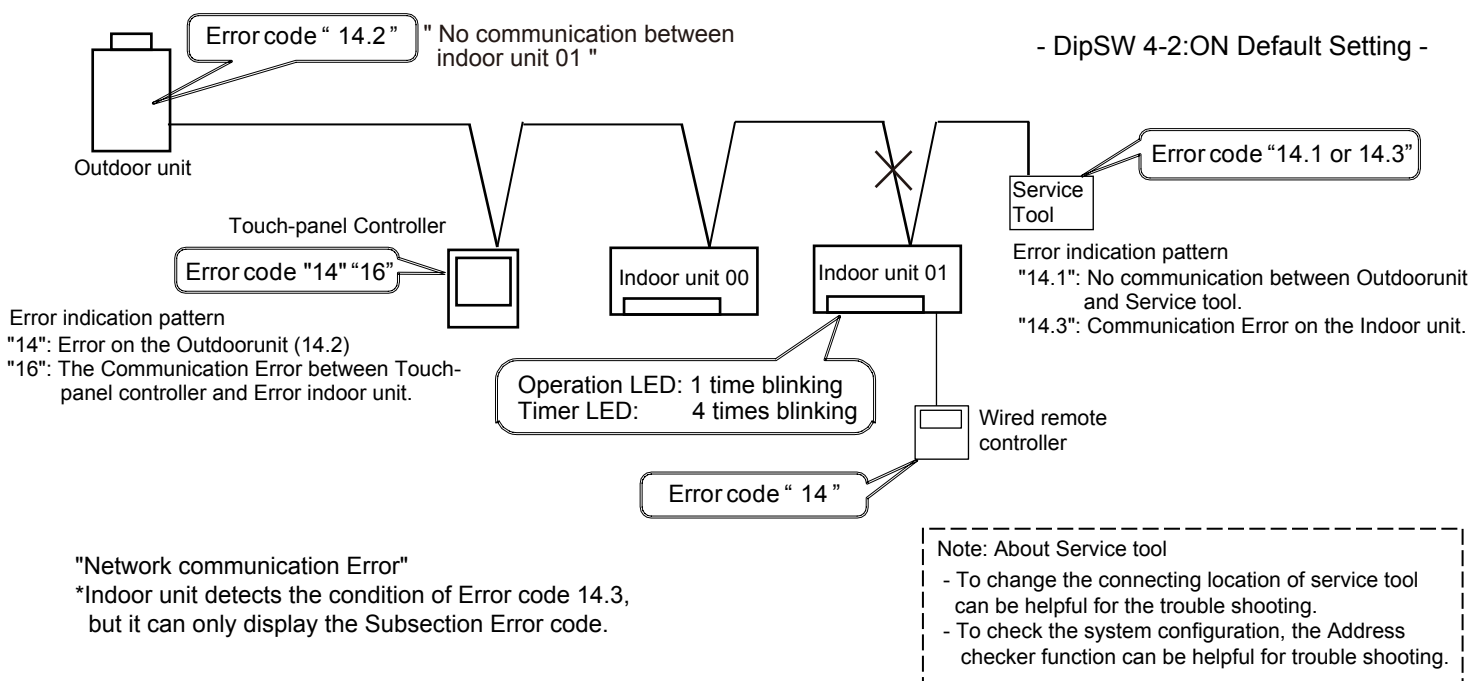

Ex.1.) When the wired remote controller shows " 9 U (Outdoor unit Error)".

Ex.2\*) When the wired remote controller shows " 4 2 (Indoor unit Heat-Ex Sensor Error)"

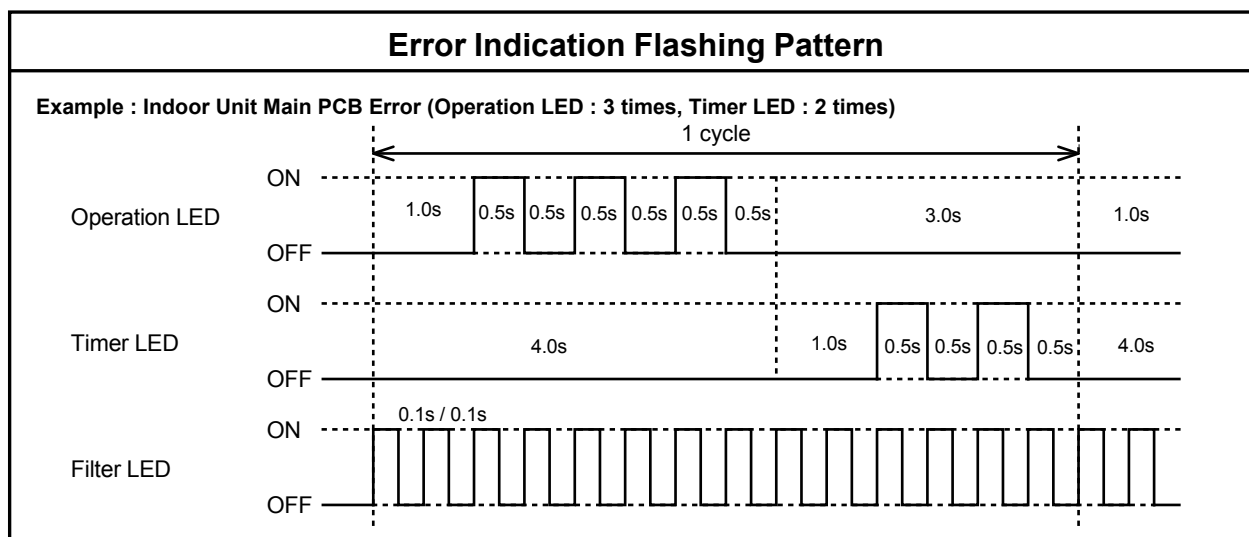

\*The Specific Error code can be indicated by service tool.

2) Confirm each Error code on each devices in case of Network communication Error.

Ex.) When the Network cable of indoor unit 00 disconnected during operating.

## 4-2-2 Indoor Unit Display

## 4-2-3 Outdoor Unit Display

### LED display

POWER MODE LED : on  
ERROR LED : blink

### Operation button

### ERROR transition

Short press : less than 3 seconds  
Long press : more than 3 seconds

If some error is newly occurred or resolved during transition, it is reflected after going back to "Annunciation".

\* Only in the case of "indoor unit abnormal (E.5U.1)", indoor unit address is shown by ENTER long press.

## 4-2-4 Remote Controller Display

### << SIMPLE REMOTE CONTROLLER >> UTY-RSKYT

#### ERROR CODE DISPLAY

If an error occurs, the following display will be shown.  
 ("Er" will appear in the set room temperature display.)  
 If "Er" is displayed, immediately contact authorized service personnel.

Faulty unit No.  
 (Remote controller address)  
 Ex. Error code display

### << WIRED REMOTE CONTROLLER 3 wire type >> UTY-RNKYT

#### ERROR CODE DISPLAY

If an error occurs, the following display will be shown.  
 ("Er" will appear in the set room temperature display.)  
 If "Er" is displayed, immediately contact authorized service personnel.

Unit number (usually 0) Error code

Ex. Error code display

### << WIRED REMOTE CONTROLLER 2 wire type >> UTY-RNRY

If an error occurred, an error icon appears on the Monitor mode screen.

1. Touch the [Status] on the Monitor mode screen.

2. Touch the [Error Information] on the Status screen.

2-digit numbers are corresponding to the error code

### << WIRED REMOTE CONTROLLER 2 wire type >> UTY-RLRY

This appears automatically on the display if an error occurs.

If an error occurs, the following display will be shown. ("⚠" will appear in the "Monitor Mode Screen")

Ex. Error code display

### << GROUP REMOTE CONTROLLER >> UTY-CGGY

#### ERROR CODE DISPLAY

The air conditioning system must be inspected if "E" (error code) appears on the timer and Clock Display, or the operation lamp is flashing.

\*1 ; Model code  
 O : Outdoor unit  
 I : Indoor unit  
 G : Group remote controller  
 R : Converter

Ex. Error code display

## 4-2-5 Trouble shooting index - Error code List 1/2 -

(\*1) This will not be displayed on indoor unit which Error Report Target (function setting 47 of indoor unit) is set "for administrator".

(\*2) The System condition can change to ① (Trouble Level 1) by changing DIP SW (SET 4-1:OFF)

(\*3) Even if power is reset, this Error cannot release. In Error release, you need to solving the problem and operate the push switch and a and apply "Error reset" (F3-40) after power restart.

(\*4) When one of outdoor unit on the multi connection detects these Error, the backup operation can activate by using of remaining outdoorunit(s)  
Please check each trouble shooting, and read the caution before using the backup operation.

### << Error code which manual error release will be required >>

- A5.1 Low pressure abnormal
- 84.1 Current sensor 1 error
- 93.1 Inverter compressor start up error
- 94.1 Trip detection
- A1.1 Discharge temperature 1 abnormal
- A3.1 Compressor 1 temperature abnormal
- 97.1 Outdoor unit fan motor lock error
- 97.5 Fan motor temperature abnormal
- 97.9 Fan motor driver abnormal
- 68.2 Rush current limiting resister temp rise protection
- 95.5 Compressor motor loss of synchronization
- A6.3 Outdoor heat exchanger 1 gas temperature abnormal
- A6.4 Outdoor heat exchanger 2 gas temperature abnormal

## 4-2-7 TROUBLE LEVEL OF SYSTEM

### << System Condition when Outdoor Unit Error is occurred >>

| System Condition   | Outdoor unit Condition                                    | Trouble Level   |   |
|--|---|---|---|
|  |   | 1   | 2   |
|  |   | Not indicated on Indoor Unit and Peripheral unit.<br>Indicated on Service Tool. | Indicated on Indoor Unit (*1)<br>and Peripheral unit.<br>Indicated on Service Tool.   |
| ①<br>System is not stopped compulsorily<br><br>Operation continues | Abnormal LED indication<br><br>Outdoor unit does not stop | - 14.1 Outdoor unit network communication 1 error                               | - 62.3 Outdoorunit EEPROM access error<br>- 62.8 EEPROM data corrupted error<br>- 73.5 Heat Ex.1 liquid temp. sensor error<br>- 73.7 Heat Ex.2 liquid temp. sensor error<br>- 75.1 Suction gas temp sensor error<br>- 82.2 Sub-cool Heat Ex. gas outlet temp. sensor error<br>- 83.1 Liquid pipe temp. sensor 1 error<br>- 83.2 Liquid pipe temp. sensor 2 error  |
| ②<br>System is compulsorily stopped (*4)                           | Abnormal LED indication<br>Outdoor unit stop              | - 67.2 Inverter PCB short interruption detection                                | - 62.6 Inverter communication error<br>- 63.1 Inverter error<br>- 68.2 Rush current limiting resister temp. rise protection (*3)<br>- 71.1 Discharge Temp sensor 1 error<br>- 72.1 Compressor Temp sensor 1 error<br>- 73.4 Heat Ex. 1 gas temp sensor error<br>- 73.6 Heat Ex. 2 gas temp sensor error<br>- 74.1 Outdoor Temp sensor error<br>- 77.1 Heat sink Temp sensor error<br>- 84.1 Current sensor 1 error (*3)<br>- 86.1 Discharge pressure sensor error<br>- 86.3 Suction pressure sensor error<br>- 86.4 High pressure switch 1 error<br>- 93.1 Inverter compressor start up error (*3)<br>- 94.1 Trip detection (*3)<br>- 95.5 Comp. motor loss of synchronization (*3)<br>- 97.1 Outdoor unit fan motor lock error (*3)<br>- 97.5 Fan motor temperature abnormal (*3)<br>- 97.9 Fan motor driver abnormal (*3)<br>- A1.1 Discharge temperature 1 abnormal (*3)<br>- A3.1 Compressor1 temperature abnormal (*3)<br>- A4.1 High pressure abnormal<br>- A4.2 High pressure protection1<br>- A6.3 Outdoor Heat Ex. 1 gas temp. abnormal (*3)<br>- A6.4 Outdoor Heat Ex. 2 gas temp. abnormal (*3)<br>- AC.4 Heat sink temperature abnormal |
| ③<br>System is compulsorily stopped                                | Abnormal LED indication<br>Outdoor unit stop              |   | - 13.1 Communication error between outdoor unit<br>- 14.2 Outdoor unit network communication 2 error<br>- 14.5 The number of indoor unit shortage (*2)<br>- 61.5 Outdoor unit reverse phase, missing phase wire error<br>- 69.1 Outdoor unit transmission PCB parallel communication error<br>- 9A.1 Coil1 (Expansion valve1) error<br>- 9A.2 Coil2 (Expansion valve2) error<br>- 9A.3 Coil3 (Expansion valve3) error<br>- A5.1 Low pressure abnormal (*3)  |

(\*1) This will not be displayed on indoor unit which Error Report Target (function setting 47 of indoor unit) is set "for administrator".

(\*2) The System condition can change to ① (Trouble Level 1) by changing DIP SW (SET 4-1:OFF)

(\*3) Even if power is reset, this Error cannot release. In Error release, you need to solving the problem and operate the push switch and a and apply "Error reset" (F3-40) after power restart.

(\*4) When one of outdoor unit on the multi connection detects these Error, the backup operation can activate by using of remaining outdoorunit(s)  
Please check each trouble shooting, and read the caution before using the backup operation.

### << Error code which manual error release will be required >>

A5.1 Low pressure abnormal  
84.1 Current sensor 1 error  
93.1 Inverter compressor start up error  
94.1 Trip detection  
A1.1 Discharge temperature 1 abnormal  
A3.1 Compressor 1 temperature abnormal  
97.1 Outdoor unit fan motor lock error  
97.5 Fan motor temperature abnormal  
97.9 Fan motor driver abnormal  
68.2 Rush current limiting resister temp rise protection  
95.5 Compressor motor loss of synchronization  
A6.3 Outdoor heat exchanger 1 gas temperature abnormal  
A6.4 Outdoor heat exchanger 2 gas temperature abnormal  
A4.1 High pressure Abnormal  
86.4 High pressure SW 1 Error

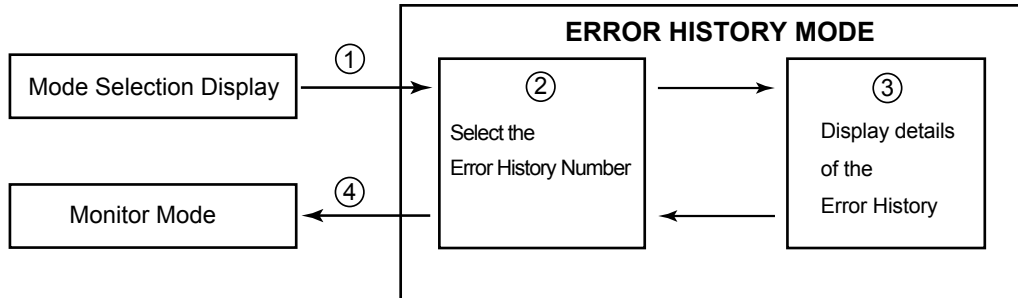

## 4-2-8 ERROR HISTORY MODE

When the abnormality occurred, the Outdoor unit memorizes the history of error codes up to 10 and it can be displayed on 7 segments LED.

It is an effective means to examine abnormality that occurred in the past.

\*The error history can be cleared by setting to F3-30.

Refer to the following for the procedure.

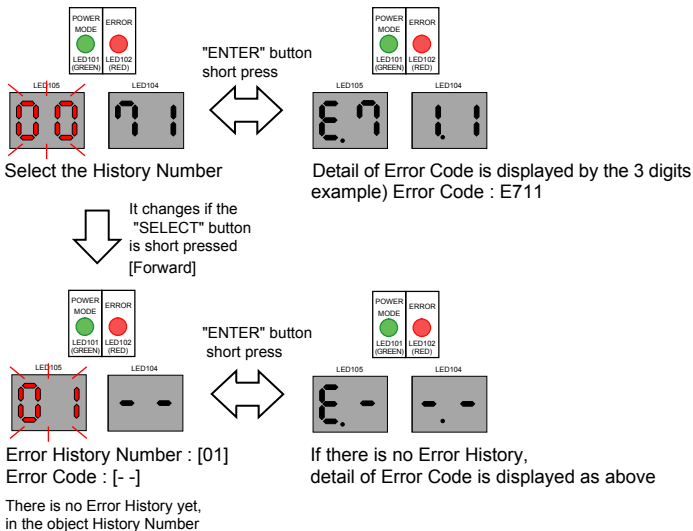

### ① Change to the Error History Mode from the Mode Selection Display

### ② Select the Error History Number

### ③ Check the detail of the Error History

### ④ End of the Error History mode

| <b>Detective Actuators:</b><br>Indoor unit Controller PCB circuit<br>Indoor unit Communication PCB | <b>Detective details:</b><br>When the cut-off of network communication is detected (more than 90 seconds passed since the last receipt of Outdoor unit signal). |
|--|---|

**Forecast of Cause :**

1. Outside cause    2.Connection failure    3. Communication PCB failure    4. Controller PCB failure

Check Point 1 : Check if any outside cause such as voltage drop or noise

- ⚙ Instant voltage drop ----- Check if there is any electric equipment with a large load within the same circuit.
- ⚙ Momentary power failure ----- Check contact failure or leak current in power supply circuit  
>>Check power supply for Outdoor Unit as well.
- ⚙ Check if there is any equipment that causes harmonic wave near the power cable  
(Neon light bulb or any electronic equipment which causes harmonic wave). And check the complete insulation of grounding.  
>>If the same symptom does not reappear after resetting the power, possibility of noise is high.

Check Point 2 : Check the connection

After turning off the power, check and correct followings.

- ☐ Is Indoor Communication PCB loose?
- ☐ Check loose or removed connection of communication line Indoor unit => Outdoor unit.  
Refer to SERVICE INFORMATION Network communication Abnormal
- ☐ When the signal amplifier is connected , Check the error indication of signal amplifier. ( Refer to the installation manual)

Check Point 3 : Check Communication PCB

- ☐ Replace Communication PCB of the Indoor units that have the error.

Check Point 4 : Check Controller PCB

- ☐ Replace controller PCB of the Indoor units that have the error.

| <input type="checkbox"/> Communication PCB connection check<br><input type="checkbox"/> Communication PCB check |

|  |
|--|
| <b>Check Point 6 : Replace Main PCB and Communication PCB (indoor unit/ outdoor unit)</b>        |
| <input type="checkbox"/> Change Main PCB and Communication PCB, and set up the original address. |

#### **Attention!!**

In case of DIP-SW SET4-1 is ON(factory setting), If this error occurs, system stops. In case of DIP-SW SET4-1 is OFF, If this error occurs, system does not stop.

If the failure indoor unit is pinpointed and it needs to erase the error indication, it can be reset by function setting (F3-41: Maximum memorized indoor unit number reset).

#### **Caution!!**

Even if normal, this error occurs temporarily by the timing of the power ON of outdoor unit, indoor unit, and signal amplifier.

In this case, please wait for 5 minutes after turning on all the equipments.

Also, Error on Model information upon model information test of EEPROM, or Model information of EEPROM not possible to recover. |
| <b>Forecast of Cause :</b><br>1. Outside cause    2. Connection failure of electric components    3. Controller PCB defective  |  |

#### **Note : EEPROM**

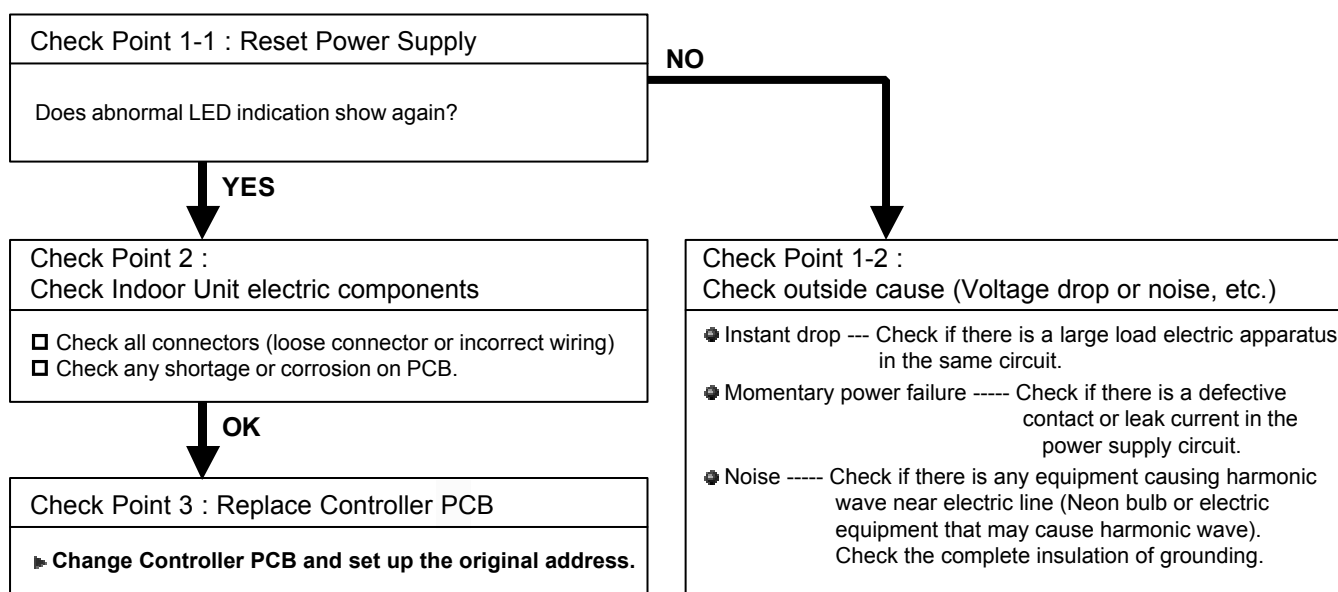

EEPROM(Electronically Erasable and Programmable Read Only Memory) is a non-volatile memory which keeps memorized information even if power is turned off. It can change the contents electronically. To change the contents, it uses higher voltage than normal, and it can not change a partial contents. (Rewriting shall be done upon erasing the all contents.) There is a limit in a number of rewriting.

#### Caution

By changing of DIP SW 4-2 to ON, the Back-up operation can start when the active outdoor unit exists on the multi outdoor unit connection. (Stand alone outdoor unit is impossible)

The following conditions will be concerned in use of back-up operation. (Please do not use the system with back-up operation for long time.)

- The operating compressor life time becomes shorter.
- The operating performance may drop due to the limited active compressor(s).
- The compressor may stop frequently by protection controlling.

\*In order to keep the operating capacity, the release of the Low noise mode setting might be necessary.

**Trouble shooting 39 E73. 6**  
**OUTDOOR UNIT Error Method:**  
**Heat Ex.2 Gas Temp Sensor Error**

**Indicate or Display:**  
**Outdoor Unit : E. 7 3. 6**  
**Indoor Unit : Operation LED 9 times Flash, Timer LED 15 Times Flash, Filter LED Continuous Flash.**  
**Error Code : 9 U / 7 3**

**Detective Actuators:**

Heat ex.2 gas temp. sensor

**Detective details:**

- Heat ex.2 gas temp. sensor short or open detected

**Forecast of Cause :**

1. Connector connection defective, open
2. Sensor defective
3. Main PCB defective

Check Point 1 : Check the connector connection and cable open

- ☐ Connector connection state check
- ☐ Cable open check

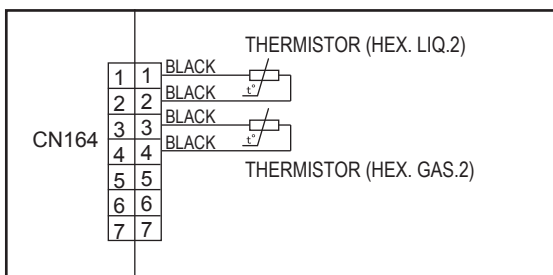

Check Point 2: Check the sensor

- ☐ Sensor characteristics check (Disconnect the sensor from the PCB and check.)  
 \* For the sensor characteristics, refer to the "Service Parts Information 24".

Check Point 3 : Check voltage of Main PCB (DC5.0V)

- ☐ Main PCB (CN164: 3-4) voltage value = 5V  
Remove the sensor from Main PCB, check the voltage.

Heat ex.2 gas temp. sensor (CN164: 3-4)

► **If the voltage does not appear, replace Main PCB and set up original address.**

**Caution**

By changing of DIP SW 4-2 to ON, the Back-up operation can start when the active outdoor unit exists on the multi outdoor unit connection. (Stand alone outdoor unit is impossible)

The following conditions will be concerned in use of back-up operation. (Please do not use the system with back-up operation for long time.)

- The operating compressor life time becomes shorter.
- The operating performance may drop due to the limited active compressor(s).
- The compressor may stop frequently by protection controlling.

\*In order to keep the operating capacity, the release of the Low noise mode setting might be necessary.

### Check Point 3 : Check voltage of Main PCB (DC5.0V)

- ❑ Main PCB (CN164: 1-2) voltage value = 5V

Remove the sensor from Main PCB, check the voltage.

A square icon with a thick border. Inside, the letters 'DC' are in a large, bold, sans-serif font. Below the letters, there is a circle with a diagonal line from the top-left to the bottom-right, and two small circles to its right, resembling a standard electrical symbol for direct current.

A diagram of a 7-pin connector labeled 'CN164'. The pins are numbered 1 through 7. Pins 1 and 2 are connected to a thermistor labeled 'THERMISTOR (HEX. LIQ.2)'. Pins 3 and 4 are connected to a thermistor labeled 'THERMISTOR (HEX. GAS.2)'. The wires for these connections are labeled 'BLACK'. Each thermistor symbol is represented by a rectangle with a diagonal line and a small 't' in a circle.

Heat ex.2 liquid temp. sensor (CN164: 1-2)

- **If the voltage does not appear, replace Main PCB and set up original address.**

| Check Point 2: Check the sensor   |
| <input type="checkbox"/> Sensor characteristics check (Disconnect the sensor from the PCB and check.)<br>* For the sensor characteristics, refer to the "Service Parts Information 24". |

### Check Point 3 : Check voltage of Main PCB (DC5.0V)

- ❑ Main PCB (CN144:1-3) voltage value = 5V

Remove the sensor from Main PCB, check the voltage.

The diagram illustrates the connection of an outdoor temperature sensor to the Main PCB. On the left, a connector labeled 'CN144' has three pins numbered 1, 2, and 3. To the right of these pins is a thermistor symbol labeled 'THERMISTOR (OUT TEMP.)'. Three wires, each labeled 'BLACK', connect the pins to the thermistor: pin 1 to the top terminal, pin 2 to the middle terminal, and pin 3 to the bottom terminal. The thermistor symbol consists of a rectangle with a diagonal line and a small circle with a cross inside.

The image shows a standard DC voltage symbol. It consists of a rectangle containing the letters 'DC'. Below the rectangle is a circle with a diagonal line from the top-left to the bottom-right, and two small circles to its right.

Outdoor temp. sensor (CN144:1-3)

- If the voltage does not appear, replace Main PCB and set up original address.

|   |
|---|
| <b>Caution</b><br>By changing of DIP SW 4-2 to ON, the Back-up operation can start when the active outdoor unit exists on the multi outdoor unit connection. ### Check Point 3 : Check voltage of Inverter PCB (DC5.0V)

- ❑ Inverter PCB (CN360: 1-2) voltage value = 5V

Remove the sensor from Inverter PCB, check the voltage.

The diagram shows a 2-pin connector labeled CN360. The pins are numbered 1 and 2. Pin 1 is connected to a wire labeled 'BLACK'. Pin 2 is connected to a wire labeled 'BLACK'. A thermistor sensor, labeled 'THERMISTOR (HEATSINK)', is shown connected to the 'BLACK' wire from pin 2. The sensor is represented by a rectangle with a diagonal line and a small circle at the end, with a 'V' symbol below it.

A square box containing the letters 'DC' in a large, bold, sans-serif font. Below the box is a circle with a diagonal line from the top-left to the bottom-right, and two small circles to its right.

Heat sink temp. sensor (CN360: 1-2)

- If the voltage does not appear, replace Inverter PCB.

#### Caution

By changing of DIP SW 4-2 to ON, the Back-up operation can start when the active outdoor unit exists on the multi outdoor unit connection. (Stand alone outdoor unit is impossible)

The following conditions will be concerned in use of back-up operation. (Please do not use the system with back-up operation for long time.)

- The operating compressor life time becomes shorter.

- The operating performance may drop due to the limited active compressor(s).

- The compressor may stop frequently by protection controlling.

\*In order to keep the operating capacity, the release of the Low noise mode setting might be necessary.

## 4-2-10 TROUBLE SHOOTING NO ERROR CODE

### Trouble shooting 72

#### Indoor Unit - No Power (Except wall mounted type)

#### Forecast of Cause :

1. Power Supply failure
2. Outside cause
3. Electrical Component defective

#### Check Point 1 : Power supply

- Is not the breaker down?
  - Instant drop ----- Check if there is a large load electric apparatus in the same circuit.
  - Momentary power failure ----- Check if there is a defective contact or leak current in the power supply circuit.
  - Noise ----- Check if there is any equipment causing harmonic wave near electric line (Neon bulb or electric equipment that may cause harmonic wave).  
Check the complete insulation of grounding.

OK

#### Check Point 2 : Fuse of Indoor unit

- Is not open circuit ?  
If the fuse was open state, check the cause of short circuit on the AC circuit before replacing the spare parts.

OK

NG (Short circuit on AC circuit)

#### Check Point 3 : Short circuit check on AC circuit

- Check on short circuit state step by step
1. Disconnect AC input wire on the terminal board.
  2. Disconnect Drain pump AC input connector
  3. Disconnect FAN motor AC input connector

NG (Short circuit on AC circuit)

Replace power supply PCB

NG (Short circuit )

#### Check Point 4 : Resistor R101

- Check Resistor R101, Open / Short circuit check

NG  
(Open circuit on R101)

Replace power supply PCB

OK (Not Open )  
3.3 Ohm  $\pm$  5%

#### Check Point 5 : Short circuit check on DC supply circuit

- Disconnect CN102 and check short circuit step by step.
1. Check short circuit between the pin No. 1 and the pin No.6
  2. Check short circuit between the pin No. 2 and the pin No.6

OK (Open circuit )

#### Check Point 6 : Short circuit check on DC13.5V circuit

- Disconnect CN 4 (DC power supply) , and check short circuit between the pin No. 1 and the pin No.6 step by step
1. Disconnect EEV connector
  2. Disconnect SP motor
  3. Disconnect Wired Remote Controller
  4. Disconnect Transmission PCB

OK (Open circuit)

#### Check Point 7 : Short circuit check on DC5.0V circuit

- Disconnect CN 4 (DC power supply) , and check short circuit between the pin No. 2 and the pin No.6 step by step
1. Disconnect Indicator PCB
  2. Disconnect SW PCB
  3. Disconnect Transmission PCB

NG (Short circuit )

Replace Main PCB

NG (Short circuit )

## Trouble shooting 73

### Indoor Unit - No Power (Wall mounted type)

#### Forecast of Cause :

1. Power Supply failure 2. Outside cause 3. Electrical Component defective

#### Check Point 1 : Power supply

- ☐ Is not the breaker down?
  - Instant drop ----- Check if there is a large load electric apparatus in the same circuit.
  - Momentary power failure ----- Check if there is a defective contact or leak current in the power supply circuit.
  - Noise ----- Check if there is any equipment causing harmonic wave near electric line (Neon bulb or electric equipment that may cause harmonic wave).
- Check the complete insulation of grounding.

↓ **OK**

#### Check Point 2 : Fuse or Thermal fuse of Indoor unit

- ☐ Is not open circuit ?  
If the fuse was open state, check the cause of short circuit on the AC circuit before replacing the spare parts.

↓ **NG (Short circuit on AC circuit)**

#### Check Point 3 : Short circuit check on AC circuit

- ☐ Disconnect AC power input wires and check short circuit

↓ **NG (Short circuit on AC circuit)**

#### Check Point 4 : Power supply circuit of FAN Motor

- ☐ Disconnect FAN motor and Check short circuit

↓ **NG (Short circuit)**

Replace Main PCB

**NG (Short circuit )**

#### Check Point 5 : Resistor R101

- ☐ Check Resistor R101, Open / Short circuit check

↓ **NG  
(Open circuit on R101)**

↓ **OK (Not Open)  
2.2 Ohm ± 5%**

#### Check Point 6 : Short circuit check on DC13.5V circuit

- Check short circuit between Pin No.1 and Pin No. 6 of CNB01 (DC 13.5V circuit )
  1. Disconnect EEV connector
  2. Disconnect SP motor
  3. Disconnect Wired Remote Controller
  4. Disconnect Transmission PCB

↓ **OK (Open circuit)**

#### Check Point 7 : Short circuit check on DC5.0V circuit

- Check short circuit between Pin No.5 and Pin No. 7 of CN3 (TEST) (DC 5.0V circuit )  
or  
Pin No.1 and Pin No.7 of CN18
  1. Disconnect Indicator PCB
  2. Disconnect SW PCB
  3. Disconnect Transmission PCB

**NG (Short circuit )**

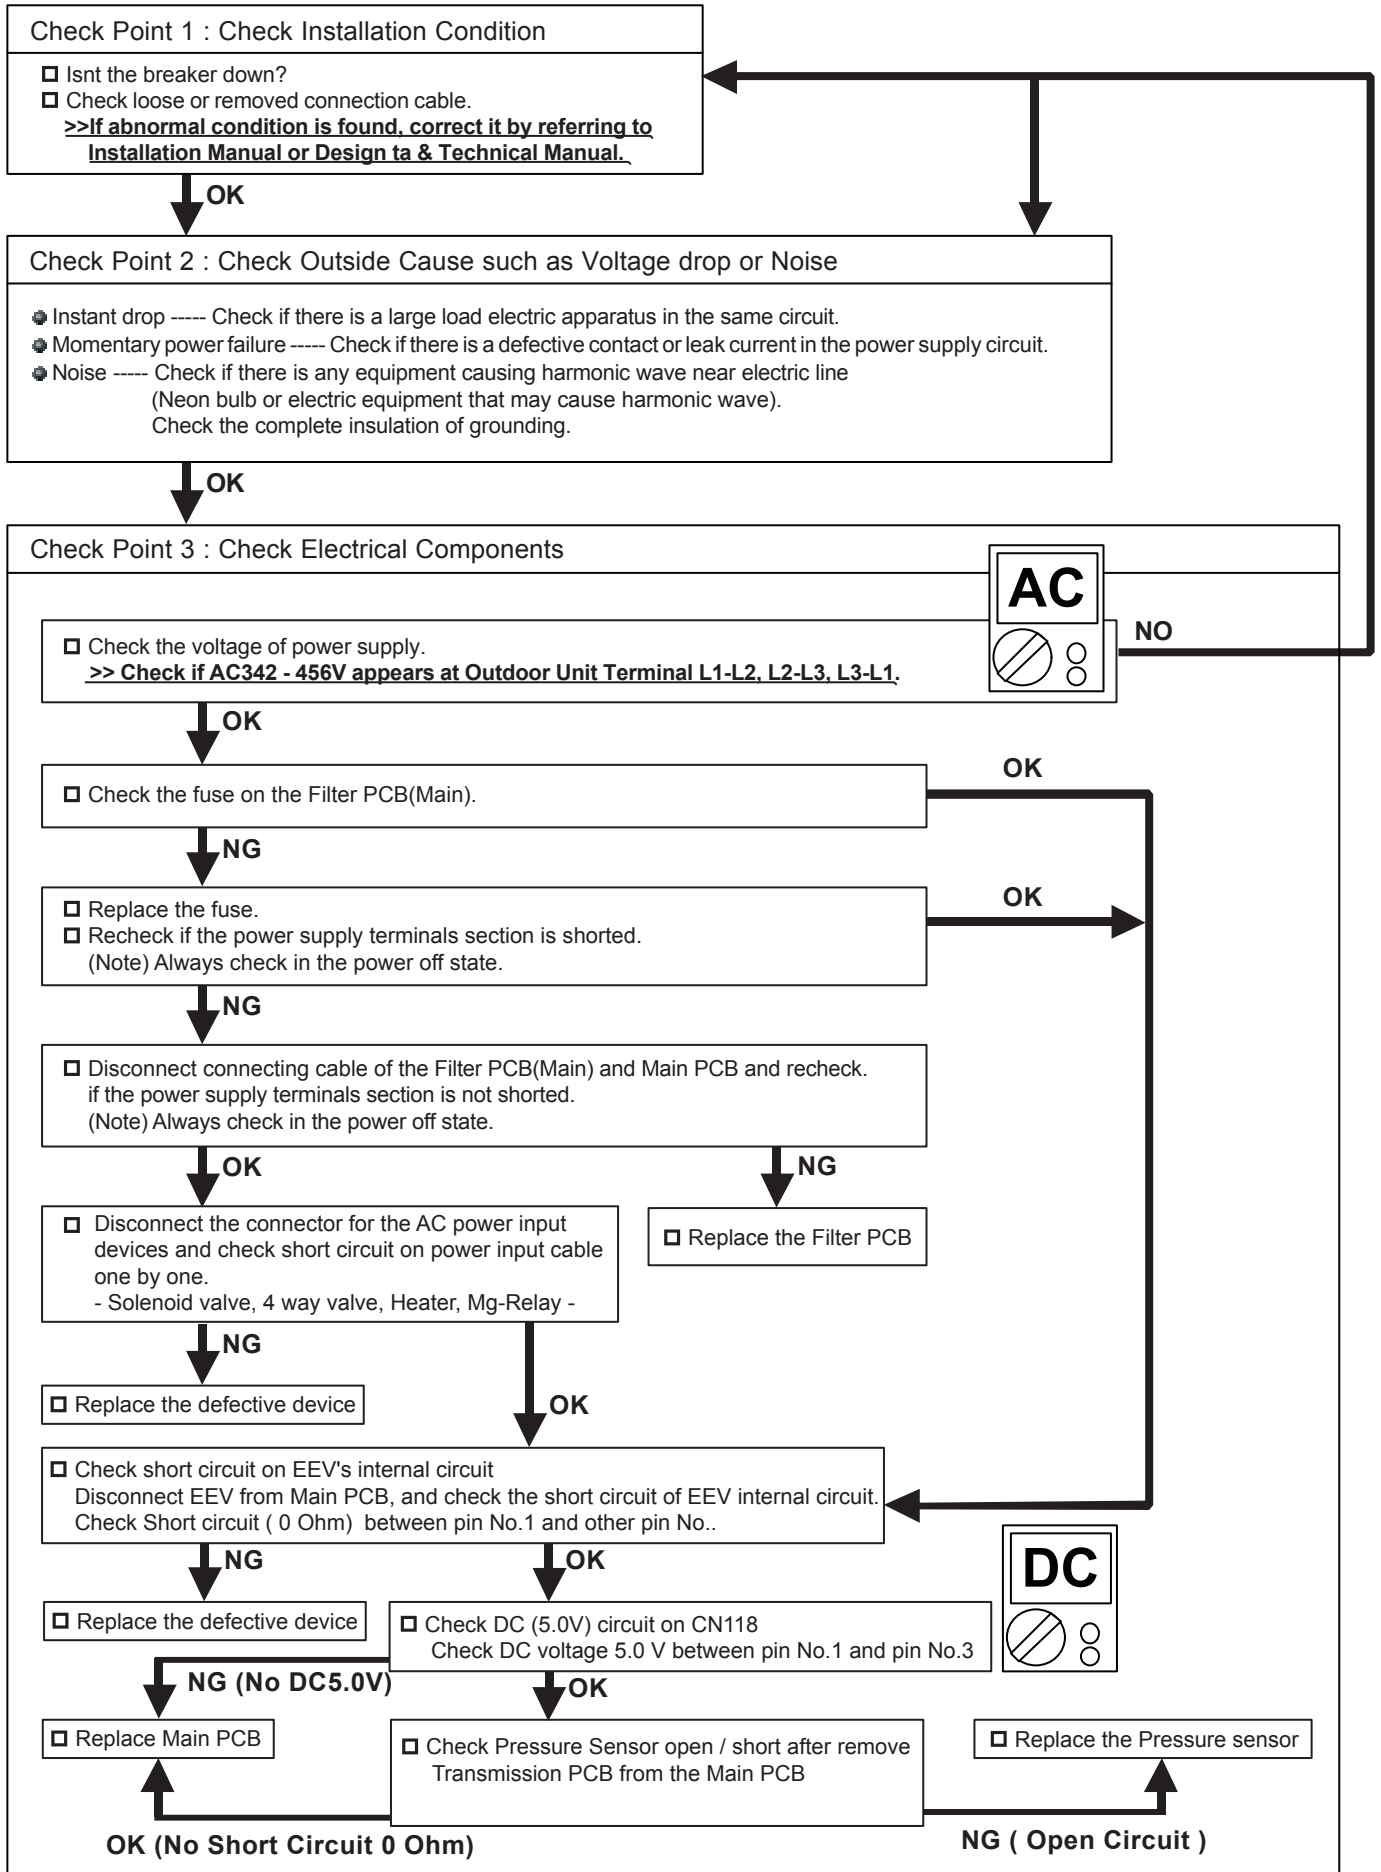

## Trouble shooting 74

### Outdoor Unit - No Power

#### Forecast of Cause :

1. Power Supply failure 2. Outside cause 3. Electrical Components defective

## Trouble shooting 76

### No Operation (Power is ON)

#### Forecast of Cause :

1. Setting/Connection failure
2. Outside cause
3. Electrical Component defective

#### Check Point 1 : Check indoor and outdoor installation condition

- ❑ Indoor Unit - Check incorrect wiring between Indoor Unit- Remote Control, or terminals between Indoor Units.  
Or, check if there is an open cable connection.
  - ❑ Check address setting (Are all the address of Indoor unit, Outdoor unit correct?)
  - ❑ Are these Indoor Unit, Outdoor Unit, and Remote Control suitable model numbers to connect?
- >> If there is some abnormal condition, correct it by referring to Installation manual and Design & Technical Manual.**

OK

Turn off Power and check/correct followings.

- ❑ Isn't Communication PCB of Indoor Unit removed?
- ❑ Is there loose or removed communication line of Indoor Unit and Outdoor Unit?
- ❑ Check Terminator (DIP-SW SET 5) is installed on Outdoor Main PCB.
- ❑ Check loose or removed communication line between each Outdoor Unit.
- ❑ Check loose Communication PCB of each Outdoor Unit.
- ❑ Check network cable connection between Indoor unit - Outdoor unit.

OK

#### Check Point 2 : Check outside cause at Indoor unit and Outdoor unit (Voltage drop or Noise)

- ⚙ Instant drop -----Check if there is a large load electric apparatus in the same circuit.
- ⚙ Momentary power failure ----- Check if there is a defective contact or leak current in the power supply circuit.
- ⚙ Noise ----- Check if there is any equipment causing harmonic wave near electric line  
(Neon bulb or electric equipment that may cause harmonic wave).  
Check the complete insulation of grounding.

OK

#### Check Point 3 : Check Electrical Components at Indoor unit, Outdoor unit

- ❑ Indoor Unit - Check the voltage between pins 1-3 of the connector (on the control PCB) for connection with the remote controller.  
In case of 2 wires WRC, Check the voltage between pins 1-2.  
**>> If it is DC12V, Remote Control is defective (Controller PCB is normal) >> Replace Remote Control**  
**>> If it is DC 0V, Controller PCB is defective (Check Remote Control once again) >> Replace Controller PCB**
- ❑ If some of Indoor unit does not operate, replace the Communication PCB of the non-operative Indoor Unit.  
**>> If the symptom does not change, replace Controller PCB of Indoor Unit.**
- ❑ If all of Indoor Units do not operate, check the connection between Main PCB and Communication PCB of Outdoor Unit (Main Unit).  
**>> If the symptom does not change, replace Communication PCB of Outdoor Unit (Main Unit).**  
**(If it did not work, replace Main PCB.)**

## Trouble shooting 77

### No Cooling / No Heating

#### Forecast of Cause :

1. Indoor Unit error
2. Outdoor Unit error
3. Effect by Surrounding environment
4. Connection Pipe / Connection Wire failure
5. Refrigeration cycle failure

#### Check Point 1 : Check Indoor Unit

- ☐ Does Indoor Unit FAN run on HIGH FAN?
- ☐ Is Air Filter dirty?
- ☐ Is Heat Exchanger clogged?

#### Check Point 2 : Check Outdoor Unit Operation

- ☐ Check if Outdoor Unit is operating
- ☐ Check any objects that obstruct the air flow route.
- ☐ Check clogged Heat Exchanger.
- ☐ Is the pipe length setting (Push Switch "MODE/EXIT", "SELECT", "ENTER") suitable?
- ☐ Is the Valve open?

#### Check Point 3 : Check Site Condition

- ☐ Is capacity of Indoor Unit fitted to Room size?
- ☐ Any windows open? Or direct sunlight ?

#### Check Point 4 : Check Indoor/Outdoor Installation Condition

- ☐ Check connection pipe (specified pipe length & Pipe diameter?)
- ☐ Check any loose or removed communication line.
- >> If there is an abnormal condition, correct it by referring to Installation Manual or Design & Technical Manual.**

#### Check Point 5 : Check Refrigeration Cycle

- ☐ Check if Strainer is clogged (Refer to the figure at right).
- ☐ Measure Gas Pressure and if there is a leakage, correct it.
- >> When recharging the refrigerant, make sure to perform vacuuming, and recharge the specified amount.**
- ▶ Check EEV (Refer to the Service Parts Information)
- ▶ Check Solenoid Valve (Refer to the See Service Parts Information)
- ▶ Check Compressor (Refer to the See Service Parts Information)
- ▶ Check 4 way valve (Refer to the See Service Parts Information)

#### Attention!!

Strainer normally does not have temperature difference between inlet and outlet as shown in (1), but if there is a difference like shown in (2), there is a possibility of inside clogged. In this case, replace Strainer.

## Trouble shooting 78

### Abnormal Noise

#### Forecast of Cause :

1. Abnormal installation (Indoor / Outdoor)
2. Fan failure(Indoor/Outdoor)
3. EEV failure (Indoor)
4. Compressor failure (Outdoor)

#### Diagnosis method when Abnormal Noise is occurred

Abnormal noise is coming from Indoor Unit  
(Check and correct followings)

- ☐ Is Main Unit installed in stable condition?
- ☐ Is the installation of Air suction grille and front panel normal?
- ☐ In case of Duct type : Is Static Pressure range normal?  
(Refer to Data & Technical Manual)

↓ OK

- ☐ Is Fan broken or deformed?
- ☐ Is the screw of Fan loose?
- ☐ Is there any object which obstruct the Fan rotation?

#### **Attention!!**

If Refrigerant Noise is occurring, Check if the Indoor and Outdoor Thermistor is wrongly installed. Check and correct the thermistor.

Abnormal noise is coming from Outdoor Unit  
(Check and correct followings)

- ☐ Is Main Unit installed in stable condition?
- ☐ Is Bell Mouth installed normally?

↓ OK

- ☐ Is Fan broken or deformed?
- ☐ Is the screw of Fan loose?
- ☐ Is there any object which obstruct the Fan rotation?

↓ OK

- ☐ Check if vibration noise by loose bolt or contact noise of piping is happening.

↓ OK

- ☐ Is Compressor locked?  
>> Check Compressor (Service Parts Information 2,3)

## Trouble shooting 79

### Water Leaking

#### Forecast of Cause :

1. Erroneous installation
2. Drain hose failure
3. Float Switch failure

#### Diagnosis method when water leak occurs

- ☐ Is Main Unit installed in stable condition?
- ☐ Is Main Unit broken or deformed at the time of transportation or maintenance?

OK

- ☐ Is Drain Hose connection loose?
- ☐ Is there a trap in Drain Hose?
- ☐ Is Drain Hose clogged?

OK

- ☐ Is Fan rotating?  
>> Check Fan Motor (Service Parts Information 19, 20)

OK

- ☐ Is Float Switch defective?  
>> Check Float Switch (Refer to Trouble Shooting 26)

#### Diagnosis method when water is spitting out

- ☐ Is the filter clogged?

OK

- ☐ Check Gas Pressure and correct it if there was a gas leak.

#### **Attention!!**

If water is leaking from the Indoor Unit that is not in operation, there is a possibility of Indoor EEV is not closed.

**=> Check EEV (Service Parts Information )**

## Trouble shooting 80

### Outdoor air unit- No Power

#### Forecast of Cause :

1. Power Supply failure
2. Outside cause
3. Electrical Component defective

#### Check Point 1 : Power supply

- ❑ Is not the breaker down?
  - Instant drop -----Check if there is a large load electric apparatus in the same circuit.
  - Momentary power failure ----- Check if there is a defective contact or leak current in the power supply circuit.
  - Noise ----- Check if there is any equipment causing harmonic wave near electric line (Neon bulb or electric equipment that may cause harmonic wave).  
Check the complete insulation of grounding.

↓**OK**

#### Check Point 2 : Check Protector (20A)

- ❑ Check protector open / short  
If the protector is open circuit, replace it.

↓**OK (No short circuit)**

#### Check Point 3 : Check AC line

- ❑ Check AC line (L-N) open / short

↓**NG (Short circuit)**

#### Check Point 4 : Check short circuit Filter PCB

- ❑ Disconnect the wire between Filter PCB and reactor, check short circuit of AC line.  
If there is short circuit, replace the Filter PCB.

↓**OK (No short circuit)**

#### Check Point 5 : Check short circuit Diode bridge

- ❑ Connect the disconnected wire(s) on the check point 4, disconnect the wire between Diode bridge and Capacitor, check short circuit of AC line.  
If there is short circuit, replace the Diode bridge.

↓**OK (No short circuit)**

#### Check Point 6 : Check short circuit Capacitor

- ❑ Connect the disconnected wire(s) on the check point 5, disconnect the wire between Capacitor and Filter PCB, check short circuit of AC line.  
If there is short circuit, replace the Capacitor.

↓**OK (No short circuit)**

#### Check Point 7 : Check short circuit Power supply PCB

- ❑ Connect the disconnected wire(s) on the check point 6, disconnect the wire of Fan motor, check short circuit of AC line.  
If there is short circuit, replace the Power supply PCB.

↓**OK (No short circuit)**

#### Check Point 8 : Check Fan Motor

- ❑ Check open / short of FAN motor  
Refer to the Service Parts Information 20.  
If there is short circuit, replace FAN motor.

↓**OK (No short circuit)**

#### Check Point 9 : Short circuit check on DC circuit

- Disconnect the connector (CN200) on the Power supply PCB and check the short circuit
1. DC12V line ( CN200 Pin 1 - 5 )
  2. DC 5V Line ( CN200 Pin 1 - 3 )
  3. DC 15V-1 Line ( CN500 Pin 3 - 4 )
  4. DC 15V-2 Line ( CN530 Pin 3 - 4 )
- If one of them is short circuit, replace the Power supply PCB

↓**OK (No short circuit)**

#### Check Point 10 : Check short circuit of actuators (for DC12V)

- ❑ Disconnect the CN10 (EEV1) on the Main PCB, and check short circuit on Main PCB CN 4 Pin 1 - 5.  
If the short circuit disappears, replace the EEV coil.
- ❑ Disconnect the CNC01 (WRC) on the Main PCB, and check short circuit on Main PCB CN 4 Pin 1 - 5.  
If the short circuit disappears, check the WRC wire, WRC.
- ❑ Disconnect the CNB01 (Ext.Out) on the Main PCB, and check short circuit on Main PCB CN 4 Pin 1 - 5.  
If the short circuit disappears, check the Ext. device or wiring.
- ❑ Disconnect the CN2 (TransmissionPCB) on the Main PCB, and check short circuit on Main PCB CN 4 Pin 1 - 5.  
If the short circuit disappears, replace the Transmission PCB.
- ❑ Disconnect the CN22 (Interconnecting wire) on the Main PCB, and check short circuit on Main PCB CN 4 Pin 1 - 5.  
If the short circuit disappears, replace the Filter PCB.
- ❑ If the short circuit appears after disconnecting actuators, replace the Main PCB.

↓**OK (No short circuit)**

#### Check Point 11 : Check short circuit of actuators (for DC5V)

- ❑ Disconnect the CN14 (SW PCB) on the Main PCB, and check short circuit on Main PCB CN 4 Pin 1 - 3.  
If the short circuit disappears, replace the SW PCB.
- ❑ Disconnect the CN18 (Receiver unit \*Option) on the Main PCB, and check short circuit on Main PCB CN 4 Pin 1 - 3.  
If the short circuit disappears, check the wire, Receiver unit.
- ❑ Disconnect the CN2 (Transmission PCB) on the Main PCB, and check short circuit on Main PCB CN 4 Pin 1 - 3.  
If the short circuit disappears, replace the Transmission PCB.
- ❑ Disconnect the CN21 (Interconnecting wire) on the Main PCB, and check short circuit on Main PCB CN 4 Pin 1 - 3.  
If the short circuit disappears, replace the Power supply PCB.
- ❑ If the short circuit appears after disconnecting actuators, replace the Main PCB.

| <b>Detective Actuators:</b><br>Indoor Unit Controller PCB Circuit<br>Indoor Unit Power supply PCB Circuit | <b>Detective details:</b><br>When the DC power input for Fan motor < W500 - W501 (W530 - W531) on the Power supply PCB > becomes lower voltage than the specified voltage. |
|---|--|

|                            |   |
|----------------------------|---|
| <b>Forecast of Cause :</b> | 1. Noise momentary open, voltage drop<br>2. Wire connection<br>3. Fan motor<br>4. Peripheral electric devices<br>5. Power supply PCB<br>6. Controller PCB |
|----------------------------|---|

Check Point 1 : Check if any outside cause such as voltage drop or noise

- ⚙ Instant voltage drop ----- Check if there is any electric equipment with a large load within the same circuit
- ⚙ Momentary power failure ---- Check contact failure or leak current in power supply circuit
- ⚙ Check if there is any equipment that causes harmonic wave near the power cable (Neon light bulb or any electronic equipment which causes harmonic wave). And check the complete insulation of grounding.  
 >>If the same symptom does not reappear after resetting the power, possibility of noise is high.

OK

Check Point 2 : Check wire connection

- ❑ Wire lose connection / damage between the CN21 on the Controller PCB and CN250 on the Power supply PCB.  
 In case of Model 72, between W530 (W531) on the Power supply PCB and Capacitor.  
 >>If there is abnormal on the wire, replace it

OK

Check Point 3 : Check rotation of Fan / wire resistance

- ❑ Rotate the applicable fan by hand when operation is off.
- ❑ Disconnect the connector from the Power supply PCB and Check resistance value of Motor connector.  
 (Refer to the service parts information 20)

OK

Check Point 4 : Check peripheral devices, Posistor, Capacitor, Diode bridge

- ❑ Check resistance value, short circuit, visible damage  
 >>If there is abnormal, replace it

OK

Check Point 5 : Replace Power supply PCB

- ❑ Change Power supply PCB

NG

Check Point 6 : Replace Controller PCB

- ❑ Change Controller PCB and set up the original address.

|-----------------------------------|---|
| <b><u>Forecast of Cause :</u></b> | 1. Error input connecting wire (When the External input Error input in use.) damage<br>2. Peripheral device Error |
|-----------------------------------|---|

|  |
|--|
| Check Point 1 : Check the wire connection of External input (Error input)  |
| <input type="checkbox"/> Check wire between the terminal "Error input signal" of DX-KIT and the peripheral device, if it is not short circuit. If the connecting wire has the short circuit, replace the wire. |

|   |
|---|
| Check Point 2 : Check the Error status of peripheral device                         |
| <input type="checkbox"/> Refer to the Maintenance manual for the peripheral device. |

\* The type of error cannot be checked at the DX-KIT control unit.

## Trouble shooting 87

### Peripheral device doesn't operate

### Forecast of Cause :

1. Power supply failure
2. Trouble on peripheral device
3. DX-Kit Electrical component defective
4. Field setting mismatch

#### General check procedure

1. Check Error code on the VRF system. (Remote controller, Service tool, etc)
2. Check LED brinks on the controller PCB of DX-KIT
3. Check Error code on the peripheral device.
4. Check non of wrong filed settings or wrong installation.

#### Check Point 1 : Power supply

##### ❑ Is not the breaker down?

Instant drop ----- Check if there is a large load electric apparatus in the same circuit.

Momentary power failure ----- Check if there is a defective contact or leak current in the power supply circuit.

Noise ----- Check if there is any equipment causing harmonic wave near electric line  
(Neon bulb or electric equipment that may cause harmonic wave).

Check the complete insulation of grounding.

↓ **OK**

#### Check Point 2 : LED indication on the controller PCB

LED Blinking

Check Error code indication on the remote controller or Service tool

↓ **LED ON**

#### Check Point 3 : Operation signal output

Short circuit

Refer to the service manual for the peripheral device and check the trouble shooting tips.

##### ❑ Check circuit on the terminal ON /OFF SIGNAL(OUTPUT)

↓ **Open circuit**

#### Check Point 4 : Relay PCB power input DC12V

OK (DC12V)

Make sure that the operation command (ON signal) is transferring from the controller to the DX-Kit controller.  
If the ON signal was OK, Replace the Relay PCB.

##### ❑ Check power input CN800 Pin1 - Pin2

↓ **NG**

Make sure that the operation command (ON signal) is transferring from the Controller to the DX-Kit controller.  
If the ON signal was OK, Replace the Main PCB.

#### Other tips

Check Field function setting, (External input signal setting)  
The Prohibit setting conditions  
The operating mode mismatch

## Trouble shooting 88

### Peripheral device FAN not operate

#### Forecast of Cause :

1. Power supply failure
2. Trouble on peripheral device
3. DX-Kit Electrical component defective
4. Field setting mismatch

#### General check procedure

1. Check Error code on the VRF system. (Remote controller, Service tool, etc)
2. Check LED brinks on the controller PCB of DX-KIT
3. Check Error code on the peripheral device.
4. Check non of wrong filed settings or wrong installation.
5. Check if FAN operation stopped by the freeze prevention or the defrosting operation.

#### Check Point 1 : Power supply

##### ❑ Is not the breaker down?

Instant drop ----- Check if there is a large load electric apparatus in the same circuit.

Momentary power failure ----- Check if there is a defective contact or leak current in the power supply circuit.

Noise ----- Check if there is any equipment causing harmonic wave near electric line  
(Neon bulb or electric equipment that may cause harmonic wave).

Check the complete insulation of grounding.

↓ **OK**

#### Check Point 2 : LED indication on the controller PCB

**LED Blinking**

Check Error code indication on the remote controller or Service tool

↓ **LED ON**

#### Check Point 3 : Operation signal output

##### ❑ Check circuit on the terminal ON /OFF SIGNAL(OUTPUT)

**Open circuit**

**Short circuit**

#### Check Point 4 : FAN SIGNAL output

**Short circuit**

Refer to the service manual for the peripheral device and check the trouble shooting tips.

##### ❑ Check circuit on the terminal FAN SIGNAL (OUTPUT)

**Open circuit**

#### Check Point 5 : Relay PCB power input DC12V

**OK (DC12V)**

Make sure that the operation command (ON signal) is transferring from the controller to the DX-Kit controller.  
If the ON signal was OK, Replace the Relay PCB.

##### ❑ Check power input CN800 Pin1 - Pin2

↓ **NG**

Make sure that the operation command (ON signal) is transferring from the Controller to the DX-Kit controller.  
If the ON signal was OK, Replace the Main PCB.

#### Other tips

Check Field function setting, (External input signal setting)  
The Prohibit setting conditions  
The operating mode mismatch

## Trouble shooting 89

### Peripheral device No Cooling/ Heating

## Forecast of Cause :

1. Temperature controlling
2. EEV controlling
3. External Factor

### General check procedure

1. Check Error code on the VRF system. (Remote controller, Service tool, etc)
2. Check LED brinks on the controller PCB of DX-KIT
3. Check Error code on the peripheral device.
4. Check none of protection function is operating on the system.  
Protection functions (For the description of protective conditions, see the service manual.)
  - Abnormal Temperature: Compressor temperature, Discharge temperature, Heat-sink temperature, IDU HEX temp.
  - Abnormal pressure: High pressure, Low pressure,
  - Abnormal on devices: EEV coil, FAN motor, Compressor Frq,

### Check Point 1: Temperature sensors

#### Sensor position / Wire connection / Temperature detection

- Measure the resistance of sensor at the terminal board, and compare the temperature (transformed with resistance value) with the actual detecting temperature by using the Service tool.

#### Gas / Liquid Sensor Characteristics (Rough value)

|                         |      |      |      |      |      |      |     |     |     |     |     |
|-------------------------|------|------|------|------|------|------|-----|-----|-----|-----|-----|
| Temperature (°F)        | 32   | 41   | 50   | 59   | 68   | 77   | 86  | 95  | 104 | 113 | 122 |
| Temperature (°C)        | 0    | 5    | 10   | 15   | 20   | 25   | 30  | 35  | 40  | 45  | 50  |
| Resistance Value (kOhm) | 33.6 | 25.2 | 20.1 | 15.8 | 12.5 | 10.0 | 8.0 | 6.5 | 5.3 | 4.3 | 3.5 |

#### Inlet / Outlet Air Sensor Characteristics (Rough value)

|                         |       |       |       |      |      |      |      |      |      |      |      |
|-------------------------|-------|-------|-------|------|------|------|------|------|------|------|------|
| Temperature (°F)        | 32    | 41    | 50    | 59   | 68   | 77   | 86   | 95   | 104  | 113  | 122  |
| Temperature (°C)        | 0     | 5     | 10    | 15   | 20   | 25   | 30   | 35   | 40   | 45   | 50   |
| Resistance Value (kOhm) | 168.6 | 129.8 | 100.9 | 79.1 | 62.5 | 49.8 | 40.0 | 32.4 | 26.3 | 21.2 | 17.8 |

If the sensor position was incorrect, install the sensor to the correct position

If the temperature detection was wrong, replace the sensor.

### Check Point 2: EEV

#### Wire connection / EEV movment

- Measure the resistance of EEV coil and measure the DC12V power input at the terminal board.  
EEV1: CN10\_Pin No.1 - Pin No.6, Pin No.1 - Pin No.4, Pin No.2 - Pin No.3, Pin No.2 - Pin No.5  
EEV2: CN11\_Pin No.1 - Pin No.6, Pin No.1 - Pin No.4, Pin No.2 - Pin No.3, Pin No.2 - Pin No.5
- Check EEV initialisation movment by the power reset of DX-Kit.
- Check refrigerant flowing by measuring the temperature of pipe inlet and pipe outlet.

| Read wire      | Resistance value (20°C) |
|----------------|-------------------------|
| White - Red    | <b>200 Ω ±10%</b>       |
| Yellow - Brown |                         |
| Orange - Red   |                         |
| Blue - Brown   |                         |

If the resistance of EEV coil was not correct, replace the EEV unit.

If the DC12V did not appear on the terminal, check DCV power supply on CN102.

No Voltage : Replace the power supply PCB,

DC12V appears: Replace the controller PCB.

If the EEV did not react after power reset, or no refrigerant flowing, replace the EEV unit.

### Check Point 3: External factor

#### Air circulation obstruction

Design mismatch (Capacity, FAN speed mismatch, Field setting (Analog signal input) etc,)

Peripheral device abnormal (See the Service manual for the peripheral device)

## Trouble shooting 90

### DX-KIT Controller No Power (LED on the Main PCB is OFF)

#### Forecast of Cause :

1. Power supply failure
2. DX-Kit Electrical component defective

#### Check Point 1 : Power supply

##### ❑ Is not the breaker down?

Instant drop ----- Check if there is a large load electric apparatus in the same circuit.

Momentary power failure ----- Check if there is a defective contact or leak current in the power supply circuit.

Noise ----- Check if there is any equipment causing harmonic wave near electric line  
(Neon bulb or electric equipment that may cause harmonic wave).

Check the complete insulation of grounding.

OK

#### Check Point 2 : FUSE F101 on the Power supply PCB

OPEN

Before replacing the burnt FUSE,  
make sure that the terminal between  
L - N - E are not short-circuit.

OK

#### Check Point 3 : Output voltage on the power supply PCB

NG

Replace the Power supply PCB

##### ❑ Disconnect the CN 102 on the Power supply PCB.

Check voltage CN102 output voltage

Pin No.1 - Pin No.6 : DC12V

Pin No.2 - Pin No.6 : DC 5V

OK

#### Check Point 4 : Output voltage on the main PCB

NG

Replace the Main PCB

##### ❑ Disconnect the CN 801, and the power input connectors for actuators (EEV, Sensor, Relay PCB.)

Check voltage CN801 output voltage

Pin No.1 - Pin No.2 : DC12V

OK

#### Check Point 5 : Check the condition of short-circuit

NG

Replace the actuators which has the  
Short-circuit conditions

##### ❑ Disconnect the power input connectors for actuators (EEV, Sensor, Relay PCB.) And check the short circuit of each actuators.

## 4-3 SERVICE INFORMATION

### SERVICE INFORMATION

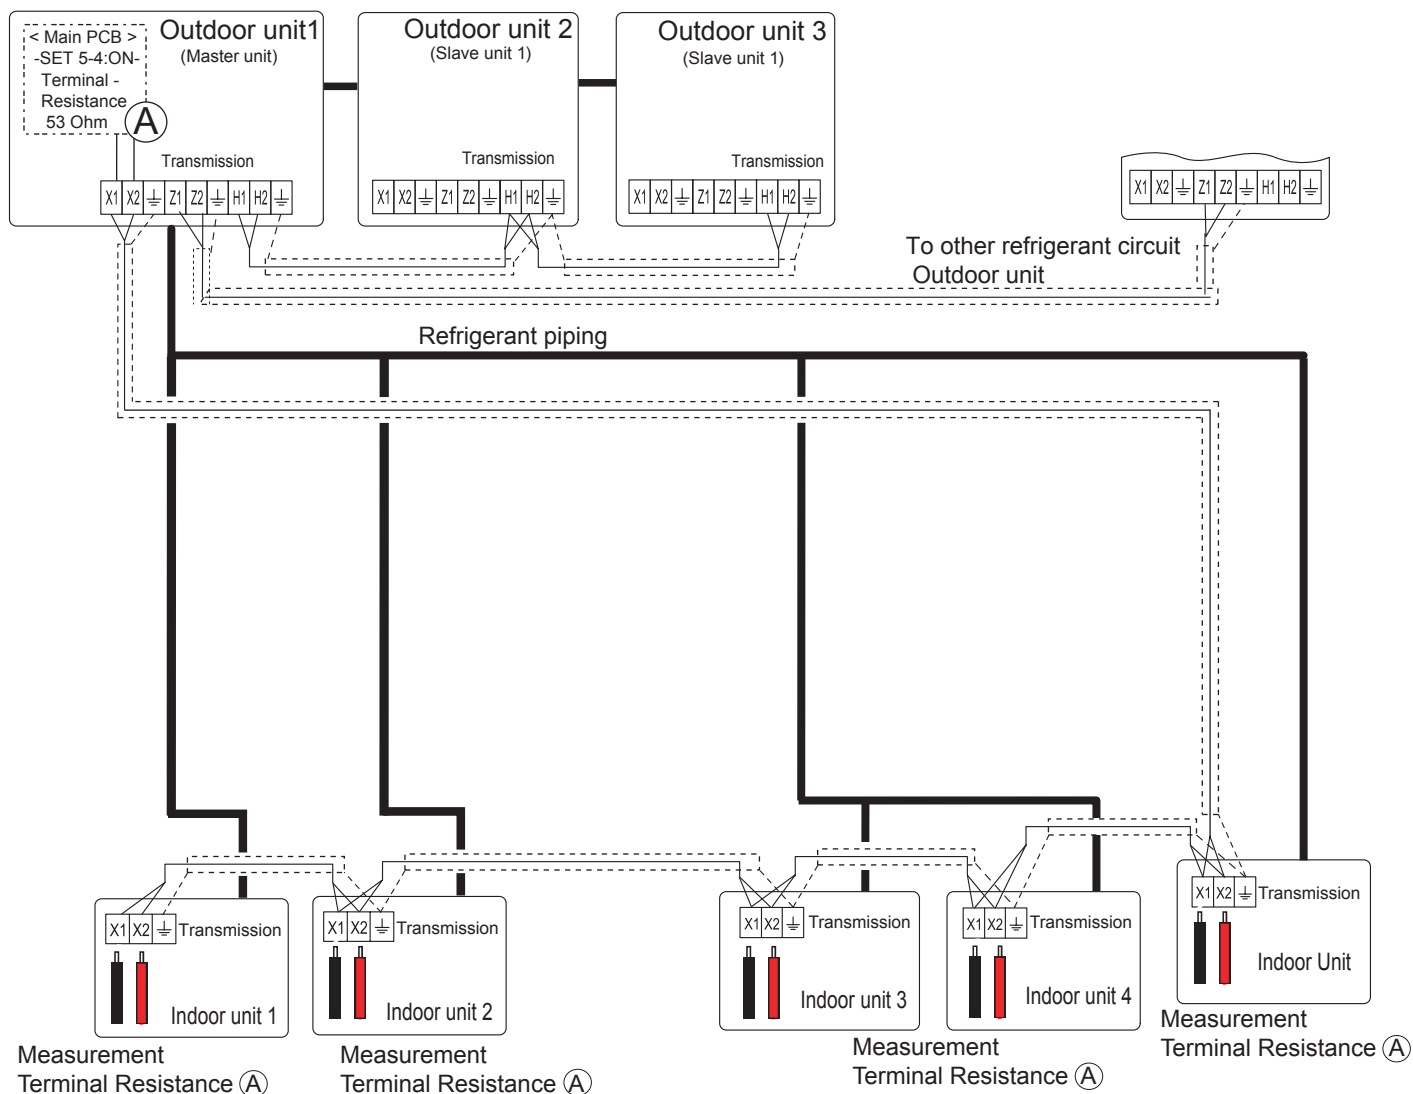

#### Network communication Abnormal

#### - Basic trouble shooting procedure -

1. Check Error code in one network segment separately, and check the Error code of (OU, IU, RC, ST)  
< If the system has more than 2 Network segments, disconnect the other Network segment.>
2. Connect Service tool to the Outdoor unit, and try out **"Address checker"** Function by the Service tool.  
< Check missing indoor unit or outdoor unit by using Address checker function of Service tool>
3. Check terminal resistance value  $53 \text{ Ohm} \pm 5\%$  + Line Resistance on the terminal board one by one.  
< Terminal Resistance is located on the Outdoor unit PCB(activated SET 5-4 ON) >  
\*Refer to the wiring diagram of Network cable

#### Example

Terminal Resistance (A) is located on the controller PCB of Outdoor unit as the Network for Indoor unit.

## 4-4 SERVICE INFORMATION

### SERVICE INFORMATION

#### Backup Operation

##### Details :

- Backup operation is the operating method of replacing compressor while the system is running. Compressor can be replaced without stopping the system.
- In backup operation, cooling and heating capacity is decreased by the capacity of the separated outdoor unit.
- The work procedure is as follows.

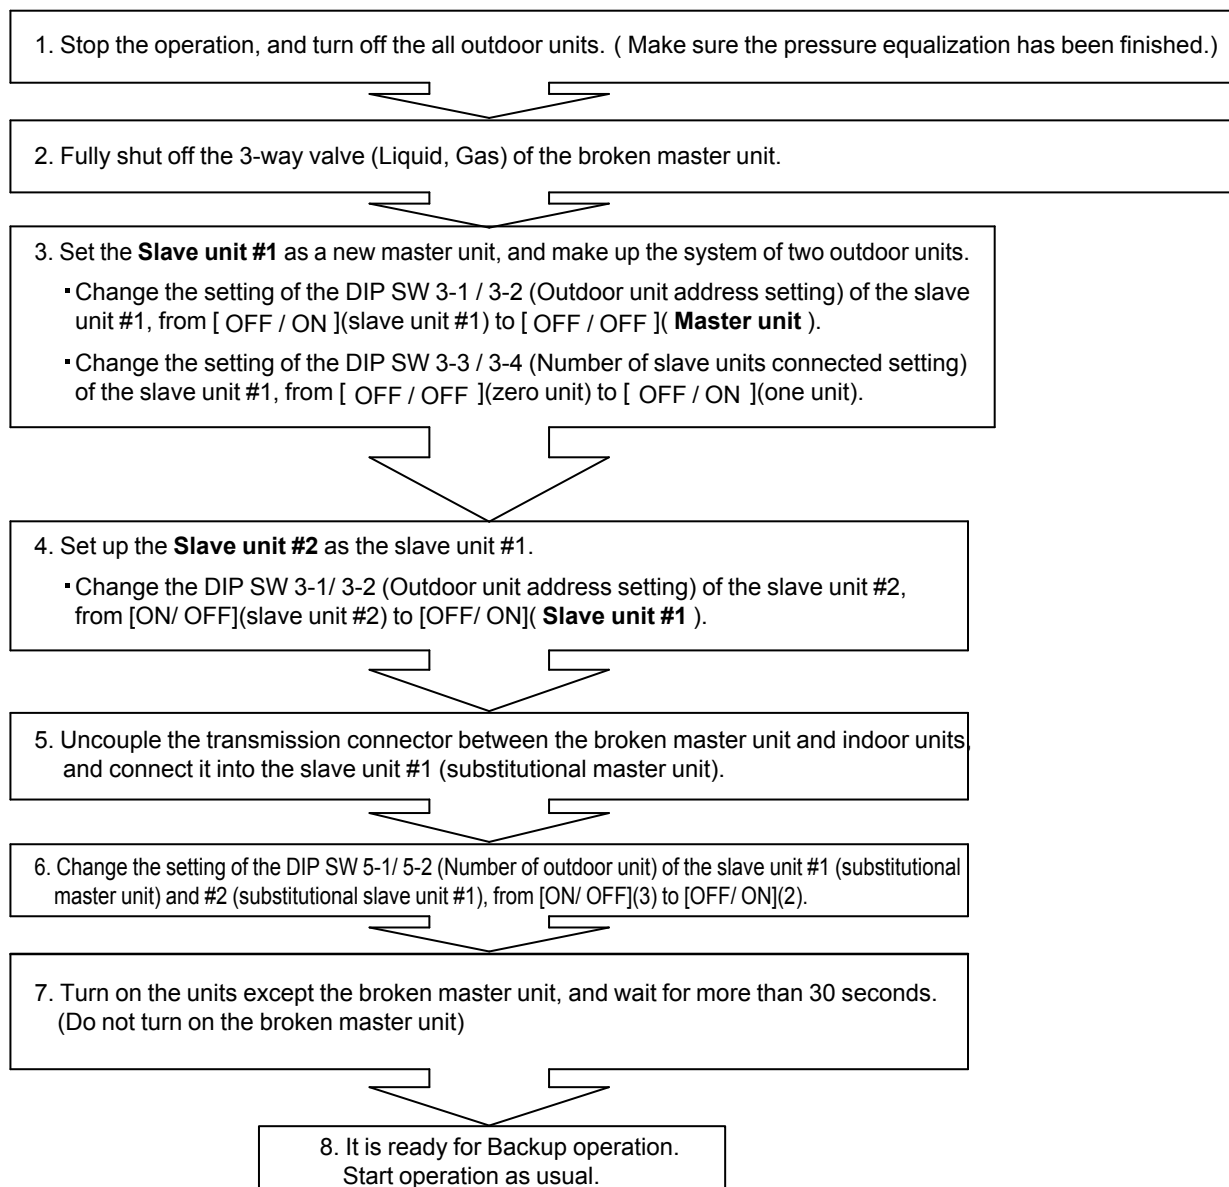

### 4-4-1 Backup operation

#### 1. Method of backup operation

##### 1-1. Backup operation when compressor of the master unit is defective.

##### [Procedure]

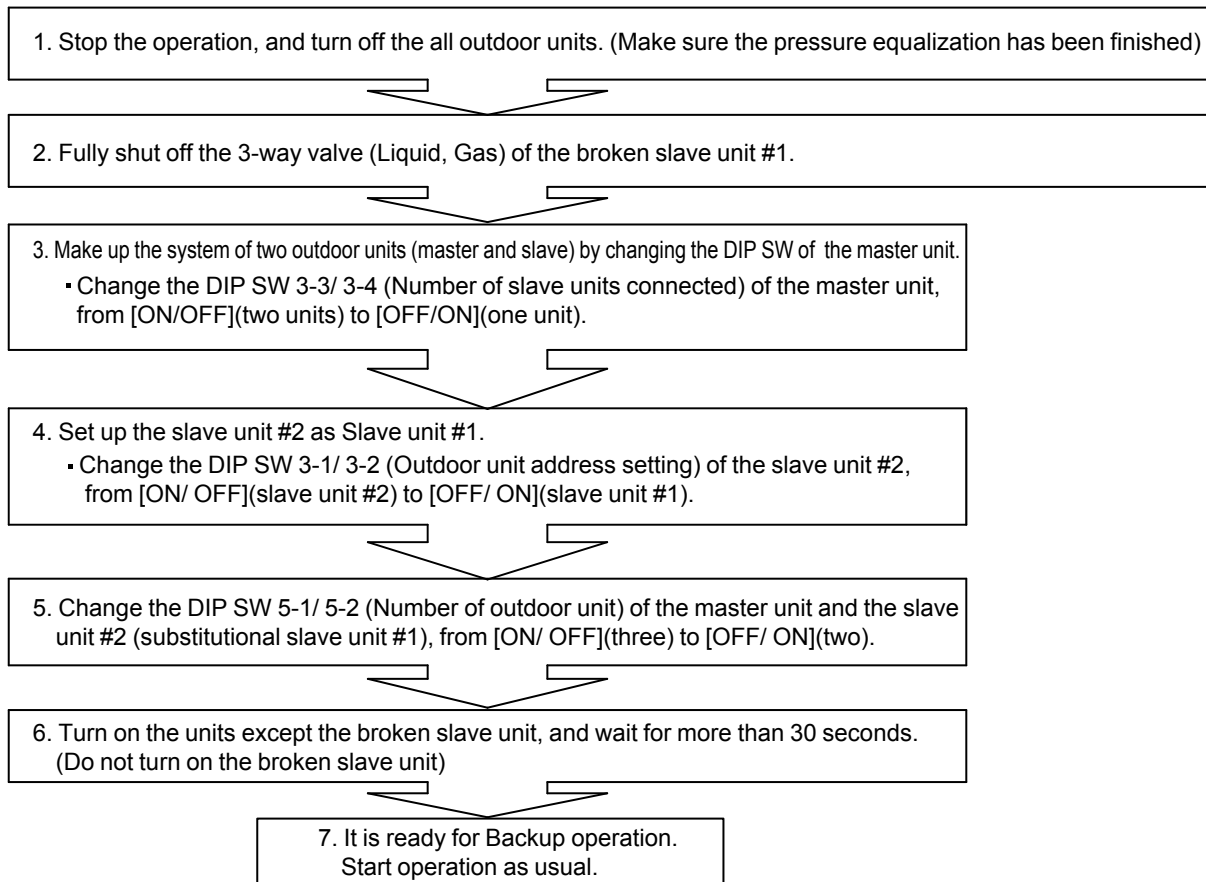

(Example: Three outdoor units are connected.)

## 1-2. Backup operation when compressor of the slave unit #1 is broken.

### [Procedure]

(Example: Three outdoor units are connected. the slave unit #1 is broken.)

## 4-4-2 Work procedure after the backup operation

### 1. Refrigerant shortage at the backup operation

When excessive refrigerant accumulates in the defective outdoor unit during the backup operation, it becomes capacity shortage by refrigerant shortage.

The meaning of the sign

- LPS : Low pressure sensor detection value
- EEV1 : Expansion valve #1
- EEV2 : Expansion valve #2
- TH2 : Outdoor temperature sensor detection value
- TH3 : Suction temperature sensor detection value
- TH7 : Heat -Ex.1 gas temparture sensor detection value
- TH8 : Heat -Ex.2 gas temparture sensor detection value
- TH9 : Heat -Ex.1 liquid temparture sensor detection value
- TH10 : Heat -Ex.2 liquid temparture sensor detection value

### <How to judge, when refrigerant is deficient>

Refrigerant shortage is judged by the information from "Service tool" during backup operation.  
The outdoor unit shall enter the Cooling Main mode or Heating Main mode.

#### 1. On Cooling operation

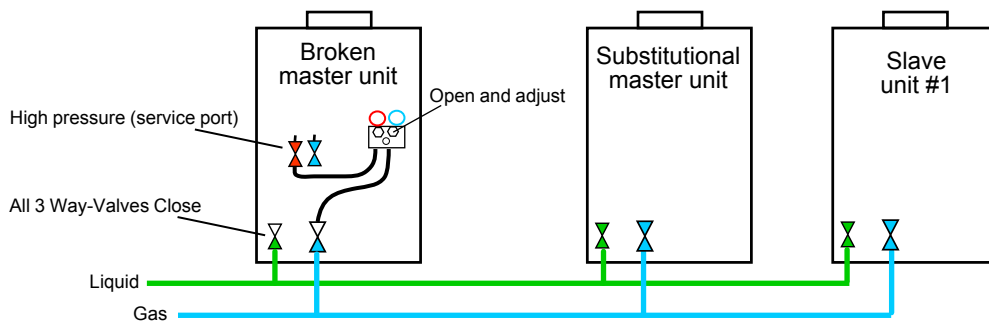

- ① It often creates "Low pressure protection stop".  
>>> When LPS < 14.5psi(0.1MPa) for 10 minutes or When LPS < 7.25psi(0.05Mpa)  
If one of this condition happens 5 times within 180 minutes, the system stops permanently.
- ② Running indoor unit's EEV is fully open condition.  
>>> It displays corresponding indoor unit's EEV on the chart at the bottom of the monitor.  
If there is no sign of closing the EEV from fully opened condition.

#### 2. On Heating operation

- ① It often creates "Low pressure protection stop".  
>>> When LPS < 14.5psi(0.1MPa) for 10 minutes or When LPS < 7.25psi(0.05Mpa)  
If one of this condition happens 5 times within 180 minutes, the system stops permanently.
- ② EEV1 opens at 480 pulse. (fully open)  
EEV2 opens at 480 pulse. (fully open)
- ③ Suction superheat is too high, when the condition is following  
TH9 < Th7, TH10 < TH8, TH2  $\neq$  TH3  
Note: The suctin SH can be larger temprary at the start up, oil recovery, defrosting.  
Even if the lowpressure protection does not occur, keep watching the operating condition for a while.

<How to respond, when refrigerant is deficient>

- ① Reuse the refrigerant of the broken master unit.

Connect the high pressure service port of the broken master unit and the low pressure pipe of the broken master unit by pressure gauge.

>>> Refrigerant release from the heat exchanger of the broken master unit.  
(Refrigerant is removed until refrigerant shortage is resolved)

When new refrigerant is added to the operating system, check the weight of additional refrigerant, and adjust the total refrigerant amount after repairing.

- ② Recover the remaining refrigerant in the broken master unit from the service port(s).

## 2. Refrigerant charging after the compressor replacement.

- ① If the amount of recovered refrigerant is available that was pulled out of outdoor unit which compressor was replaced.  
(When the refrigerant is recovered by refrigerant recovery machine, and its weight is measured.)

>>> Perform vacuuming of repaired outdoor unit thoroughly, and add the refrigerant with the recovered amount.

- ② If the amount of recovered refrigerant from outdoor unit that compressor was replaced is not sure.  
(When the refrigerant leakage was the case.)

>>> Once recover all units' refrigerant, and recharge the calculated amount of refrigerant  
(Original amount and additional amount) again after vacuuming.

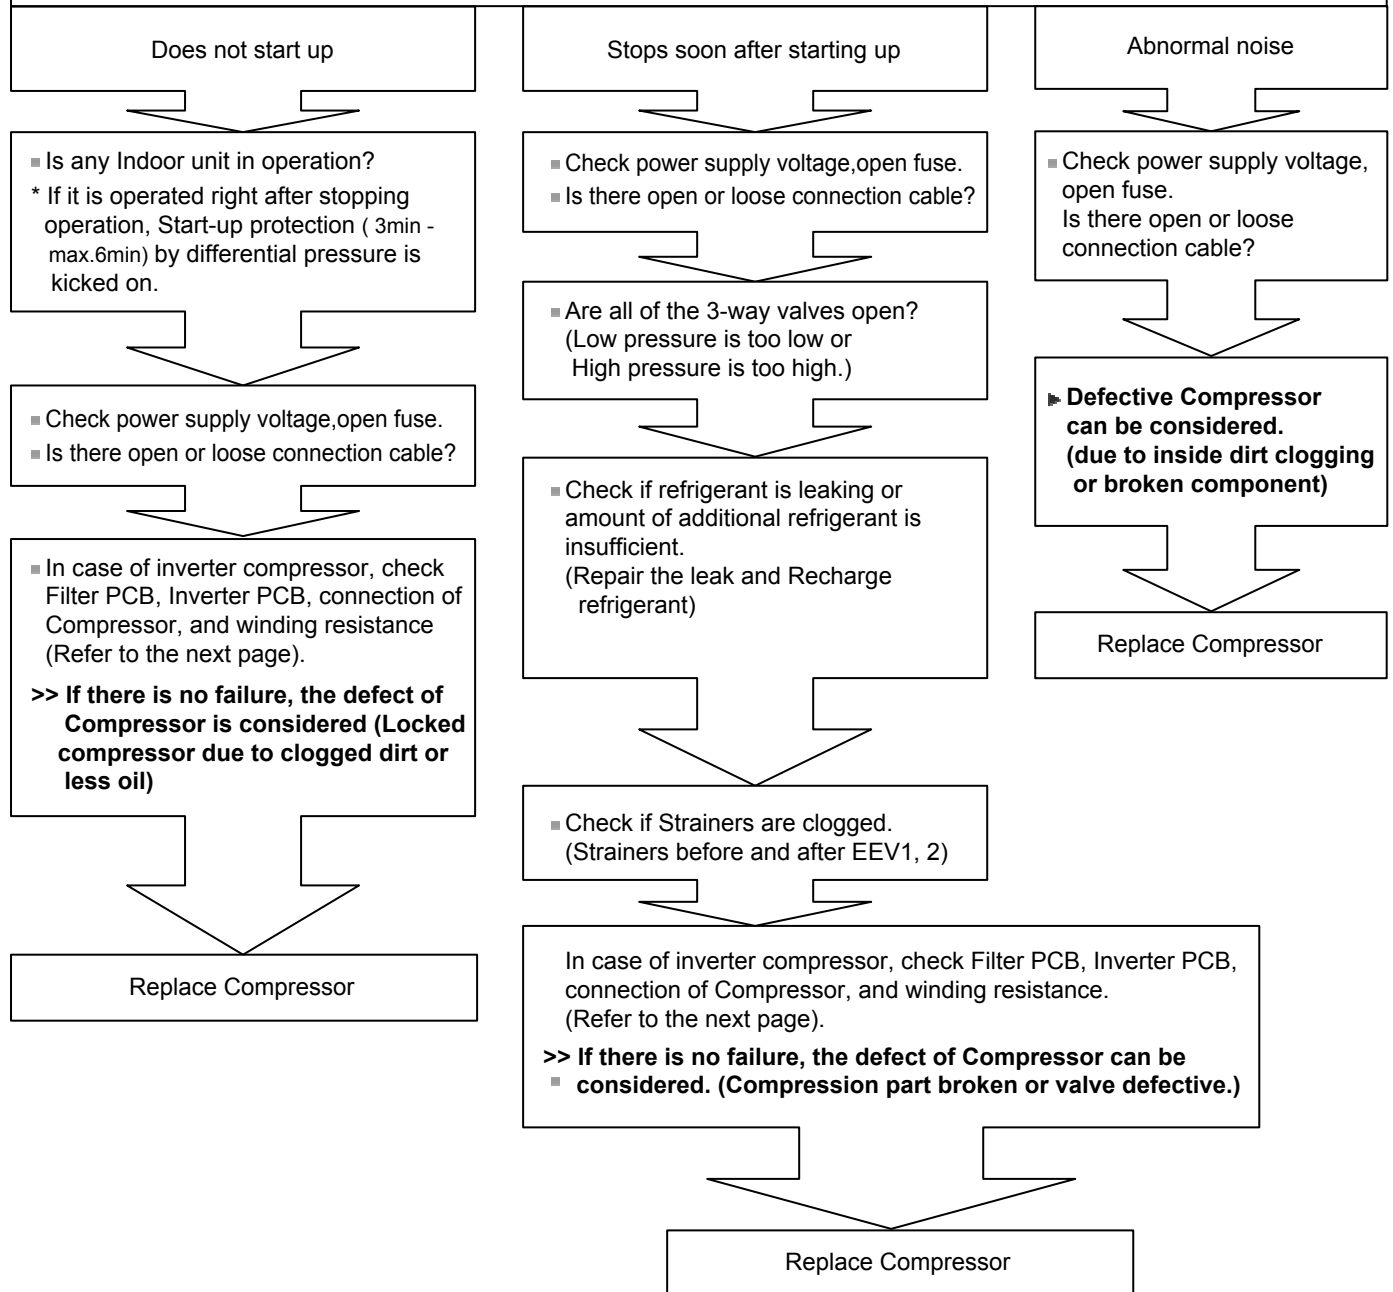

Note: To use the recovered refrigerant is not recommended in case of refrigerant leakage.  
Always charge fresh refrigerant with correct amount for the system after repairing.

## 4-5 SERVICE PARTS INFORMATION

### SERVICE PARTS INFORMATION 1

#### Compressor

Diagnosis method of Compressor (If Outdoor Unit 7 segment LED displays Error, refer to Trouble shooting )

#### Note

If it is suspected of lack of oil, we recommend also replacing OIL RETURN VALVE A ASSY(P/N 9378745056) together with Compressor.

## SERVICE PARTS INFORMATION 2

### Inverter Compressor

#### Check Point 1 : Check Connection

- ❑ Check terminal connection of Compressor (loose or incorrect wiring)
- ❑ Check connection of magnet relay (Loose or incorrect wiring)

#### Check Point 2 : Check Winding Resistance

- ❑ Check winding resistance of each terminal
- ▶ **If the resistance value is 0Ω or infinite, replace Compressor.**

#### Attention!!

If Check 1, 2 are normal, make sure the following points.

- (1) Check AC voltage among each terminals from filter PCB(INV) to Diode Bridge.  
(AC208 - 230V , voltage among L1, L2 and L3).

▶ **If it does not appear, check the power supply terminal.**

- (2) Check Voltage from Main PCB to Inverter PCB.  
(DC16.0 - 20.0V between terminals of CN126 (1-2) connector of Main PCB).

▶ **If it does not appear, replace Main PCB.**

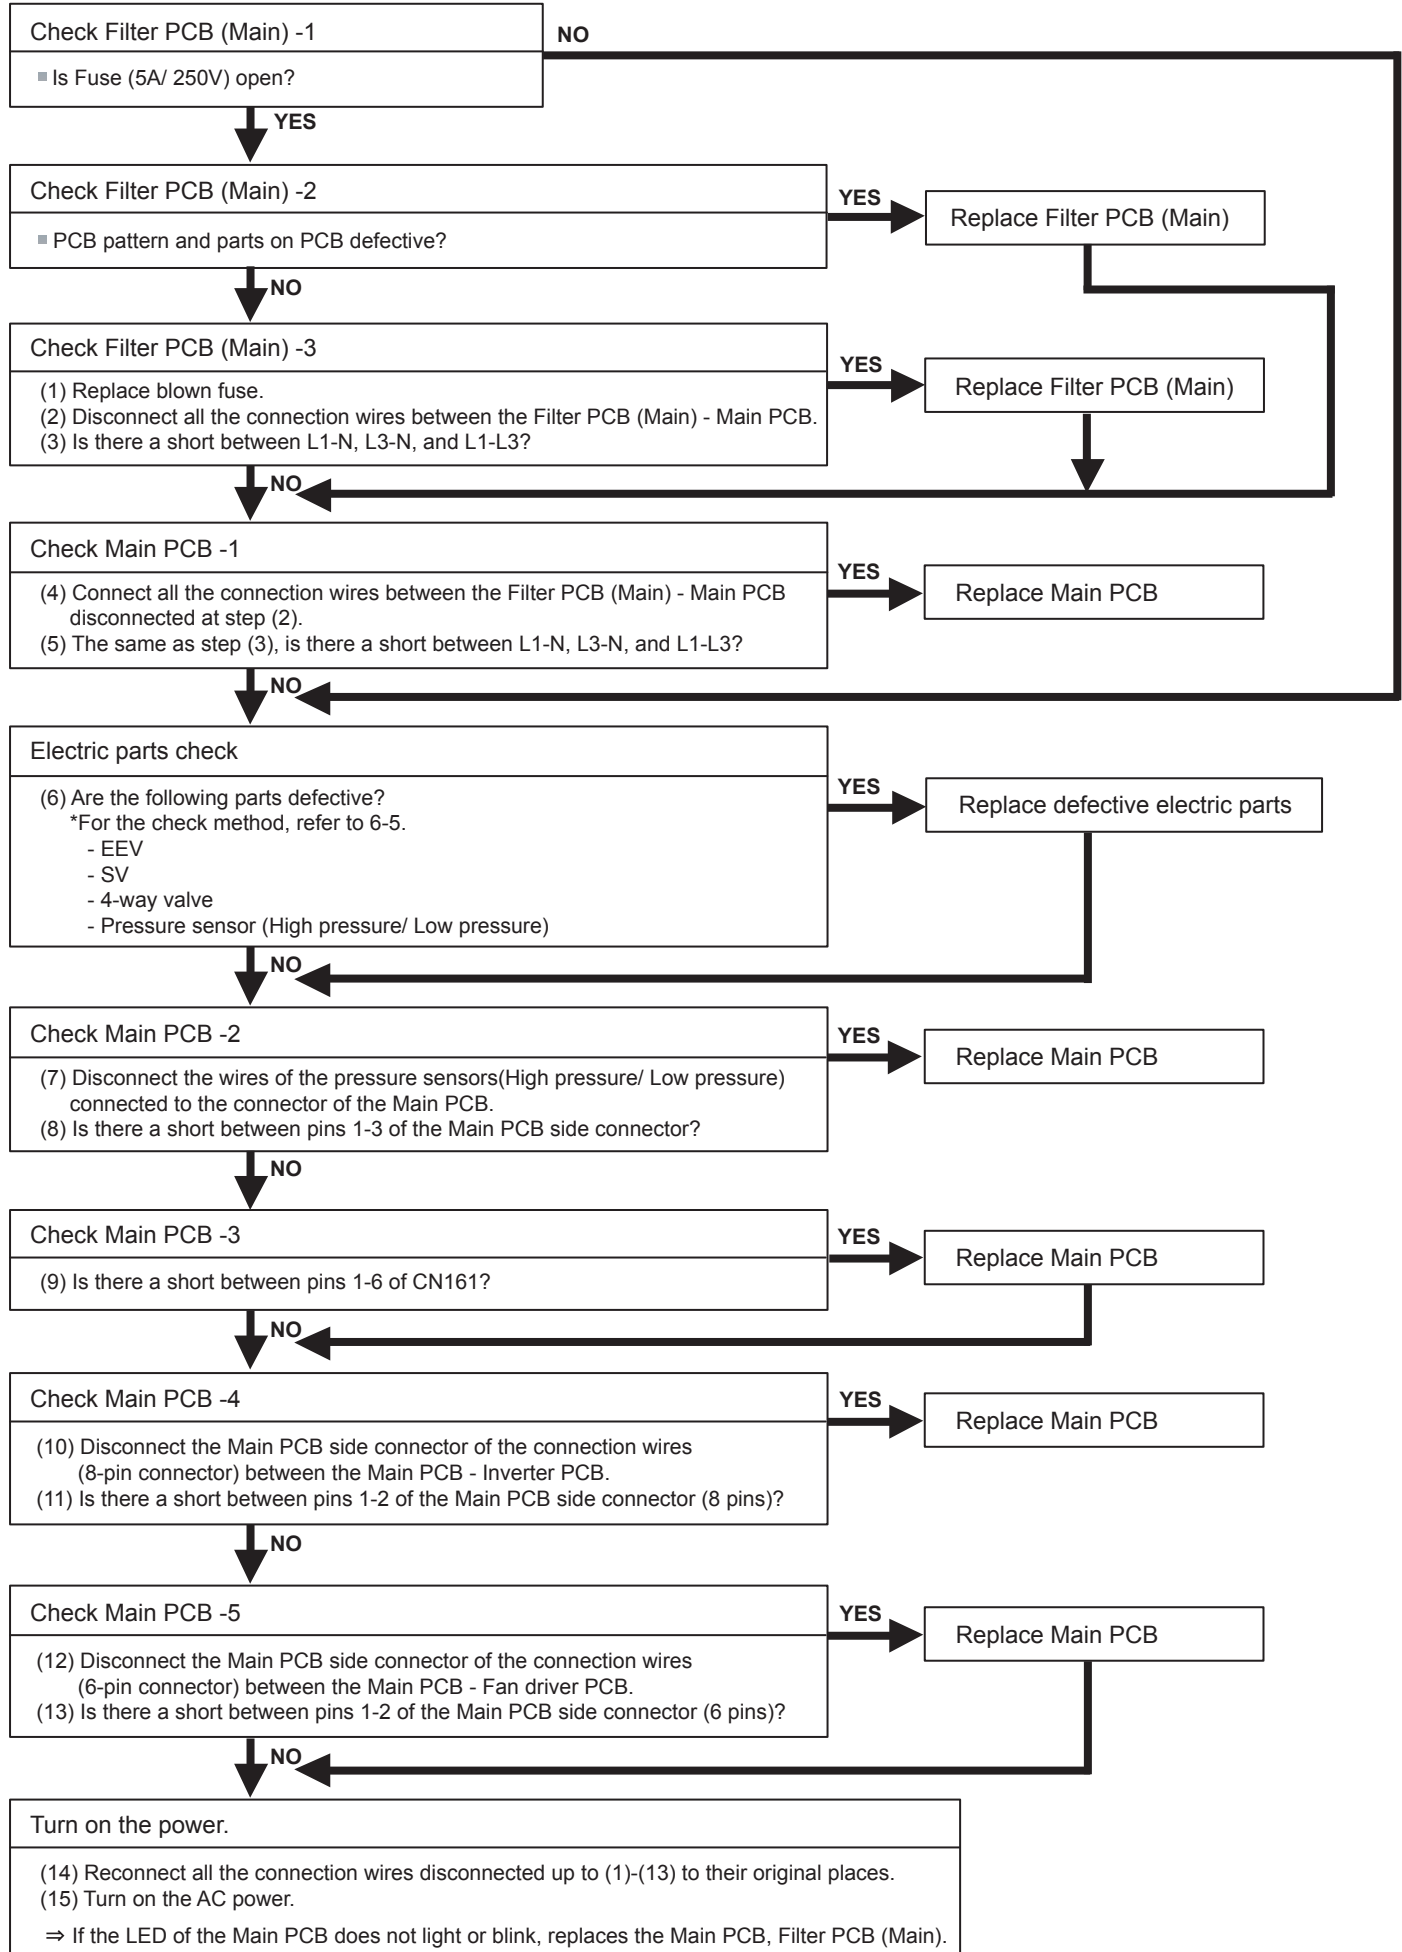

- ◆ **If both of above voltages appear, it is considered to be Inverter PCB circuit failure. Replace Inverter PCB and check operation.**

### SERVICE PARTS INFORMATION 3

#### Main PCB

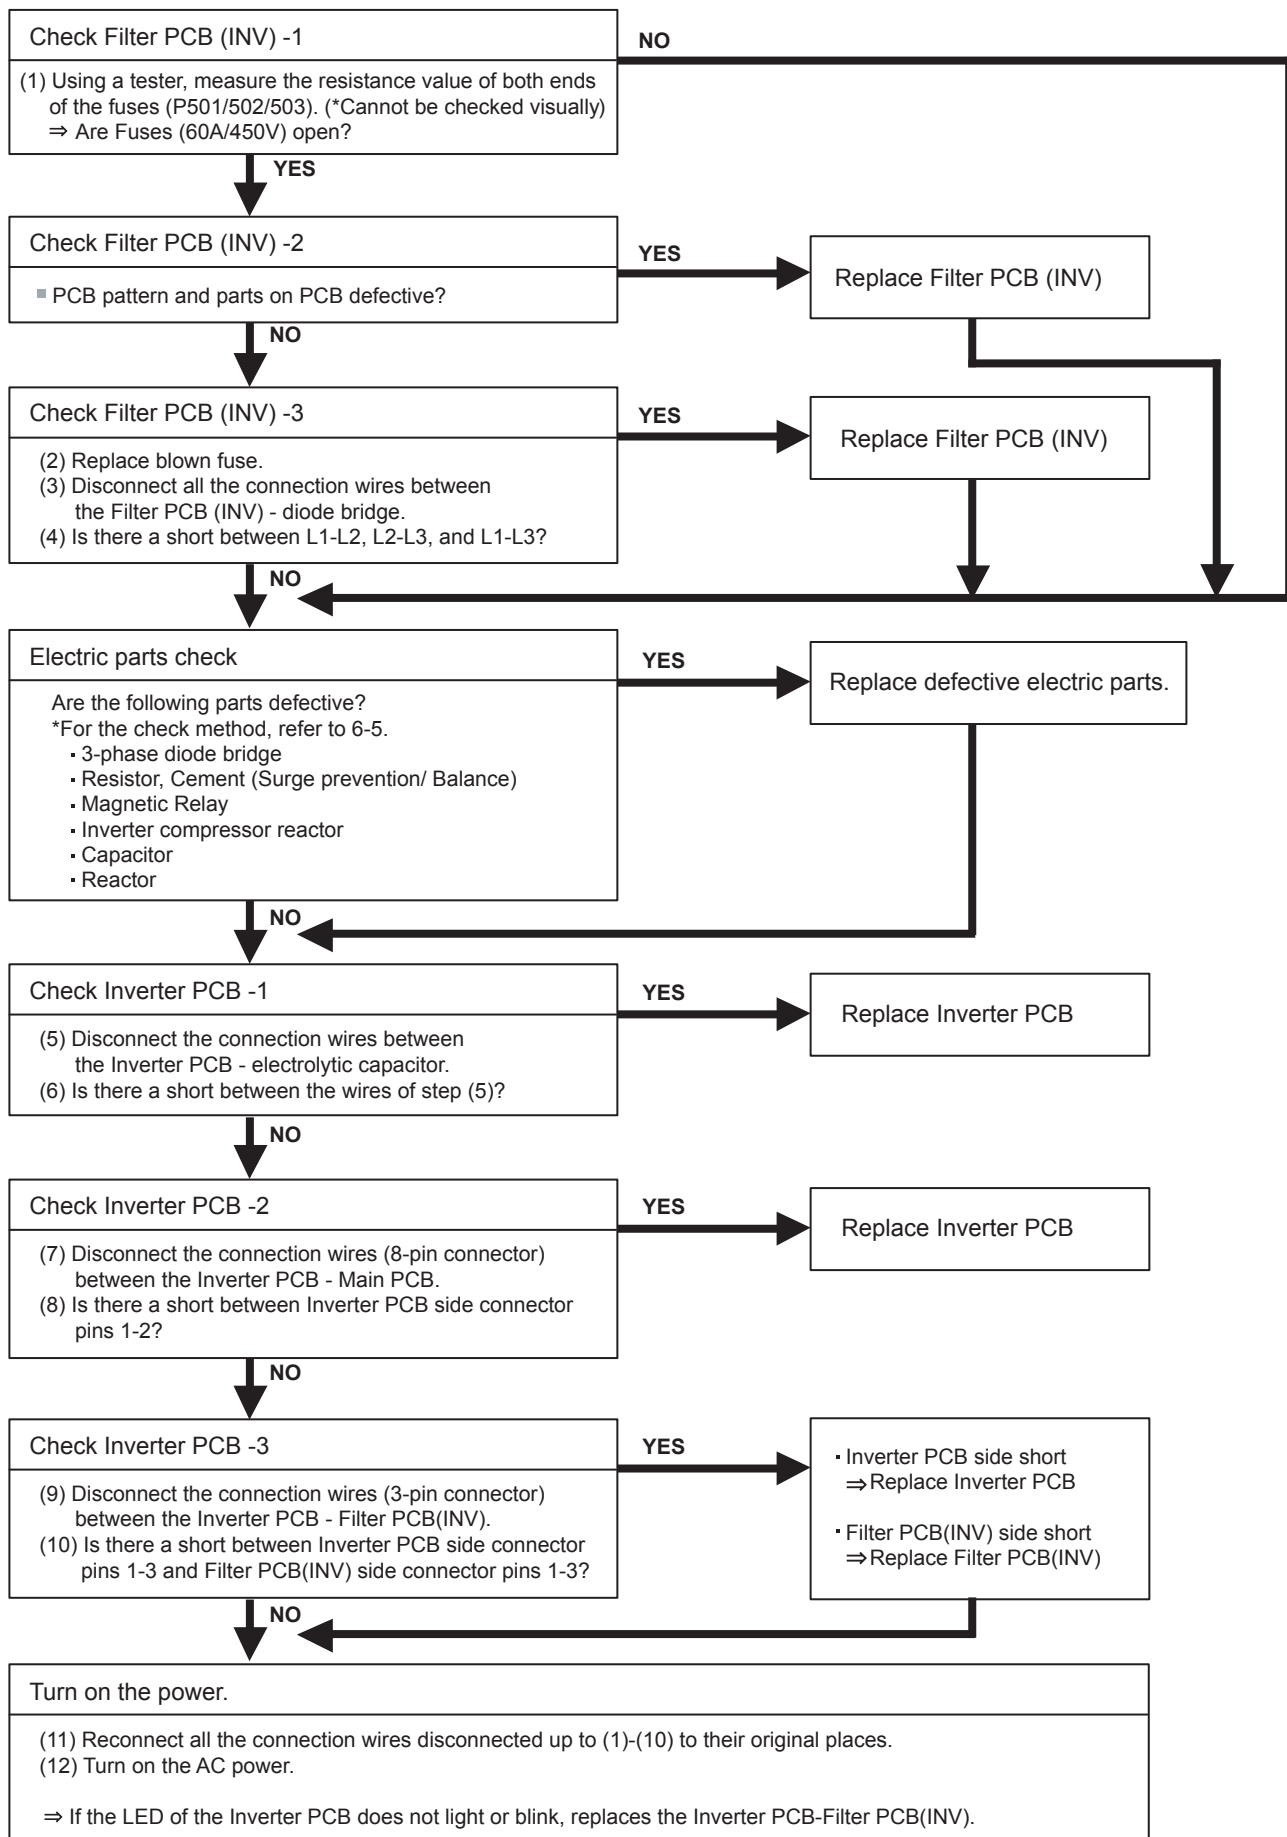

#### Filter PCB (Main)

## SERVICE PARTS INFORMATION 4

### Inverter PCB Filter PCB (INV)

## **SERVICE PARTS INFORMATION 5**

### **Fan Driver PCB**

## SERVICE PARTS INFORMATION 6

### Filter PCB(INV)

#### Check Point 1

- Measure the resistance of Filter PCB(INV) by following procedure.
  1. Turn OFF the Outdoor unit(s) power supply
  2. Disconnect the connection wires between the Filter PCB(INV) - Inverter PCB.
  3. Measure the resistance value

Good : 300 Ohm  $\pm$  20% (240 ~ 360 Ohm)

Filter PCB(INV) [K11CE-1100HUE-FL0]

## SERVICE PARTS INFORMATION 7

### IPM

(Mounted on Inverter PCB)

#### Check Point 1

- ① Disconnect the connection wires between the Inverter PCB - electrolytic capacitor and Inverter PCB - Inverter Compressor.

- ② Set the tester to the "Resistance" mode, and measure the resistance between the following terminals.

Red wire (P) - screw terminals U / V / W

White wire (N) - screw terminals U / V / W

- ③ Judge the result of ② as follows:

|                                      |             |
|--------------------------------------|-------------|
| All 6 points several MΩ or greater   | : Normal    |
| 1 or more points several kΩ to short | : Defective |

Inverter PCB

#### Check Point 2

- ④ Set the tester to the "Diode" mode, and measure the voltage value between the following terminals.

| Tester +side<br>(red) | Tester - side<br>(black) | Tester display<br>[V] |
|-----------------------|--------------------------|-----------------------|
| Terminal U            | Red wire<br>(P)          |                       |
| Terminal V            |                          |                       |
| Terminal W            |                          |                       |
| White wire<br>(N)     | Terminal U               |                       |
|                       | Terminal V               |                       |
|                       | Terminal W               |                       |

- ⑤ Judge the result of ④ as follows:

|  |             |
|--|-------------|
| All 6 points several 0.3V to 0.7V        | : Normal    |
| 1 or more points under 0.1V or over load | : Defective |

## SERVICE PARTS INFORMATION 8

### 3-Phase Diode Bridge

#### Check Point 1 : Appearance check

- ☐ No fissures, breaks, damage, etc. at body and terminal section?
- ☐ Is the rear of the body coated with silicone grease?
- ☐ Are there no abnormalities at threaded parts (stripped threads, deformation, damage, etc.) ?

#### Check Point 2 : Electric check

- ① In the 3-phase diode bridge single part state, set the tester to the "Diode" mode, and measure the voltage value between the following terminals.

| Tester + side<br>(red) | Tester - side<br>(black) |
|------------------------|--------------------------|
| Pin 1                  | Pin 4                    |
| Pin 2                  |                          |
| Pin 3                  |                          |
| Pin 5                  | Pin 1                    |
|                        | Pin 2                    |
|                        | Pin 3                    |

- ② Judge the result of ① as follows:

|  |           |
|--|-----------|
| All 6 points several 0.3V to 0.7V        | Normal    |
| 1 or more points under 0.1V or over load | Defective |

- ③ Set the tester to the "Diode" mode, and measure the voltage value between the following terminals.

| Tester + side<br>(red) | Tester - side<br>(black) |
|------------------------|--------------------------|
| Pin 4                  | Pin 1                    |
|                        | Pin 2                    |
|                        | Pin 3                    |
| Pin 1                  | Pin 5                    |
| Pin 2                  |                          |
| Pin 3                  |                          |

- ④ Judge the result of ③ as follows:

|                                   |           |
|-----------------------------------|-----------|
| All 6 points over load            | Normal    |
| 1 or more points except over load | Defective |

## SERVICE PARTS INFORMATION 9

### Reactor

#### Check Point 1 : Appearance check

- No fissures, breaks, damage, etc. at the body and winding section, terminals section?

#### Check Point 2 : Electric check

① Set the tester to the "Resistance" mode, and check for open/short between both ends of the reactor wire (or connector).

② Judge the result of ① as follows:

|       |                   |
|-------|-------------------|
| Short | : Normal          |
| Open  | : Abnormal (open) |

## SERVICE PARTS INFORMATION 10

### Resistor, Cement

#### Check Point 1 : Appearance check

- ☐ No fissures, breaks, damage, etc. at the body and terminals section?

#### Check Point 2 : Electric check

##### 1. Surge prevention resistor (connected to magnetic contactor)

- ① Set the tester to the "Resistance" mode, and measure the resistance value between the terminals.  
(No polarity)

- ② Judge the result of ① as follows:

|                       |                         |
|-----------------------|-------------------------|
| $5.6\ \Omega \pm 5\%$ | Normal                  |
| Other than the above  | Deteriorated, defective |

##### 2. Discharge resistor (connected to electrolytic capacitor)

- ① Set the tester to the "Resistance" mode, and measure the resistance value between the terminals. (No polarity)

- ② Judge the result of ① as follows:

|                              |                         |
|------------------------------|-------------------------|
| $33\ \text{k}\Omega \pm 5\%$ | Normal                  |
| Other than the above         | Deteriorated, defective |

## SERVICE PARTS INFORMATION 11

### Terminal

#### Check Point 1 : Appearance check

- ☐ No fissures, breaks, damage, etc. at the body and terminals section?
- ☐ Not clogged with foreign matter?
- ☐ Are there no abnormalities at threaded parts (Stripped threads, deformation, damage, etc.) ?

#### Check Point 2 : Electric check

- ☐ No short between adjacent terminals?
- ☐ Conducts before and after same terminal?

## SERVICE PARTS INFORMATION 12

### Magnetic Relay

#### Check Point 1 : Appearance check

- ☐ No fissures, breaks, damage, etc. at the body and terminals section?
- ☐ Are there no abnormalities at threaded parts (Stripped threads, deformation, damage, etc.) ?

#### Check Point 2 : Electric check

① Set the tester to the "Resistance" mode, and check for open/short between the following terminals. (No polarity)

- Between R to U
- Between S to V
- Between T to W

② Judge the result of ① as follows:

|       |                             |
|-------|-----------------------------|
| Open  | : Normal                    |
| Short | : Abnormal (contacts fused) |

## SERVICE PARTS INFORMATION 13

### Indoor Unit Electronic Expansion Valve (EEV)

#### Check Point 1 : Check Connections

❑ Check Connectors (Loose connector or open cable.)

##### Duct, Cassette, Wall mount

##### Floor/ Ceiling, Ceiling, Small Wall mount

#### Check Point 2 : Check Coil of EEV

❑ Remove connector, check each winding resistance of Coil.

| Read wire      | Resistance value 68°F(20°C) |
|----------------|-----------------------------|
| White - Red    | 200 ± 10% Ω                 |
| Yellow - Brown |                             |
| Orange - Red   |                             |
| Blue - Brown   |                             |

► If Resistance value is abnormal, replace EEV.

#### Check Point 3 : Check Noise at start up

Turn on Power and check operation noise.

>> If an abnormal noise does not show, replace Controller PCB.

#### Check Point 4 : Check Voltage from Controller PCB

❑ Remove Connector and check Voltage (DC12V).

>> If it does not appear, replace Controller PCB.

#### Check Point 5 : Check Opening and Closing Operation of Valve

When Valve is closed, it has a temp. difference between Inlet and Outlet.

##### CLOSE Example : Hot Gas

If it is open, it has no temp. difference between Inlet and Outlet.

##### OPEN Example : Hot Gas

#### Check Point 6 : Check Strainer

Strainer normally does not have temperature difference between inlet and outlet as shown in (1), but if there is a difference as shown in (2), there is a possibility of inside clogged. In this case, replace Strainer.

## SERVICE PARTS INFORMATION 14

### Outdoor Unit Electronic Expansion Valve (EEV1)

#### Check Point 1 : Check Connections

- ❑ Check connection of connector (CN116)  
(Loose connector or open cable)

#### Check Point 2 : Check Coil of EEV1

- ❑ Remove connector, check each winding resistance of Coil.

| Read wire    | Resistance value 68°F(20°C)   |
|--------------|---|
| White - Red  | $46 \pm 4 \% \Omega$  |
| Yellow - Red |   |
| Orange - Red |   |
| Blue - Red   |   |

▶ **If Resistance value is abnormal, replace EEV1.**

#### Check Point 3 : Check Noise at start up

- ❑ Turn on Power and check operation noise.  
**>> If an abnormal noise does not show, replace Controller PCB.**

#### Check Point 4 : Check Voltage from Controller PCB

- ❑ Remove Connector and check Voltage (DC12V).  
**>> If it does not appear, replace Controller PCB.**

#### Check Point 5 : Check Opening and Closing Operation of Valve

Note : Check the EEV1 in the state of 4-way1 valve is ON.

When EEV1 is closed,  
it has no temp. difference between Inlet and Outlet.

If it is open, it has a temp. difference between Inlet and Outlet.  
Outlet temp. is near Low-pressure saturated temp.

In the following cases, even if EEV1 is closed, there may be a difference in temp.

- On comp. start-up
- Just after switching the 4-way valve1
- Just after switching the EEV1 (Open --> Close)

Note

If valve opening is 12~51pls,  
the check of temp. cannot be performed.  
Check temp. at the other valve opening.

#### Check Point 6 : Check Strainer

Strainer normally does not have temperature difference between inlet and outlet as shown in (1), but if there is a difference as shown in (2), there is a possibility of inside clogged. In this case, replace Strainer.

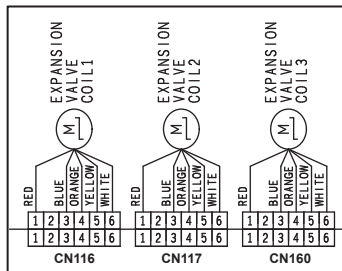

## SERVICE PARTS INFORMATION 15

### Outdoor Unit Electronic Expansion Valve (EEV2)

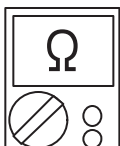

#### Check Point 1 : Check Connections

- ❑ Check connection of connector (CN117)  
(Loose connector or open cable)

#### Check Point 2 : Check Coil of EEV2

- ❑ Remove connector, check each winding resistance of Coil.

| Read wire    | Resistance value 68°F(20°C)   |
|--------------|---|
| White - Red  | $46 \pm 4 \% \Omega$  |
| Yellow - Red |   |
| Orange - Red |   |
| Blue - Red   |   |

► **If Resistance value is abnormal, replace EEV2.**

#### Check Point 3 : Check Noise at start up

- ❑ Turn on Power and check operation noise.  
**>> If an abnormal noise does not show, replace Controller PCB.**

#### Check Point 4 : Check Voltage from Controller PCB

- ❑ Remove Connector and check Voltage (DC12V).  
**>> If it does not appear, replace Controller PCB.**

#### Check Point 5 : Check Opening and Closing Operation of Valve

Note : Check the EEV2 in the state of 4-way valve2 is ON.

When EEV2 is closed,  
it has no temp. difference between Inlet and Outlet.

In the following cases, even if EEV2 is closed, there may be a difference in temp.

- On comp. start-up
- Just after switching the 4-way valve2
- Just after switching the EEV2 (Open --> Close)

If it is open, it has a temp. difference between Inlet and Outlet.  
Outlet temp. is near Low-pressure saturated temp.

Note

If valve opening is 12~51pls,  
the check of temp. cannot be performed.  
Check temp. at the other valve opening.

#### Check Point 6 : Check Strainer

Strainer normally does not have temperature difference between inlet and outlet as shown in (1), but if there is a difference as shown in (2), there is a possibility of inside clogged. In this case, replace Strainer.

## SERVICE PARTS INFORMATION 16

### Outdoor Unit Electronic Expansion Valve (EEV3)

#### Check Point 1 : Check Connections

- ❑ Check connection of connector (CN160)  
(Loose connector or open cable)

#### Check Point 2 : Check Coil of EEV3

- ❑ Remove connector, check each winding resistance of Coil.

| Read wire    | Resistance value 68°F(20°C)   |
|--------------|---|
| White - Red  | $46 \pm 4 \% \Omega$  |
| Yellow - Red |   |
| Orange - Red |   |
| Blue - Red   |   |

► **If Resistance value is abnormal, replace EEV3.**

#### Check Point 3 : Check Noise at start up

- ❑ Turn on Power and check operation noise.  
**>> If an abnormal noise does not show, replace Controller PCB.**

#### Check Point 4 : Check Voltage from Controller PCB

- ❑ Remove Connector and check Voltage (DC12V).  
**>> If it does not appear, replace Controller PCB.**

#### Check Point 5 : Check Opening and Closing Operation of Valve

When EEV3 is closed,  
it has no temp. difference between Inlet and Outlet.

If it is open, it has a temp. difference between Inlet and Outlet.  
Outlet temp. is near Low-pressure saturated temp.

In the following cases, even if EEV3 is closed, there may be a difference in temp.

- On comp. start-up
- Just after switching the EEV3 (Open -> Close)

Note

If valve opening is 12~51pls,  
the check of temp. cannot be performed.  
Check temp. at the other valve opening.

#### Check Point 6 : Check Strainer

Strainer normally does not have temperature difference between inlet and outlet as shown in (1), but if there is a difference as shown in (2), there is a possibility of inside clogged. In this case, replace Strainer.

## SERVICE PARTS INFORMATION 17

### Outdoor Unit Solenoid Valve (SV1, SV2, SV3)

#### Check Point 1 : Check connections

- ❑ Check connection of connector.  
(Loose connector or open cable)

#### Check Point 2 : Check Solenoid Coil

- ❑ Remove connector and check if coil is open.

| Solenoid Coil | Resistance value |
|---------------|------------------|
| SV1           | 1324Ω ±7%        |
| SV2, SV3      | 1495Ω ±7%        |

Resistance value 68°F(20°C)

>> **If Resistance value is abnormal, replace Solenoid Coil.**

#### Check Point 3 : Check Voltage from Main PCB

- ❑ Remove connector and check the voltage (AC208- 230V).

>> **If the voltage does not appear, replace Main PCB.**

#### Check Point 4-1 : Check opening & closing operation of SV1, SV2

- ❑ Depending on either during operation or protection control, check if Valve is operating normally.  
(When Valve opens, Inlet and Outlet temperature is raised.)

**Normal Operation**  
Pipe (In) TEMP. Normal,  
Pipe (Out) TEMP.Normal

**Protection Function (Refer to 2-6-1),  
Special Operation (Defrost, Oil recovery, Start-up)**  
Pipe (In) TEMP. Hi,  
Pipe (Out) TEMP. Hi

- ❑ If the valve closes by removing the connector of the valve which does not close, it is considered to be Main PCB failure. Replace Main PCB.

- ❑ If it does not close by removing connector, there is a possibility of (1) clogging by dirt, or (2) deformation by the heat at the time of Solenoid Valve installation. In this case, replace Solenoid Valve.

## Check Point 4-2 : Check operation of SV3

### □ Check the operation noise when the connector of SV3 is removed.

#### - When SV3 is open

The sound of operation noise is heard ----> Normal

The sound of operation noise is not heard. ----> Replace SV3

#### - When SV3 is closed

The sound of operation noise is heard ----> Replace Main PCB

The sound of operation noise is not heard. ----> Normal

**Comp. OFF**

or Discharge temp.  $\leq 50^{\circ}\text{F}(10^{\circ}\text{C})$

or Discharge temp. - High pressure saturated temp.  $< 41^{\circ}\text{F}(5^{\circ}\text{C})$

**Comp. ON**

and Discharge temp.  $> 50^{\circ}\text{F}(10^{\circ}\text{C})$

and Discharge temp. - High pressure saturated temp.  $\geq 46.4^{\circ}\text{F}(8^{\circ}\text{C})$

## SERVICE PARTS INFORMATION 18

### 4-WAY VALVE 1 (2) (3)

#### Check Point 1 : Check Circuit connection

- Check the connection of connector CN105 (CN156,158)

#### Check Point 2 : Check Solenoid Coil

- Remove CN105 (CN156,158) from PCB and check the resistance value of coil

**Resistance Value**  
 $2.085k\Omega \pm 10\%$   
 (4WV1, 4WV2)  
 $1.725k\Omega \pm 10\%$   
 (4WV3)

☆ If it is Open or abnormal resistance value,  
replace Solenoid Coil

#### Check Point 3: Check Operation of 4 Way Valve

- Check each piping temperature, and confirm the location of the valve by the temperature difference.

☆ If the valve location is not proper, replace 4 way valve.

#### Check Point 4: Check Voltage of Solenoid Coil

- If CN105 (CN156,158) of Control PCB dose not Show (AC208- 230V) during Heating operation (Compressor is in operation), replace Main PCB.

## SERVICE PARTS INFORMATION 19

### Indoor Unit AC Fan Motor

#### Check Point : ARXC36GATH (High Static Pressure Duct Type)

□ Check each winding resistance of the motor

► If Resistance value is abnormal, replace motor.

| Lead wire     | Resistance value                        |
|---------------|---|
| White – Red   | <b>13.4 <math>\Omega \pm 8\%</math></b> |
| Red – Black   | <b>16.9 <math>\Omega \pm 8\%</math></b> |
| Red – Violet  | <b>11.5 <math>\Omega \pm 8\%</math></b> |
| Violet – Blue | <b>13.3 <math>\Omega \pm 8\%</math></b> |

at 20°C

#### Check Point : ARXC45/ 60GATH (High Static Pressure Duct Type)

□ Check each winding resistance of the motor

► If Resistance value is abnormal, replace motor.

| Lead wire     | Resistance value                        |
|---------------|---|
| White – Red   | <b>6.84 <math>\Omega \pm 7\%</math></b> |
| Red – Black   | <b>9.78 <math>\Omega \pm 7\%</math></b> |
| Red – Violet  | <b>6.1 <math>\Omega \pm 7\%</math></b>  |
| Violet – Blue | <b>6.1 <math>\Omega \pm 7\%</math></b>  |

at 20°C

#### Check Point : ARXC72GATH (High Static Pressure Duct Type)

□ Check each winding resistance of the motor

► If Resistance value is abnormal, replace motor.

| Lead wire     | Resistance value                        |
|---------------|---|
| White – Red   | <b>5.25 <math>\Omega \pm 7\%</math></b> |
| Red – Black   | <b>5.02 <math>\Omega \pm 7\%</math></b> |
| Red – Pink    | <b>1.86 <math>\Omega \pm 7\%</math></b> |
| Pink – Violet | <b>0.94 <math>\Omega \pm 7\%</math></b> |
| Violet – Blue | <b>0.94 <math>\Omega \pm 7\%</math></b> |

at 20°C

#### Check Point : ARXC90GATH (High Static Pressure Duct Type)

□ Check each winding resistance of the motor

► If Resistance value is abnormal, replace motor.

| Lead wire     | Resistance value                        |
|---------------|---|
| White – Red   | <b>4.24 <math>\Omega \pm 7\%</math></b> |
| Red – Black   | <b>4.16 <math>\Omega \pm 7\%</math></b> |
| Red – Pink    | <b>0.46 <math>\Omega \pm 7\%</math></b> |
| Pink – Violet | <b>0.91 <math>\Omega \pm 7\%</math></b> |
| Violet – Blue | <b>0.46 <math>\Omega \pm 7\%</math></b> |

at 20°C

## SERVICE PARTS INFORMATION 20

### Indoor unit fan motor < DC motor >

⚠ When you approach this part, please cut off the power supply and wait for a while until DC voltage has been discharged.

#### Check Point 1 : Check rotation of Fan

- Rotate the fan by hand when operation is off.  
(Check if fan is caught, dropped off or locked motor)
- >>If Fan or Bearing is abnormal, replace it.**

#### Check Point 2 : Check resistance of Indoor Fan Motor

- Refer to below. Circuit-test "Vm" and "GND" terminal.  
(Vm: DC voltage, GND: Earth terminal)
- >>If they are short-circuited (below 300 k $\Omega$ ), replace Indoor fan motor**

| Pin number<br>(wire color) | Terminal function<br>(symbol) |
|----------------------------|-------------------------------|
| 1 (Brown or Blue )         | Feed back (FG)                |
| 2 (Yellow)                 | Speed command (Vsp)           |
| 3 (White)                  | Control voltage (Vcc)         |
| 4 (Black)                  | Earth terminal (GND)          |
| 5                          | No function                   |
| 6 (Red)                    | DC voltage (Vm)               |

## SERVICE PARTS INFORMATION 21

### Outdoor unit fan motor

⚠ When you approach this part, please cut off the power supply and wait for a while until DC voltage has been discharged.

#### Check Point 1 : Check rotation of Fan

- Rotate the fan by hand when operation is off.  
(Check if fan is caught, dropped off or locked motor)
- >>If Fan or Bearing is abnormal, replace it.**

#### Check Point 2 : Check resistance of Outdoor Fan Motor

- Refer to below. Circuit-test " Winding coil resistance U, V, W." and the Location sensor Circuit test
- >>If they are other resistance value, replace Outdoor fan motor.**

| Pin number<br>(wire color) | Terminal function<br>(symbol) |
|----------------------------|-------------------------------|
| U (Red ) - W (Black)       | 2.8 $\Omega$                  |
| V (white) - U (Red)        |                               |
| W (Black) - V (White)      |                               |
| 1 (Yellow) - 4 (Pink)      | 9.3 K $\Omega$                |
| 2 (Blue) - 4 (Pink)        |                               |
| 3 (Orange) - 4 (Pink)      |                               |
| 4 (Pink) - 5 (Gray)        | More than 1.2 K $\Omega$      |
| 1 or 2 or 3 - 5 (Gray)     | More than 10 K $\Omega$       |

## SERVICE PARTS INFORMATION 22

### Discharge Pressure Sensor Suction Pressure Sensor

#### 1. Discharge Pressure Sensor

Check Point : Check Voltage from Main PCB

- With the connector connected to the PCB, measure the voltage between CN118:2-3 of the Main PCB.

- Characteristics of pressure sensor

|            |      |      |      |      |      |      |       |       |       |       |       |       |       |       |       |
|------------|------|------|------|------|------|------|-------|-------|-------|-------|-------|-------|-------|-------|-------|
| psi        | 0.0  | 14.5 | 29.0 | 43.5 | 58.0 | 72.5 | 101.5 | 116.0 | 130.5 | 145.0 | 174.0 | 203.0 | 232.0 | 261.0 | 290.0 |
| MPa        | 0.00 | 0.10 | 0.20 | 0.30 | 0.40 | 0.50 | 0.70  | 0.80  | 0.90  | 1.00  | 1.20  | 1.40  | 1.60  | 1.80  | 2.00  |
| Output (V) | 0.50 | 0.58 | 0.66 | 0.74 | 0.82 | 0.90 | 1.06  | 1.14  | 1.22  | 1.30  | 1.46  | 1.62  | 1.78  | 1.94  | 2.10  |

|            |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |
|------------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|
| psi        | 319.0 | 348.0 | 377.0 | 406.0 | 435.0 | 464.0 | 493.0 | 522.0 | 551.0 | 580.0 | 609.0 | 638.0 | 667.0 | 696.0 | 725.0 |
| MPa        | 2.20  | 2.40  | 2.60  | 2.80  | 3.00  | 3.20  | 3.40  | 3.60  | 3.80  | 4.00  | 4.20  | 4.40  | 4.60  | 4.80  | 5.00  |
| Output (V) | 2.26  | 2.42  | 2.58  | 2.74  | 2.90  | 3.06  | 3.22  | 3.38  | 3.54  | 3.70  | 3.86  | 4.02  | 4.18  | 4.34  | 4.50  |

#### 2. Suction Pressure Sensor

Check Point : Check Voltage from Main PCB

- With the connector connected to the PCB, measure the voltage between CN119:2-3 of the Main PCB.

- Characteristics of pressure sensor

|            |      |      |      |      |      |      |       |       |       |       |       |       |       |       |       |
|------------|------|------|------|------|------|------|-------|-------|-------|-------|-------|-------|-------|-------|-------|
| psi        | 0.0  | 14.5 | 29.0 | 43.5 | 58.0 | 72.5 | 101.5 | 116.0 | 130.5 | 145.0 | 159.5 | 174.0 | 188.5 | 203.0 | 217.5 |
| MPa        | 0.00 | 0.10 | 0.20 | 0.30 | 0.40 | 0.50 | 0.70  | 0.80  | 0.90  | 1.00  | 1.10  | 1.20  | 1.30  | 1.40  | 1.50  |
| Output (V) | 0.50 | 0.68 | 0.85 | 1.03 | 1.21 | 1.38 | 1.74  | 1.91  | 2.09  | 2.27  | 2.44  | 2.62  | 2.79  | 2.97  | 3.15  |

|            |       |       |
|------------|-------|-------|
| psi        | 232.0 | 246.5 |
| Mpa        | 1.60  | 1.70  |
| Output (V) | 3.32  | 3.50  |

## SERVICE PARTS INFORMATION 23

### Pressure Switch

#### • Type of contact

#### • Characteristics of pressure switch

|                        |                            |
|------------------------|----------------------------|
| Contact : Short ⇒ Open | 4.2±0.1MPa (609±14.5 psi)  |
| Contact : Open ⇒ Short | 3.2±0.15MPa (464±21.8 psi) |

## SERVICE PARTS INFORMATION 24

### Thermistor

#### Check Point : Check Thermistor resistance value

□ Remove connector and check Thermistor resistance value.

| Temperature<br>[°F]    | Temperature<br>[°C] | Resistance Value [ kΩ ] / Voltage Value [V] |   |                  |                    |
|------------------------|---------------------|---|---|------------------|--------------------|
|                        |                     | Thermistor A                                | Thermistor B  | Thermistor C     | Thermistor D       |
| - 4                    | - 20                | --- / ---                                   | --- / ---   | 105.4 / 1.33     | --- / ---          |
| 14                     | - 10                | --- / ---                                   | 27.8 / 1.67   | 58.2 / 1.98      | 27.4 / 0.26        |
| 23                     | - 5                 | --- / ---                                   | 21.0 / 2.00   | 44.0 / 2.33      | 20.7 / 0.34        |
| 32                     | 0                   | 168.6 / 0.19                                | 16.1 / 2.33   | 33.6 / 2.66      | 15.8 / 0.43        |
| 41                     | 5                   | 129.8 / 0.24                                | 12.4 / 2.65   | 25.9 / 2.98      | 12.2 / 0.55        |
| 50                     | 10                  | 100.9 / 0.31                                | 9.6 / 2.96  | 20.2 / 3.27      | 9.5 / 0.68         |
| 59                     | 15                  | 79.1 / 0.39                                 | 7.6 / 3.25  | 15.8 / 3.54      | 7.5 / 0.84         |
| 68                     | 20                  | 62.5 / 0.48                                 | 6.0 / 3.50  | 12.5 / 3.77      | 5.9 / 1.01         |

## SYMBOL DESCRIPTION

### ● Outdoor unit

| MARK  | DESCRIPTION                                 |
|-------|---|
| CMP1  | Compressor 1 (Inverter type)                |
| HEX1  | Heat exchanger 1                            |
| HEX2  | Heat exchanger 2                            |
| FAN1  | Fan 1                                       |
| ACM   | Accumulator                                 |
| OS    | Oil separator                               |
| SCHEX | Sub-cool heat exchanger                     |
| HPS   | High pressure sensor                        |
| LPS   | Low pressure sensor                         |
| HPSW1 | High pressure sensor switch 1               |
| 4WV1  | 4-way valve 1                               |
| 4WV2  | 4-way valve 2                               |
| 4WV3  | 4-way valve 3                               |
| EEV1  | Electric expansion valve 1                  |
| EEV2  | Electric expansion valve 2                  |
| EEV3  | Electric expansion valve 3                  |
| SV1   | Solenoid valve 1                            |
| SV2   | Solenoid valve 2                            |
| SV3   | Solenoid valve 3                            |
| TH1   | Discharge temperature thermistor 1          |
| TH2   | Outdoor temperature thermistor              |
| TH3   | Suction temperature thermistor              |
| TH4   | Liquid temperature thermistor 1             |
| TH5   | Liquid temperature thermistor 2             |
| TH6   | Sub-cool heat exchanger (outlet) thermistor |
| TH7   | Heat exchanger 1 gas thermistor             |
| TH8   | Heat exchanger 2 gas thermistor             |
| TH9   | Heat exchanger 1 liquid thermistor          |
| TH10  | Heat exchanger 2 liquid thermistor          |
| TH11  | Compressor 1 temperature thermistor 1       |

| Marking color |
|---------------|
| BLUE          |
| —             |
| RED           |
| WHITE         |
| BROWN         |
| GREEN         |
| BLACK         |
| YELLOW        |
| PINK          |
| GRAY          |
| ORANGE        |

### ● Indoor unit

| MARK  | DESCRIPTION                        |
|-------|------------------------------------|
| HEX21 | Heat exchanger                     |
| FAN21 | Fan                                |
| EEV21 | Electric expansion valve           |
| TH21  | Room temperature thermistor        |
| TH22  | Heat exchanger (inlet) thermistor  |
| TH24  | Heat exchanger (outlet) thermistor |

| 4.1                             | 63.99                       | 64.38         |

5-3-3 Temperature and pressure of refrigerant (Graph)

## 6. DISASSEMBLY PROCESS

## 6. DISASSEMBLY / ASSEMBLY PROCESS

### 6.1 Indoor Unit

#### ⚠ CAUTION

Before servicing the unit, turn the power supply switch OFF,  
When you approach PWB, be sure to equip with the electrostatic removal band.  
(PWB may be broken by static electricity.)

#### 1. Indoor unit Transmisson PCB removal

1. Disconnect the connector of transmisson wire form the **Terminal - board side**.
2. Hold the PCB's both end of touchable area mentioned on the left figure.
3. Pull up the PCB one side and another side step by step.  
(Do not deform the pins on the controller PCB)

#### 2. Indoor unit Transmisson PCB install

1. Before installing transmission PCB on to the Main PCB, confirm the connector of transmisson wire was connected on the Transmission PCB.
2. Hold the PCB's both end of touchable area and adjust the position of transmission PCB based on the position of spacers on the Main PCB. ( Do not attach the transmission PCB wrong position.)  
\*When the connection of transmission PCB and the Main PCB was wrong, the both of PCB might be broken after power supply on.
3. After adjusting the position of PCB, attach the PCB to the Main PCB.

Correct position

Incorrect position

| SET1-1 | SET1-2 | SET1-3 | SET1-4 | SET2-1 | Indoor unit capacity |
|--------|--------|--------|--------|--------|----------------------|
| OFF    | OFF    | OFF    | OFF    | OFF    | 2.2kW                |
| ON     | OFF    | OFF    | OFF    | OFF    | 2.8kW                |
| OFF    | ON     | OFF    | OFF    | OFF    | 3.6kW                |
| ON     | ON     | OFF    | OFF    | OFF    | 4.0kW                |
| OFF    | OFF    | ON     | OFF    | OFF    | 4.5kW                |
| ON     | OFF    | ON     | OFF    | OFF    | 5.6kW                |
| OFF    | ON     | ON     | OFF    | OFF    | 7.1kW                |
| ON     | ON     | ON     | OFF    | OFF    | 8.0kW                |
| OFF    | OFF    | OFF    | ON     | OFF    | 9.0kW                |
| ON     | OFF    | OFF    | ON     | OFF    | 11.2kW               |
| OFF    | ON     | OFF    | ON     | OFF    | 12.5kW               |
| ON     | ON     | OFF    | ON     | OFF    | 14.0kW               |
| OFF    | OFF    | ON     | ON     | OFF    | 18.0kW               |
| ON     | OFF    | ON     | ON     | OFF    | 22.4kW               |
| OFF    | ON     | ON     | ON     | OFF    | 25.0kW               |
| ON     | ON     | ON     | ON     | OFF    | 28.0kW               |

When you need to replace the transmission PCB to new one, set the DIP-SW setting as same as the previous PCB'S setting.

## 6.2 Outdoor Unit

### ⚠ WARNING

Before servicing the unit, turn the power supply switch OFF,  
Then, do not touch electric parts for 10 minutes due to the risk of electric shock.

### 1. Appearance

Model : AJY072/ 090LALBH

### 2. PANEL TOP removal

Remove the 4 mounting screws.

Remove the PANEL TOP  
by sliding toward.

Hook (3 places)

### 3. CONTROL BOX COVER removal

Remove the 4 mounting screws.

Remove the CONTROL BOX COVER  
by sliding toward.

4. Layout plan in CONTROL BOX

[Reference Data]  
Model : AJY108/ 126/ 144/ 162LALBH

## 5. Screw tightening torque

[Reference Data]

Model : AJY108/ 126/ 144/ 162LALBH

## 6. Main PCB removal

### ⚠ CAUTION

The model name is written in Main PCB of the outdoor unit and indoor unit, and when the factory of the product is shipped, it is written. However, the model name is not written in the Main PCB supplied for the repair. When the following function is made to work, the written model name is needed.

1. Display of system list display in service tool or system controller
2. Display of refrigerant circuit diagram in service tool.
3. When you use the electricity charge calculation function as system controller or touch panel controller.

If the model name is not written, the trouble such as the refrigerant circuit diagram is not displayed or the electricity charge calculation is not done accurately might occur.

Therefore, please register the model name to each controller who uses it when you exchange Main PCB by the repair.

1. Model name registration to service tool  
Please register the model name with the system list template files.  
(Please see the operation manual of the service tool for details)
2. Model name registration to system controller  
Please register the model name by the electricity charge calculation setting.  
(Please see the operation manual of the system controller for details)

7. Inverter PCB removal

AJ\*072/ 090LALBH, AJ\*072/ 090LATBH

Inverter PCB

Screws  
(For INV comp.)

Remove the 3 mounting screws and codes.

Screws  
(For capacitor)

Remove the 2 mounting screws and codes.

Screws  
(For IPM)

Remove the 2 mounting screws.  
Note the tightening torque at the installation.  
Tightening torque is as follows.  
- Temporary tightening :  $0.3 \pm 0.2\text{N}\cdot\text{m}$   
- Final tightening :  $2.7 \pm 0.2\text{N}\cdot\text{m}$

Screws  
(For Magnetic relay)

Remove the mounting screw and code.

Spacers  
(5 places)

Remove the connectors and spacers.

IPM

Spread the heat dissipation compound on the other side of IPM when you exchange Inverter PCB by the repair.

Compound

| Parts Name       | Service Parts No. |
|------------------|-------------------|
| HEAT SINKER(20g) | 0000036795        |

| Compound         |                   |
|------------------|-------------------|
| Parts Name       | Service Parts No. |
| HEAT SINKER(20g) | 0000036795        |

Spread the heat dissipation compound on the other side of IPM when you exchange Inverter PCB by the repair.

## 8. Fan driver PCB removal

Remove the connectors.

Remove the 2 mounting screws and the spacers.

Note the tightening torque at the installation.  
Tightening torque is as follows.

- Temporary tightening :  $0.3 \pm 0.1\text{N}\cdot\text{m}$
- Final tightening :  $1.3 \pm 0.1\text{N}\cdot\text{m}$

Heat sink M (AJY072/ 090)  
Heat sink L (AJY108/ 126/ 144/ 162)

Heat sink K

IPM

- Spread the heat dissipation compound on the other side of IPM when you exchange Fan driver PCB by the repair.
- Spread the heat dissipation compound without a gap between the Heat sink K and Heat sink M or L.

### Compound

| Parts Name       | Service Parts No. |
|------------------|-------------------|
| HEAT SINKER(20g) | 0000036795        |

## 9. PANEL BTM removal

Remove the 7 mounting screws.

Remove the PANEL BTM by sliding toward.

## 10. Control Box open

Remove the 2 mounting screws.

Loose or remove the cable ties. (3 places)

Remove the locking stopper of edging saddle.(3 places)

Remove the wires from edging saddle. (3 places)

Remove the Wire plate by sliding rightward.

Remove the 6 mounting screws.

Open the Control Box with handle.

## 11. THERMISTORS removal

Cut the cable tie.

Remove the heat insulation.

Remove the thermo spring and thermistor.

## 12. SOLENOID COILS (4way valve and Solenoid valves) removal

Remove the mounting screw.

Remove the SOLENOID COIL.

## 13. EEV COILS removal

Remove the EEV coil by hand.  
There are two coils.

## 14. PRESSURE SENSORS removal

Remove the PRESSURE SENSOR  
with wrench.  
There are two sensors.  
(High and Low pressure)  
Note the tightening torque at the installation.  
Tightening torque is  $15 \pm 1.5 \text{ N}\cdot\text{m}$ .

## 15. Fan motor removal

Remove the Fan Guard.

Remove the nut.

Note the tightening torque at the installation.  
Tightening torque is from 15 to 20N·m.

Remove the Propeller fan.

Note at the installation.  
Insert propeller fan and motor shaft reference  
D cutting position.

Cut the cable tie.

Remove the 4 mounting screws.  
Remove the Fan motor.

## 16. Comp box cover removal

Loose the 2 mounting screws.  
Remove the 2 mounting screws.

Remove the Comp box cover  
by sliding leftward and toward.

## 17. Compressor removal

### Precautions for exchange of Compressor.

Do not allow moisture or debris to get inside refrigerant pipes during work.

### Procedure for compressor removal.

- (1) Turn off power.
  - (2) Remove the Panel top and Panel btm.
  - (3) Remove the Control Box.
  - (4) Fully close the 3-way valve (Gas) and (Liquid).
  - (5) Collect the refrigerant from the service port.
- Start the following work after completely collecting the refrigerant.  
Do not reuse the refrigerant that has been collected.

Remove the 4 mounting screws.  
Remove the Center beam.

Loose or remove the cable ties.  
(4 places)

Remove the 7 mounting screws.

Remove the Comp Box(Top)  
by sliding toward.

Remove the 4 mounting screws.

Remove the Comp Box(L)  
by sliding toward.

Remove the 4 mounting screws.

Remove the Comp Box(R)  
by sliding toward.

Comp.cover  
(Top)  
Color: White&  
Green

Comp. cover  
(Body)  
Color: White

Comp. cover  
(Accumulator)  
Color: white

Comp. cover  
(Outside)  
Color: Green

Remove the Compressor cover (Top).

Note :  
Compressor cover (Top) consists of 2 parts.  
The inside of the Comp.cover is white, and  
the outside of Comp.cover is green.

Remove the Compressor cover (Outside),  
Compressor cover (Accumulator), and  
Compressor cover (Body).

Remove the Terminal Cover.

Remove the 3 mounting screws of Terminal.

[U: Red, V: White, W: Black]

Note the tightening torque at the installation.  
Tightening torque is 2.0 ~2.5N·m.

Discharge temp. thermistor  
(TH1)

Compressor shell temp. thermistor  
(TH11)

Remove the Discharge temp. thermistor  
and Compressor shell temp. thermistor.

Remove the Comp Bolts.  
(4 places)

Hook (2 places)

Crank Case Heater  
(2 places)

Remove the Crank Case Heaters.

Note the tightening torque at the installation.  
Crank Case Heater should not overlap each other.

Cut the Discharge pipe in this range.

Cut the Suction pipe in this range.  
Remove the Compressor.

**Caution**

- Keep their shape better.
- There is a possibility of catching fire to oil when removing by the welding without cutting it.

**Procedure for compressor installation.**

Reverse procedure to removing the compressor.

**Precautions for installation of Compressor.**

- (1) When brazing, do not apply the flame to the terminal.
- (2) When brazing, be sure to replace the air in the pipe with nitrogen gas to prevent forming oxidization scale.

## 18. Precautions for when replacing refrigerant-cycle-parts

- (1) During replacement of the following parts shall be protected by wet rag and not make the allowable temperature or more.
- (2) Remove the heat insulation when there is the heat insulation near the welding place.  
Move and cool it when its detaching is difficult.
- (3) Cool the parts when there are parts where heat might be transmitted besides the replacement part.
- (4) Interrupt the flame with the fire-retardant board when the flame seems to hit the following parts directly.
- (5) Do not allow moisture or debris to get inside refrigerant pipes during work.
- (6) When brazing, be sure to replace the air in the pipe with nitrogen gas to prevent forming oxidization scale.

| Part name               | Allowable temperature | Precautions in work  |
|-------------------------|-----------------------|--|
| Solenoid Valve 1 /2 /3  | 200°C                 | Remove the coil before brazing.<br>And install the coil after brazing.                                 |
| Expansion Valve 1 /2 /3 | 120°C                 | Remove the coil before brazing.<br>And install the coil after brazing.                                 |
| 4-way Valve 1 /2 /3     |                       | Remove the suction temp. sensor before brazing.<br>And install the suction temp. sensor after brazing. |
| Check Valve             |                       |  |
| 3-way Valve (Gas)       | 100°C                 |  |
| 3-way Valve (Liquid)    |                       |  |
| Union Joint             |                       | Remove the pressure sensor before brazing.<br>And install the pressure sensor after brazing.           |
| High pressure sensor    |                       | Tighten the flare part gripping it.<br>(Tightening torque :15±1.5N·m)                                  |
| Low pressure sensor     |                       | Do the static electricity measures.  |
| Pressure switch         |                       |  |
